DART ALUMINIUM BLOCKS - SMALL BLOCK CHEV

We applied our years of experience in manufacturing aluminium cylinder heads to create the ultimate aluminium small-block. At 43kg total weight, the Dart aluminium small-block is light, strong, and affordable. With displacements up to 455 cubic inches, the Dart aluminium block is ideal for sprint cars, Modifieds, late-model stock cars, dragsters, and unlimited competition classes. • Cast from virgin 355-T6 aerospace alloy

- Siamesed cylinder bores • Cylinders can be safely bored to 4.185"
- Relocated oil pan rails are spread .400" per side
- Steel four-bolt main caps on all 5 mains • Two-piece rear main seal fits standard racing crankshafts • Raised camshaft provides more clearance for stroker cranks • Big-block camshaft bearings
- Dual starter mounts allow starter to be mounted on either side
- Side and front engine mounts

DART ALUMINIUM BLOCKS - SMALL BLOCK FORD

The Dart aluminium small-block is light, strong, and affordable. With displacements up to 450 cubic inches, the Dart aluminium block is ideal for sprint cars, Modifieds, late-model stock cars, dragsters, and unlimited competition classes. With pressed in dry sleeves, upgraded oiling and steel 4-bolt main caps, Dart's aluminium blocks have the features that Ford racers need to build powerful and reliable engines. • Cast from virgin 355-T6 aerospace alloy

- Siamesed cylinder bores • Cylinders can be safely bored to 4.165"
- Four deck heights available • Steel four-bolt main caps on all 5 mains • Two main bearing diameters: 302W or 351C
- Upgraded priority main oiling system • Reinforced, blind tapped head bolt bosses • Standard camshaft and camshaft drive can be used • Compatible with stock components

DART LITTLE M2 BLOCKS

True race block which will work with most standard components. Provisions for wet or dry sump oiling systems. Great for power adders and maximum effort engines. The Dart Little M2 is designed from the ground up as a true racing engine block which can be used with standard off the shelf small block components. The Little M2 is cast from premium high strength iron and beveled up in all the critical areas. A competition oiling system ensures adequate lubrication to the main bearings at high RPM.

- Uses standard small block parts, including cam, oil pump, oil pan, oil filter, motor mounts, mechanical fuel pump, and clutch linkage.
- Priority main oiling system feeds main bearings first.
- Centre lifter oil crossover for improved lifter oiling.
- Siamese cylinder bores with extra thick walls resist cracking and improve ring seal for more power (minimum .275" thick with 4.185" bore).
- Open lifter valley improves oil return to pan.
- Enlarged lifter bosses accommodate offset and oversize lifters.
- Blind head bolt holes don't go through to water jacket.
- Billet steel 4-bolt main bearing caps on all 5 mains.
- Standard oil pan rail width
- Oil gallery holes machined for O-ring plugs.
- Parts kit included

DART LITTLE M2

Dart's Little M Sportsman block is the affordable alternative for Sportsman racers and serious street performance. The Sportsman block shares most of the Little M's best features, but saves you money by using Ductile iron main bearing caps (4-bolt on the centre three and 2-bolt on the ends), and employing a rear external oil feed, crossover and restrictor provision.

- Uses standard small block parts, including cam, timing chain, oil pump, oil pan, oil filter, motor mounts, mechanical fuel pump, and clutch linkage.
- Priority main oiling system feeds the main bearings first.
- Siamese cylinder bores with extra thick walls resist cracking and improve ring seal for more power (minimum .275" thick with 4.185" bore).
- Scalloped water jacket walls improve flow around cylinders for better cooling.
- Open lifter valley improves oil return to pan.
- Enlarged lifter bosses accommodate offset and oversize lifters.
- Blind head bolt holes don't go through to water jacket.
- Splayed outer bolts on middle main bearing caps.
- Rear external oil feed, crossover and restrictor provision.
- Parts kit sold separately (PN 32000001)

DART BIG M2 BLOCKS

Dart engineered the Big M to be the strongest, most reliable, and easiest to build big block on the market. The Dart Big M2 is designed from the ground up as a true racing engine block which can be used with standard off the shelf big block components. The Big M2 is cast from premium high strength Iron and beveled up in all the critical areas. A competition oiling system ensures adequate lubrication to the main bearings at high RPM.

- Standard 9.800", 10.200" and 10.400" deck heights
- Standard 4.250", 4.500", 4.560", or 4.600" bore sizes with Siamese extra thick cylinder walls to resist cracking and improve ring seal (minimum .300" thick with 4.625" bore)
- Available in .400" raised cam
- Uses +.300" tall GEN VI style lifters. Modified cation for MRK IV style available
- 4-bolt main bearing caps in steel or ductile iron have splayed outer bolts for extra strength
- Lifter valley head stud bosses help prevent blown head gaskets
- Easy to install AN fitting oil gallery plugs

DART BIG M2 SPORTSMAN BLOCKS

Dart engineered the Big M to be the strongest, most reliable, and easiest to build big block on the market. With deck heights of 9.800" and 10.200" and bore sizes up to 4.600", the Big M gives you the versatility to build a wide variety of engine combinations. The Big M is fitted with Billet Steel 4-bolt main caps for ultimate bottom end strength. The Sportsman block is fitted with Ductile Iron 4-bolt main caps.

- Standard 9.800" and tall 10.200" deck heights.
- Standard 4.250", 4.500", 4.560" or 4.600" bore sizes with siamesed extra thick cylinder walls to resist cracking and improve ring seal (minimum .300" thick with 4.625" bore).
- Uses +.300" tall Gen VI style lifters. Modification for Gen IV style available.
- 4-bolt main bearing caps in Ductile Iron have splayed outer bolts for extra strength.
- True priority main oil system lubricates the main bearings before the lifters. Our stepped main oil gallery (9/16" to 1/2" to 7/16") increases the flow of oil to the crank at high RPM, and our front oil crossover eliminates internal oil leaks around the distributor shaft.
- Lifter valley head stud bosses prevent blown head gaskets.
- Dual oil pan bolt patterns fit standard and notched oil pans.
- Big M Sportsman: Parts kit sold separately.
- Big M: Parts kit included.

DART RACE SERIES TALL-DECK IRON BLOCKS - BIG BLOCK CHEV

The Dart Race Series block offers crank-to-deck dimensions of 10.600 and 11.100 inches - nearly one inch taller than the factory truck block - and can accommodate displacements of up to 763 cubic inches. The camshaft is raised .600-inch above the stock location and the main oil gallery is located alongside the camshaft tunnel to eliminate interference with the crank assembly. The oil pan rails are spread to increase clearance for the connecting rods and crankshaft counterweights.

- Siamesed cylinder bores • True priority main oiling system
- Raised cam location • Five deck heights • Steel four-bolt main caps • Crankshaft tunnel clearanced for 5.500" stroke cranks
- Lifter valley head stud bosses • Dual oil pan bolt patterns

DART BIG M ALUMINIUM BLOCKS - BIG BLOCK CHEV

Dart aluminium big-block V-8s deliver big power in a lightweight package. Based on the Chevrolet big-block V8 design, these new aluminium blocks feature extra strengthening in critical areas, increased displacement capacity, true priority main oiling and precision CNC machining. Conventional configuration that retains all production dimensions for compatibility with standard components. Advanced engineering makes Dart aluminium big-blocks the choice for serious competition.

- 355-T6 premium alloy • Ductile iron sleeves • Reinforcing ribs
- Steel four-bolt main caps • Three bore sizes
- 9.800" or 10.200" deck heights • Priority main oiling system
- Dual oil pan bolt patterns

DART LS NEXT BLOCK

Dart's LS Next block is the first significant change in the architecture of the LS engine platform. By eliminating the "Y-block" design and utilizing conventional style main caps and oil pans, Dart has addressed the problems resulting from the LS engine's separated crankcase bays. Windage is greatly reduced, resulting in increased power along with a much stronger main web area.

Features:

- Dart's LS Next block is cast in the USA with premium cast iron alloy • Conventional style 4-bolt steel main caps with 7/16" bolts are used • Full main webbing for maximum bottom end strength
- Cylinder barrels are extended by .375" at the bottom, providing greater piston support for all combinations
- 9.240" deck height, with options of 9.450" are available which allows for a possible effective barrel length of 9.825" deck block
- Extra thick Siamese cylinder bores allow for large displacement capacity, and a max bore size of at least 4.200"
- A 5/8" thick full deck design with a 9.240" deck height
- Six head bolts per cylinder provide secure clamping for power adder applications
- Head bolts are upgraded to 7/16" for increased strength
- Blind head bolt holes don't go through into the water jacket
- Provision for oil restrictors in the lifter valley
- Revised low restriction priority main oiling system
- Pro-Stock / Pro-Mod big block style stepped main oil galley
- An external oil filter must be used with stock or aftermarket oil pumps • Dual starter mounts
- The water jacket on the #1 cylinder has been expanded for additional cooling capacity
- LSX style lifter bosses and dog bone provision are provided
- Moroso oil pan suit DART LS NEXT BLOCK #MO20144
- Oil pick up suit DART LS NEXT BLOCK #MO24144

DART LS NEXT

SERIES 2 BLOCK

The ultimate upgrade for adding strength in the Aluminium or Iron LS Next platform is the LS NEXT 2 upgrade. This offers larger Billet Steel main caps using Ford (2.750") or LS (2.560") mains, that feature 1/2" main studs giving superior clamping force for even higher power levels. Blocks come machined to accept fully counterweighted crankshafts.

- 1/2" main studs.
- 9.240"- 9.450" deck height with standard cam.
- 9.450"- 9.950" deck height with .388" raised cam.
- Available in Iron or Aluminium blocks with LS (2.560") or Ford (2.750") main sizes for improved crankshaft stability.
- Larger 4 bolt Billet Steel main caps.

Part No.	Description
DA31837211-S2	4.125" Bore, 9.240" Deck, 2.560" LS Main with 1/2" Studs

DART SHP LS NEXT

PRO BLOCKS (SKIRTED)

Designed for high performance and heavy-duty applications, the SHP LS Next PRO is the NEXT-LEVEL PERFORMANCE block for hot rodders, drag racers, circle track competitors, off-roaders, and high-performance marine enthusiasts.

- Superior strength 220 BHN Cast Iron.
- Steel 4-bolt main caps with upgraded ARP main studs.
- Lifter oil crossover with restrictor provision.
- 6-bolt per cylinder capability. • 4.000" up to 4.185" bore.
- Factory oil filter provision. • Parts kit included
- Cleared for center counterweighted crankshafts.
- Full skirt design. • Priority main oiling. • Siamese cylinder bores.
- Thick decks ensure reliable head gasket seal.

DART SHP LS NEXT BLOCK

- Dart priority main oiling system with provisions for stock oil filter mounting.
- Siamesed cylinder bores with thick walls.
- Cylinder barrels extended .375" at the bottom of the bores.
- Thick decks ensure reliable head gasket seal.
- Blind head bolt holes.
- 6 bolt per cylinder capability.
- Scalloped water jackets increase flow around cylinders for better cooling.
- Cleared up to 4.100" stroke w/ steel rods.
- Splayed outer bolts on middle main bearing caps.
- Provisions for LSX roller lifters and cam.
- Uses OE front and rear covers.
- All OE bolt holes for starter, water pump, etc.
- Parts kit sold separately: DA32000018

SLEEVES

Darton Sleeves BY SPECIAL ORDER

Darton has been manufacturing precision performance sleeves since 1978. Darton sleeves are made from centrifugally cast ductile iron material that is more abrasion resistant and harder on the surface than any other product available. This feature provides for good oil retention, ring seal, and the ultimate in leak down performance. Sold as complete sets of 4 or 6 sleeves.

Application	Bore	OD	Part No.

Outer R/H Cylinder 2, 7	RHS549111-1

MAIN CAPS

MILODON

4-BOLT MAIN CAPS

Milodon main caps are precision machined from high strength ductile material which has the proper balance of strength yet is not too rigid to allow transfer of increased shock loads to the crank and bearings. Only .030" of material removal is required for installation, which will allow 100% cleanup on a damaged block. If the block has square main registers, it will only need a standard align bore to finish the job. Milling the mains is only necessary if the main cap registers are not square.

- Angled outer bolts increase strength
- Supplied with all necessary hardware
- Drill fixture included for outer bolts

MAIN STUD GIRDLES

ALLOY MAIN STUD GIRDLE

With a superior strength-to-weight ratio 6061 T6 aluminium is more expensive than steel but much more effective at dampening harmonics, which is the leading cause of main cap walk and block failure. The lightweight 3/4" thick Main Stud Girdle evenly distributes load and dampens harmonics by bolting the main cap studs together to create a super strong rectangular cage. The brace nearly doubles the main web support area in the engine. The added strength and rigidity assists to eliminate main cap "walk" or movement. Securing the loose end of the main studs provides stability unequalled even by a 4-bolt main block. Additionally, a production 2 bolt strengthened with a main stud girdle is an economical alternative to an expensive 4-bolt aftermarket block or steel cap conversion.

PT-347MSG	Main stud girdle Windsor 302 (Use ARP Studs AR154-5408)
PT-355MSG	Main stud girdle Holden V8 (Use ARP Studs AR134-5401)
PT-393MSG	Main stud girdle 351C (Use ARP Studs AR154-5403)

Main Stud Girdles

FORD 289-302W MAIN CAP GIRDLE

The Moroso main cap girdle is manufactured from 1/2" thick steel and is profiled to fit over engine main caps without the need for spacers. It works with any standard Melling M68 or M68HV oil pump and is supplied with all necessary hardware.

Main Cap Girdle, 289 -302W M022928

REAR SEAL ADAPTERS - CHEV SMALL BLOCK

These rear main seal adaptors convert a 1986-on Small Block Chev to accept the early style, 2 piece rear main seal allowing the use of early style crankshafts in the later style block. They are available for use with either the new style oil pan (1986 and newer blocks with one-piece rear seal), or the old style oil pan (pre-1980 blocks with driver-side dipstick)

- Manufactured from billet aluminum
- Includes fasteners

Description

Early Crank to Late Block with Late Pan
Early Crank to Late Block with Early Pan

Part No.	M038315
	M038415

REAR SEAL ADAPTER - CHEV BIG BLOCK

Enables the use of early style Mark IV 2-piece rear seal crankshafts in the Mark V & VI 1-piece rear seal blocks.

- Includes fasteners • Must use late style oil pan.

Description

Chev Big Block Crankshaft Adapter

Part No.	EAC-EAG500
----------	------------

ROLLER PILOT BEARING

This high speed bearing is designed as a direct replacement in all Chevrolet V8's and 90° V6's and requires no modification to either crank or input shafts. Packed with high temperature grease for proper lubrication under extreme high heat conditions. Suitable for all high performance applications including drag, oval track/road race and street. 1.093" O.D. x .591" I.D. x .72" Depth.

Fuel Pump Block Off - Chev BB PI839034

ENGINE FINISHING KIT

It's easy to overlook the small details. For engine builders focused on the larger components, the small parts are often forgotten until the final stages of engine assembly. That is why AeroFlow has this range of engine hardware finishing kits. These kits include all of the necessary hardware and components needed to complete a rebuild such as dowel pins, cam bolts, woodruff keys and cam eccentrics. All these parts are crucial to properly assembling your engine. Available for small and big block Chevrolet and Ford engines, as well as Chrysler engines.

AF96-9080 Small Block Chev
AF96-9081 Big Block Chev
AF96-9082 Small Block Ford
AF96-9083 Big Block Ford
AF96-9084 Small Block Chrysler

GM LS SERIES WELSH PLUG KIT

The AeroFlow Performance LS series welsh plug kit includes all brass welch plugs required, including a new barbell which is made from 6061 aluminium. The new hi-flow billet barbell replaces the factory plastic barbell which can become brittle and fatigue over time.

AF64-2125 Complete welsh plug kit with barbell
AF64-2132 Replacement billet barbell ONLY

CRANKSHAFT KEY

The AeroFlow Performance crankshaft keys are designed to locate the crank sprocket on the nose of the crankshaft.

They are a perfect replacement for a worn key. Having worn crankshaft keys can result in timing gear to dampener positioning being incorrect which can cause your timing to be off and inconsistent. These woodruff keys are manufactured to OEM specifications for quality and dimensions to ensure a proper fit. Whether you had a key go missing or you just want the peace of mind of a new one in its place, these are the perfect solution when rebuilding an engine.

AF96-9009 GM LS Long Single

WELSH PLUG KITS

These AeroFlow Performance welsh plug kits are designed for sealing up the casting core holes in your engine block. The expansion plugs help protect against cracks caused by the pressure of frozen coolant and in regular operation will ensure that all vital fluids stay in the engine, where they belong. These complete engine block freeze plug kits include brass Welch plugs and steel oil gallery plugs but do not include cylinder head plugs. Each kit is specifically designed to suit each make and model with all correct sizes included for when you are rebuilding your engine.

AF3000-1009 Toyota 1JZ and 2JZ
AF3000-1010 Mitsubishi 4G63

LS MAIN CAP REMOVER TOOL

Slowly put down the rubber mallet and do the job the right way. LS main caps have very tight tolerances, and cannot be removed by simply grabbing and pulling on them. Uniform pressure from both sides is the only way to do this correctly. This handy tool seats itself on the engine block, and by using a mechanical advantage easily pulls the main caps upward evenly...making a challenging job easy. Heavy-duty construction, and beautifully engineered for years of use. Sold individually.

• Pro Series Model • Fits GM LS Engines • Made of Billet Aluminium • Black Anodized Finished • Evenly Pulls Upward on Main Cap
PR67485

LS RELUCTOR INSTALLATION TOOL

The Goodson reluctor installation tool is required to properly index and install the reluctor on LS crankshafts. Works with OEM and aftermarket billet reluctors.

Description **Part Number**
Reluctor Installation Tool **CARRJ-350**

BILLET LS RELUCTORS

These billet LS crank reluctors replace the inconsistent factory reluctors which are prone to slipping on the crank.

Description **Part Number**
24 Tooth Billet Reluctor **CA12559353-1**
58 Tooth Billet Reluctor **CA12586768-1**

PLASTIGAGE

Made from a special extruded plastic thread with accurately controlled crush properties, Sealed Power Plastigage provides a fast and accurate way to check bearing clearances. Plastigage is packaged in a calibrated envelope that not only protects the plastic threads, but also serves as a scale to measure the bearing clearance. One package contains enough Plastigage to check both main and connecting rod clearance for one engine.

Description **Part No.**
Green Strip Plastigage, .001 to .003 **SPG-1**
Red Strip Plastigage, .002 to .006 **SPR-1**

TriMetal Adds A New Layer!

The exclusive Clevite 77® TriArmor™ engine bearings feature the industry's only moly/graphite treatment. This sophisticated blend, in a low friction PTFE polymer base, offers extraordinary protection and lubricity. Enhanced wear characteristics increase bearing life in race engines and high performance street engines. Now, high performance engine builders can enjoy the strength & durability of the legendary Clevite 77® TriMetal™ bearing construction coupled with the latest in coating technology right out of the box. Count on Clevite to be the first — with the best!

- Reduced friction and drag, resulting in increased horsepower
- Protection during start-up
- Embedability to resist damage from debris
- Ability to withstand extreme temperatures and pressures
- Conformability for distressed or imperfect surfaces
- Extraordinary strength and durability

Triarmor bearings are available with .001" extra clearance by adding X to the part number after the H, eg: CLCB663HXK STD.

ACL RACE SERIES BEARINGS

The unique combination of design, metallurgy and engineering come together to deliver what drivers expect from high performance Trimetal engine bearings. Designed to withstand higher RPM conditions, ACL Race Series Engine Bearings are available for many of the popular 4, 6 & 8 cylinder applications. To order, select the base part number listed below and add the undersize required.

ROTATING ASSEMBLIES

SCAT ROTATING ASSEMBLYS - 9000 SERIES

The Scat 9000 series rotating assembly kits are a perfect foundation for a tough street engine. They include a Scat cast crank, Scat forged I-beam or H-beam rods and forged pistons.

CHEV BIG BLOCK

These kits fit standard deck Chev big blocks. Part numbers 91360 and 91610 suit early blocks with the 2-piece rear main seal and 91650 suits late model blocks with the 1-piece rear main seal.

Part No	CID	Bore x Stroke	Piston	118cc	124cc
SC1-91360-1	489	4.280" x 4.25"	Flat	9.0:1	8.6:1
SC1-91610-1	489	4.280" x 4.25"	Dome	10.2:1	9.7:1

CHEV LS2 & LSX - 24 TOOTH RELUCTOR

Part No	CID	Bore x Stroke	Piston	64cc	70cc
SC1-44004BI	408	4.030" x 4.000"	Flat -3cc	11.4	11.2
SC1-44005BI	408	4.030" x 4.000"	Dish -10cc	10.6	10.4

FORD 289-302 WINDSOR

These kits fit Ford 289-302 Windsor engines. They use 5.4" rods and are designed for external balance with a 28oz balancer and flywheel.

Part No	CID	Bore x Stroke	Piston	58cc	70cc
SC1-94170-1	347	4.030" x 3.40"	Flat	11.0:1	9.6:1

FORD 351 WINDSOR

These kits fit Ford 351 Windsor engines with the stock 3.00" mains. They are designed for external balance with a 28oz balancer and flywheel.

Part No	CID	Bore x Stroke	Piston	58cc	70cc
SC1-94260-1	393	4.030" x 3.85"	Dish	11.3:1	10.4:1
SC1-94310-1	408	4.030" x 4.00"	Flat	12.6:1	10.7:1
SC1-94360-1	408	4.030" x 4.00"	Dish	10.7:1	9.4:1

FORD 351 CLEVELAND

These kits fit Ford 351 Cleveland engines and aftermarket Windsor style blocks with the Cleveland deck and mains. They are designed for external balance with a 28oz balancer and flywheel.

Part No	CID	Bore x Stroke	Piston	64cc	70cc
SC1-94272-1	408	4.030" x 4.00"	Dish	9.8:1	9.4:1

FORD 429-460

These kits fit Ford 429 & 460 big blocks. They include 6.70" H-beam rods and are designed for external balance.

Part No	CID	Bore x Stroke	Piston	72cc	84cc
SC1-95010-1	545	4.390" x 4.50"	Flat	11.5:1	10.4:1
SC1-95105-1	545	4.390" x 4.50"	Flat	13.7:1	12.2:1
SC1-95120-1	557	4.440" x 4.50"	Flat	10.3:1	9.0:1

FORD 239 FLATHEAD

These kits are for Ford V8 flatheads with the 239 main size. They include H-beam rods and are designed for internal balance.

Part No	CID	Bore x Stroke	Piston	64cc
SC1-94600BI	274	3.3125" x 4.000"	Flat	9.4:1

FORD 239 FLATHEAD LATE BLOCK - 1949-1953

Part No	CID	Bore x Stroke	Piston	74cc
SC1-94613BI	274	3.3125" x 4.000"	Dome 0.187cc	9.4:1
SC1-94614BI	286	3.3125" x 4.125"	Dome 0.187cc	9.7:1

SCAT ROTATING ASSEMBLYS - 4000 SERIES

The Scat 4000 series rotating assembly kits are a perfect foundation for a tough street or race engine. They include a Scat 4340 forged crank, Scat forged H-beam rods and forged pistons.

CHEV LS1, LS2 & LS6 - 24 Tooth Reluctor

These kits suit LS1, LS2 & LS6 engines with the 24 tooth reluctor. They include crank, rods, pistons, rings and bearings.

Part No	CID	Bore x Stroke	Piston	66cc	72cc
SC1-41902	408	4.030" x 4.000"	Flat	12.0:1	11.2:1
SC1-41903	427	4.125" x 4.000"	Dish	9.6:1	9.1:1

CHEV LS2 & LSX - 58 Tooth Reluctor

These kits suit 2005-on LS2 engines with the 58 tooth reluctor. They include crank, rods, pistons, rings and bearings.

Part No	CID	Bore x Stroke	Piston	64cc	70cc
SC1-44204BI	408	4.030" x 4.000"	Flat -3.3cc	11.4:1	11.2:1
SC1-44205BI	408	4.030" x 4.000"	Dish -10cc	10.6:1	10.4:1

CHEV BIG BLOCK

These kits fit standard deck Chev big blocks. Part numbers 42360 and 42375 suit early blocks with the 2-piece rear main seal and 42500 suits late model blocks with the 1-piece rear main seal.

Part No	CID	Bore x Stroke	Piston	118cc	124cc
SC1-42500-1	540	4.500" x 4.25"	Flat	9.8:1	9.4:1

FORD 289-302 WINDSOR

These kits fit Ford 289-302 Windsor engines. They use 5.4" rods and are designed for external balance with a 28oz balancer and flywheel.

Part No	CID	Bore x Stroke	Piston	58cc	70cc
SC1-45405-1	347	4.030" x 3.40"	Dome	12.9:1	11.1:1

CRANKSHAFTS

BRIAN CROWER ROTATING ASSEMBLYS

Rather than piece together your bottom end with a variety of mismatched parts, order a BC stroker kit that not only increases your overall displacement for more horsepower and torque, but also delivers strength and reliability using only the highest quality parts.

- Complete Balanced Assemblies • Includes Rings & Bearings
- BC Forged H-Beam or Billet I-Beam Conrods
- BC 4340 Billet or Forged Crankshaft
- CP Forged Pistons • Choice of Bore Size and Dish Volume

COMPSTAR

Imported Forged Crankshafts, Machined in USA

Compstar components are forged and semi-finished at various offshore locations. Unlike similar offerings by other companies, all Compstar components are finished and inspected at Callies' manufacturing facility. Compstar utilizes precision gauging and material evaluation equipment that is routinely ISO 17025 certified for consistent accountability. This investment in perfection allows Compstar to maintain proper geometry and quality control, while monitoring both metallurgy and design.

LS1/LS2

Compstar LS crankshafts are supplied with either an OEM or billet aftermarket reluctor. Billet reluctors are supplied installed on the crank, and OEM reluctors are supplied with the crank but are not installed. Billet reluctors are strongly recommended due to inconsistencies with the OEM reluctors.

COMPSTAR SPORT SERIES

Intended for High RPM, High Output engines all Sport Series crankshafts are finished with the same care and detail as the entire line of Compstar crankshafts. All Sport Series cranks are sold balanced and ready for assembly. Sport Series crankshafts by Compstar feature the best metallurgy and heat treatment on the market today.

MAGNUM XL

Callies has once again established a new standard for lightweight crankshafts. Magnum XL lightening profiles result in crankshafts having extremely high strength to weight ratios. Material is carefully removed from non-stressed areas of each shaft to eliminate parasitic weight. The Callies Magnum XL profile is effective at minimizing windage within the crankcase atmosphere. Oil control is improved by not relying on counterweight undercutting to eliminate weight. All Magnum XL crankshafts feature the Callies Ultra-Case nitride treatment. This heat treatment method produces a deep case that enhances strength while creating an extremely hard load bearing wear surface. The Ultra-Case process generates a layer of hardened steel deep enough to maintain its integrity even after a .010 regrind. Each main and rod journal is drilled for weight reduction and throttle response improvement.

By Special Order

MAGNUM

100% USA Made Lightweight Forged Crankshafts

Callies' design team has optimized material distribution throughout this crankshaft to produce a component that is strong yet easy to balance. Callies Magnum Mass Correct counterweights have been strategically placed to reduce imbalance forces over the entire length of the shaft. The result is a crankshaft that exhibits superior bearing life and minimal wear. Our Dual Arc leading edges create a unique counterweight that is beneficial in the reduction of disruptive crankcase windage. This profile characteristic is of greatest value in high RPM, large displacement engines. A typical 4.500 stroke BBC shaft will have a finished weight of 69 lbs. All rod journals are drilled with generously radiused tightening holes. Each counterweight features Callies' (Dual Arc) windage reducing leading edge.

DRAGONSLAYER

100% USA Made Forged Crankshafts

DragonSlayer Crankshafts are made in the U.S.A. for American Racers. The DragonSlayer is rapidly setting the standard by which other Sportsman crankshafts are measured. Each DragonSlayer features the Callies Ultra-Case nitride treatment. This heat treatment method produces a deep case that enhances strength while creating an extremely hard load bearing wear surface. The Ultra-Case process generates a layer of hardened steel deep enough to maintain its integrity even after a -.010 regrind. Roundness and taper are held to less than .0003 on all rod and main journal diameters. Our final polishing procedures produce excellent load carrying surfaces that ensure extended bearing life and trouble free operation. Callies heat treat expertise combined with our high purity premium 4340 forging produce strength of unparalleled value.

LS1, LS2, LS3, LS6

Dragonlayer LS crankshafts are supplied with either an OEM or billet aftermarket reluctor. Billet reluctors are supplied installed on the crank, and OEM reluctors are supplied with the crank but are not installed. Billet reluctors are strongly recommended due to inconsistencies with the OEM reluctors

EAGLE CAST CRANKSHAFTS

ESP Cast Steel Crankshafts offer an excellent alternative to reworking a factory cast crankshaft. Manufactured with 0.092" radius on all journals, rear seal and snout for added strength while still using OE style bearings. Our cranks feature lightening holes in every rod throw. Each crankshaft is inspected for dimension, size, and stroke accuracy. Perfect for applications up to 500 HP.

CHEV SMALL BLOCK 350

These cranks fit Chev small blocks with 350 mains. They are for early model blocks with the 2 piece rear main seal and can be fitted to later blocks with a rear seal adaptor, part number M038315.

EAGLE 4340 FORGED CRANKSHAFTS

ESP Forged 4340 Steel Crankshafts feature a non-twist forging and undergo a multistage heat treatment process as well as stress relieving, shot peening, and nitriding. They are magnafluxed and sonic tested to insure quality. We micro polish each journal to a 3 or better R.A. and a radius of 0.125" is used to increase strength, so chamfered bearings must be used. All rod throws feature lightening holes to reduce weight.

CHEV SMALL BLOCK 350

These cranks fit Chev small blocks with 350 mains. They are for early model blocks with the 2 piece rear main seal and can be fitted to later blocks with a rear seal adaptor, part number GM10051118. • 2 piece rear main seal • Internal balance • Approx. weight is 52-55 Lbs.

Stroke	Rod	Part No.

4.000" Stroke, 6.000" Rod	EA435640006000

FORD BIG BLOCK 429-460

Fits Ford 429-460 big block engines and accepts Chev big block style conrods.

Stroke	Length	Pin	Balance	Part No.
4.500"	6.700"	2.200"	Internal	EA446045002200

SCAT CHEV & HOLDEN CRANKSHAFTS

STOCK REPLACEMENT CAST CRANKS
Designed to replace stock cranks or for mildly built street engines, these cranks are balanced to factory specs and accept all stock components. • Cheaper than a crank regrind! • Precision ground and micro polished • Designed and Engineered at Scat

Application	Part No.
Chev 350, 2-Piece Rear Seal	SC9-10442
Chev 350, 1-Piece Rear Seal	SC9-10526
Chev 383, 2-Piece Rear Seal	SC9-103750
Chev 454, 2-Piece Rear Seal	SC9-10454
Chev 454, 1-Piece Rear Seal	SC9-10454L

SERIES 9000 CAST CRANKSHAFTS

A perfect way to increase cubic inches on mild to moderate street or race engines • Aero-wing counterweights • Straight shot oil holes • Lightening holes in all rod throws (except 3.480 stroke) • Precision ground and micropolished, • Made from SCAT's exclusive space-age 9000 material

HOLDEN V8 304-308

Fits 304-308 Holden V8 engines originally equipped with a rope rear main seal. Available to suit Holden or Chev conrods. Engines with Chev rods can use the commonly available Chev 383 stroker pistons. Can use Felpro neoprene conversion rear seal, part number FEBS40613.

Stroke	Rod	Pin	Balance	Part No.
3.480"	5.627"	2.125"	Internal	SC930834805627
3.480"	5.700"	2.100"	Internal	SC930834805700

SMALL BLOCK CHEV - 2 PIECE REAR SEAL

Fits early model blocks with the 2 piece rear main seal and can be fitted to later blocks with a rear seal adaptor, part number MO38315.

4340 FORGED CRANKSHAFTS

Our standard weight forged crankshaft is designed for street or race engines with substantially increased horsepower

- Straight shot & chamfered oil holes,
- Nitride hardened for superior wear resistance
- Lightening holes in all rod throws
- Large radius on all journals • Precision ground
- Heat treated, shot peened • Inspected & micropolished at SCAT

FORD 302 WINDSOR

These cranks fit Ford 289-302 Windsor engines. They are externally balanced and must be used with a 28oz balancer and flywheel.

HOLLOW DOWELS

Replacement hollow dowels for Scat H-beam rods.

Required when resizing/reconditioning conrods.
Hollow Dowels (pair) **SCC4375BEAM-2**

SCAT ROD CAP ALIGNMENT SLEEVES

ALIGNMENT SLEEVES (DOWELS)
FOR 7/16" BOLT - I & H BEAM RODS **SC-S4375**

K1 TECHNOLOGIES HEMI RODS

Billet 4340 Steel H-Beam Design. High Quality ARP 2000 Fasteners included. Shot peened finish provides for longer life. Premium bronze wrist pin bushings. All rods are finished in the USA and held to very tight tolerances. Bores finished to +/- .0001" and weight to +/- 1 gram per end. Floating wrist pin style.

Billet machined from 4340 steel, BC Pro Series rods are designed for high horsepower forced induction engines. Manufactured on state of the art CNC machining centers, they include ARP 220,000 psi bolts and aluminum bronze bushings. These rods are a billet steel I-beam design which is far superior to a forged H-beam rod.

SIR I-BEAM CONRODS

SIR connecting rods are Forged from 5140 steel and utilize ARP 3/8" capscrew style bolts with alignment sleeves for easier assembly. Packaged in weight-matched sets (+/- 2g). Sizing is performed by in-house CNC equipment. SIR rods are the perfect choice for engines up to 500 HP.

COMPSTAR H-BEAM RODS

Produced from heat treated and stress relieved 4340 material, our H-beam Compstar rods are fully machined with a shot blasted Stress Riser free surface. Finished and sized in our plant in Ohio, every detail of this highly stressed component has been carefully analysed to maximize repeatability and dependability. All lengths are stroker clearanced.

CALLIES ULTRA XD RODS

Callies is pleased to introduce the Ultra XD connecting rod. This unique patent pending configuration is designed for additional cam to rod clearance in long stroke Small and Big Block Chevy racing engines. In most cases, the XD connecting rod will provide approximately .050" more cam clearance than our conventional Ultras, and substantially more over many of our competitor's connecting rods.

ULTRA ENFORCER

I-BEAM CONRODS

Callies Ultra Enforcer Rods have been designed for the harshest of boosted applications with increased mass and extra material where it counts. Forged from 4330 Vanadium enhanced steel and fitted with tough Ampco 45 pin bushings and H11 rod bolts, these rods are rated for 2400 horsepower in V8 applications.

JE Pistons Foot Notes

- A fits 3.480 and 3.500 stroke
- B Oil Rail Support is Included
- C .927 Pin Diameter
- D .912 Pin Diameter
- E .990 wrist pin
- F Indicates 1.040 Pin Diameter
- H Indicates 1.094 Pin Diameter
- J Indicates 3mm Oil Ring
- K .945 Pin Diameter
- L Limited Quantities available
- M Made To Order
- P .975 Pin Diameter
- S Solid dome design
- W 428 Crank Shaft
- X angle milled heads

LS SERIES F.S.R (FLAT TOP)

Our New FSR (Forged Side Relief) slipper forging design allows the use of the most popular stroke and rod combinations while eliminating reductor wheel clearance problems (see photo). Lightweight and extremely durable, these pistons are machined for 1.5, 1.5, 3mm rings and have an inverted dome designed to achieve optimum compression ratio with forced induction applications (CR calculated with .042 gasket thickness and 0.00" deck clearance).

Std Bore: 3.900"-5.7L, 4.000"-6.0L. Ring package designed for: 1.5, 1.5, 3MM Rings

15° LS1 Series

Featuring our traditional style full round skirt, these pistons are designed for the stock rod (.945" dia. wrist pin) or aftermarket/small block chevy (.927" dia. wrist pin) connecting rods. Flat top design achieves compression ratios suitable for normally aspirated applications (CR calculated with .057" gasket thickness and +.010" deck clearance). Pistons are machined for 1.5, 1.5, 3mm rings.

Std Bore: 3.900. Ring package designed for: 1.5, 1.5, 3MM Rings

GM LS ASYMMETRICAL FSR FLAT TOP

GM LS Flat Top Our brand new Asymmetrical FSR (Forged Side Relief) forging design allows for the use of the most popular stroke and rod combinations while eliminating reductor wheel clearance problems. Asymmetrical forging design maintains a larger skirt on the heavily stressed major thrust side, while reducing friction with a smaller skirt on the minor thrust side. The result is a high strength, lightweight piston that significantly reduces friction in your engine. Lightweight and extremely durable, these pistons are machined for 1.2mm, 1.5mm, 3.0mm rings.

GM LS ASYMMETRICAL FSR DISH / INVERTED DOME

GM LS Inverted Dome Our brand new Asymmetrical FSR (Forged Side Relief) forging design allows for the use of the most popular stroke and rod combinations while eliminating reductor wheel clearance problems. Asymmetrical forging design maintains a larger skirt on the heavily stressed major thrust side, while reducing friction with a smaller skirt on the minor thrust side. The result is a high strength, lightweight piston that significantly reduces friction in your engine. Lightweight and extremely durable, these pistons are machined for 1.2mm, 1.5mm, 3.0mm rings.

GM LS7 ASYMMETRICAL FSR FLAT TOP

GM LS7 Flat Top Our brand new Asymmetrical FSR (Forged Side Relief) forging design allows for the use of the most popular stroke and rod combinations while eliminating reluctor wheel clearance problems. Asymmetrical forging design maintains a larger skirt on the heavily stressed major thrust side, while reducing friction with a smaller skirt on the minor thrust side. The result is a high strength, lightweight piston that significantly reduces friction in your engine. Lightweight and extremely durable, these pistons are machined for 1.2mm, 1.5mm, 3.0mm rings. (CR calculated with .040 gasket thickness and 0.00" deck clearance). STOCK ROD MUST BE HONED TO ACCEPT .927" DIA PIN. MILLING OF ROD BALANCE PAD MAY BE NEEDED DUE TO VARIATION FROM FACTORY.

GM 15° LS1

We have redesigned and expanded our GM LS1 series product lines! These new pistons utilized our dedicated Forged Side Relief (FSR) forging that was specifically designed for the demands of the GM LS1 series of engines. In addition we have found ways to reduce weight and maintain the durability needed for both street and racing use. (CR calculated with .051" gasket thickness and +.009-.011" deck clearance). Lightweight and extremely durable, these pistons are machined for 1.5mm, 1.5mm, 3.0mm rings.

SMALL BLOCK CHEV 13° ALL PRO / 13.5° GB2000 - DOME

These pistons incorporate the results of extensive collaboration with top engine builders. Precision CNC-machined ring grooves now accept 1.2, 1.5, 3.0mm rings for reduced friction, while Lateral Gas Ports have been added for improved ring seal. This new configuration outperforms the competition hands down! Pin upgrade recommended above 700hp.

18° 400 SMALL BLOCK DOME TOP

These pistons feature our latest dome profile to match a wider variety of 18° heads. Designed to fit your high-compression, high horsepower 17°/18° dirt late model engine, these pistons have smooth flowing domes for optimum flame travel and angle milled head compatibility. New valve reliefs will accommodate larger valves and long duration, tight lobe separation cams. These pistons utilize dedicated left- and right-hand forgings and accept 1/16, 1/16, 3/16 rings. Pin up-grade recommended above 700hp.

23° 350 SMALL BLOCK DOME TOP PISTON

These high-compression pistons are compatible with most aftermarket 23° heads and are ideal for drag racing and circle track applications. Valve reliefs will accommodate oversized valves and long duration, tight lobe separation cams. Precision CNC ring grooves are designed for 1/16, 1/16, 3/16 rings. Will not fit Pro Topline or Brodix 11X cylinder heads. Std Bore: 4.000. Ring package designed for: 1/16, 1/16, 3/16 Rings

23° 400 SMALL BLOCK DOME TOP PISTONS

These high-compression pistons are compatible with most aftermarket 23° heads and are ideal for drag racing and circle track applications. Valve reliefs will accommodate oversized valves and long duration, tight lobe separation cams. Precision CNC ring grooves are designed for 1/16, 1/16, 3/16 rings. Will not fit Pro Topline or Brodix 11X cylinder heads. Std Bore: 4.125. Ring package designed for: 1/16, 1/16, 3/16 Rings

BIG BLOCK CHEVY FLAT TOP SERIES

These big block pistons are compatible with forced induction, nitrous and angle milled heads. Valve reliefs will accommodate oversized valves and long duration, tight lobe separation cams. Compression Height figured using 9.780" block height with zero deck clearance. Precision CNC machined ring grooves accept 1/16, 1/16, 3/16 rings. Will fit both open and closed chamber cylinder heads. Std Bore: 427/454 = 4.250, 502 BBC = 4.466 Ring package designed for: 1/16, 1/16, 3/16 Rings

BIG BLOCK CHEV OPEN CHAMBER DOME - STD DECK BLOCK

These big block pistons are an excellent choice for drag race applications. Compression Height figured using either 10.180 or 10.195 block height with zero deck clearance. Dome pistons listed will not work with Edelbrock head #6045, 6040, 6055. Pistons for these heads are available by special order. Precision CNC machined ring grooves accept 1/16, 1/16, 3/16 rings. Pin upgrade recommended above 800hp

BIG BLOCK FLAT TOP - TALL DECK

These big block pistons are compatible with forced induction or nitrous (EXCEPT 1.120 CD). Valve reliefs will accommodate oversized valves and long duration, tight lobe separation cams. Compression Height figured using either 10.180" or 10.195" block height with zero deck clearance. Precision CNC machined ring grooves accept 1/16, 1/16, 3/16 rings. Will fit both open and closed chamber cylinder heads, including angle milled versions.

Std Bore: 427/454 = 4.250, 502 BBC = 4.466 Ring package designed for: 1/16, 1/16, 3/16 Rings

BIG BLOCK INVERTED DOME

These big block pistons are compatible with forced induction, nitrous and angle milled heads. The inverted dome shape has been designed for maximum efficiency and horsepower. Valve reliefs will accommodate oversized valves and long duration, tight lobe separation cams. Compression Height figured using 9.780 block height with zero deck clearance. Precision CNC machined ring grooves accept 1/16, 1/16, 3/16 rings. Will fit both open and closed chamber cylinder heads.

Std Bore: 427/454 = 4.250, 502 BBC = 4.466. Ring package designed for: 1/16, 1/16, 3/16 Rings

B/B NITROUS SERIES DOME

These big block pistons have ring lands designed specifically for nitrous applications. Valve reliefs are designed to accept oversized valves and long duration, wide lobe separation camshafts, they are also compatible with angle milled heads. Precision CNC machined ring grooves accept 1/16, 1/16, 3/16 rings. Fits open chamber cylinder heads.

Std Bore: 4.466. Ring package designed for: 1/16, 1/16, 3/16 Rings

BIG DUKE / BIG CHIEF / BIG VICTOR GP 18°

These pistons are specifically designed for Big Duke/Big Chief cylinder heads and feature our race proven dome and skirt design. Valve reliefs are designed to accept oversized valves and long duration, tight lobe separation roller cams. Precision CNC machined ring grooves accept .043 D-wall, 1/16, 3/16 rings.

Std Bore: 4.250 (427/454), 4.466 (502). Ring package designed for: .043 D-WALL, 1/16, 3/16 Rings

BIG BLOCK 12° / 14° 632 FLAT TOP

Specifically designed for Naturally Aspirated 632 engines to fit the following cylinder heads: 12° Raptor, 12° Pro-Flair, Dart Big Chief 14° (program #'s 3815 & 384), Sonny Tru-Pro 14.5°, and Brodix PB1200. Precision CNC machined ring grooves are designed for .043 back-cut top rings, .043 D-wall 2nd rings, and 3.0mm oil rings. Compression distance and compression ratio calculated with zero deck clearance at listed block height. Double spiro locks, Double Forced Pin Oilers, Accumulator Grooves, and Vertical gas ports for maximum top ring seal

Std Bore: Aftermarket Race Block 4.600. Ring package designed for: .043 BACKCUT, .043 D-wall, 3.0mm Rings

BIG BLOCK 12° / 14° 632 NITROUS FLAT TOP

Specifically designed for Nitrous-fed 632 engines using aluminum rods. Valve reliefs fit the following cylinder heads: 12° Raptor, 12° Pro-Flair, Dart Big Chief 14° (program #'s 3815 & 384), Sonny Tru-Pro 14.5°, and Brodix PB1200. Precision CNC machined ring grooves are designed for .043 back-cut top rings, .043 D-wall 2nd rings, and 3/16 oil rings. Compression distance and compression ratio calculated with -.025" deck clearance at listed block height. Double spiro locks, Double Forced Pin Oilers, Accumulator Grooves, and Vertical gas ports for maximum top ring seal

BIG BLOCK CHEV BLOWN ALCOHOL DOME

Designed specifically for high boost blown alcohol drag racing. Valve reliefs accept oversized valves and are compatible with angle milled heads. Precision CNC machined ring grooves accept .017 Dykes, 1/16, 3/16 rings. Fits most popular Open Chamber cylinder heads. 0.200" wall thickness Tool Steel pins included. May be used with buttons (sold separately) in place of spiro locks. Pistons will yield .020" deck clearance at listed block height.

FORD 4.6L / 5.4L MODULAR

These pistons are designed for 4.6/5.4L engines and are compatible with forced induction and nitrous applications. Low compression pistons feature our spherical dish for the ultimate in combustion efficiency. These pistons are race proven in turbo modular motors posting mid 6-second times in the 1/4 mile. 4.6L part numbers now include valve reliefs for either 3V or 4V heads as noted below. 5.4L part numbers have no valve reliefs. Accept 1.5, 1.5, 3.0mm rings.

FORD COYOTE 5.0L MODULAR - NEW FSR SERIES

We have redesigned and expanded our Ford Modular product line! The new pistons utilize a dedicated Forged Side Relief (FSR) forging that was specifically designed for high horsepower Modular engines. In addition we have found ways to reduce weight and maintain the durability needed for both street and racing use. Lightweight and extremely durable, these pistons are machined for 1.0mm, 1.2mm, 2.8mm rings.

302/351 BIG BORE DOME

All new small-block Ford dome pistons, available in large bore sizes to accommodate new aftermarket race blocks. These pistons will fit most aftermarket and factory heads. Cleveland and TFS Twisted Wedge heads will require custom pistons. Precision CNC machined ring grooves accept 1/16, 1/16, 3/16 rings.

460 FLAT TOP

These pistons are compatible with OEM and aftermarket standard valve location heads, they will accommodate oversized valves and long duration, wide lobe separation cams. Precision CNC machined ring grooves accept 1/16, 1/16, 3/16 rings and compression height is figured for 10.300 block height. Note: SVO A, C, E and BOSS aluminium heads require custom pistons. Pistons also available for TFS A460 13° & M-6049-SCJ 9°

427/428 PISTONS

427/428 "FE" INVERTED DOME

Specially designed for the latest aftermarket blocks and heads, these pistons are for use with the 427 or the 428 crank and aftermarket 4.250" crank with aftermarket 6.700" rod. The factory block should be sonic checked for 4.280" and 4.310" bores. These pistons use 1/16, 1/16, 3/16 rings. The compression ratios are figured for 10.150 block height. Larger bore sizes available as customs,

427 INVERTED DOME

Std Bore: 4.233. Ring package designed for: 1/16, 1/16, 3/16 Rings
Note: 162116 & 162117 Designed to work with OEM and aftermarket connecting rods. 242930, 242931, & 242932 designed for aftermarket connecting rod only.

JE SPORT COMPACT FORGED PISTONS

*Dome/Dish requires no deburring or preparation *2618 T6 high tensile forged aluminium

*JE designs are specifically engineered for extreme applications up to, and including, professional competition. In this environment, the higher compression ratios, highest boost or heavy nitrous usage necessitate the higher tensile strength 2618 aluminium alloy.

*Dome and dishes feature smooth flowing radii for excellent flame travel. *1.0 x 1.2 x 2.8mm ring widths.

*straight wall carbon steel wrist pin provided. *Pin fitting and wire locks included

*Rings Now Included

SRP Pistons Foot Notes

- A fits 3.480 and 3.500 stroke
- B Oil Rail Support is Included
- C .927 Pin Diameter
- D .912 Pin Diameter
- E .990 wrist pin
- F Indicates 1.040 Pin Diameter
- H Indicates 1.094 Pin Diameter

- J Indicates 3mm Oil Ring
- K .945 Pin Diameter
- L Limited Quantities available
- M Made To Order
- P .975 Pin Diameter
- S Solid dome design
- W 428 Crank Shaft
- X angle milled heads

SRP PROFESSIONAL LS2 / LS3 / LS6 / L92: INVERTED DOME PROFESSIONAL SERIES

PISTON DESIGN

- Advanced, lightweight FSR forging that eliminates stress concentrations for superior strengt
- High-silicon 4032 aluminium alloy for reduced piston-to-wall clearance and quiet operation
- Designed for normally aspirated or moderate forced induction/nitrous applications
- Now includes high performance skirt coating!
- Up to 20% lighter than traditional equivalent
- Accumulator grooves for improved ring seal
- Compatible with GM L92 Cylinder Heads

RINGS INCLUDED

- Lightweight, low friction metric ring package included
- 1.2mm top ring, 1.5mm Napier 2nd ring, 3.0mm standard tension oil ring
- Napier 2nd ring for improved oil control
- Minimal filing required

350/400 FLAT TOP

*Ideal for oval track to street/strip applications.

*Forced Pin Oiler for increased wrist pin lubrication

*927-2750-150 wall wrist pin (130 grams) included

*Forged from 4032 low expansion high silicon aluminum alloy heat treated to SRP specifications

*Pin fitting, and double spiro locks included

*CNC Machined ring grooves accept 1/16, 1/16, 3/16 rings (Rings Sold Separately)

OPEN CHAMBER - BBC FLAT TOP / INVERTED DOME

•4032 low expansion high silicon aluminium alloy heat treated to SRP specifications •Ring land and crown thickness specifically engineered for mild turbo, supercharged and nitrous applications
 •Forced Pin Oiler for increased wrist pin lubrication •Pin fitting and double spiro locks included
 •990-2930-150 wall wrist pin (150 grams) included
 •Optional bearing steel pins available

OPEN CHAMBER - BBC FLAT TOP / INVERTED DOME

OPEN CHAMBER - BBC HIGH COMPRESSION DOME

*Hollow dome design fits most open chamber STD GM®, Dart®, and Brodix® Heads

*CNC machined domes with radiused valve reliefs provide optimum flame travel

*990-2930-150 wall wrist pin (150 grams) included

*Fits tall deck, when used with .400 long rods.

60449, 60459, 61459, 60479, 60499

Std Bore: 454 = 4.250, 502 = 4.470. Ring package designed for: 1/16, 1/16, 3/16 Rings

*Forged from Premium 2618 aluminium alloy

*Pin fitting and double spiro locks included

*CNC Machined ring grooves accept 1/16, 1/16, 3/16 rings (Rings Sold Separately)

*Will not fit GM Signature Series or Edelbrock Cylinder Heads: P/N# 60549, 60559, 61559,

SMALL BLOCK 340 / 360

- 4032 low expansion high silicon alloy heat treated to SRP specifications
- Pin fitting and double spiro locks included

- .984 x 2.750 x .150 straight wall wrist pin included (138 grams)
- Forced Pin Oiler for increased wrist pin lubrication
- CNC Machined ring grooves accept 1/16, 1/16, 3/16 rings (Rings Sold Separately)

BOSS 302 DOME

- Ideal for high performance street/strip or vintage road racing.
- Forced Pin Oiler for increased wrist pin lubrication
- CNC Machined ring grooves accept 1/16, 1/16, 3/16 rings (Rings Sold Separately)
- Forged from Premium 4032 aluminium alloy
- Solid dome w/ special profile fits small chamber Australian 302 2V head. Can also be milled flat for use with aftermarket heads
- .912 x 2.750 x .140 straight wall wrist pin (123g), pin fitting and double spiro locks included

390/428 "FE" FLAT TOP

For the first time ever, our race-proven SRP design is available for the Big Block Ford "FE" series. Available for both stock stroke and stroker applications. Bore sizes for the 428 block are set at .025" over to allow the use of popular file-fit rings. These pistons offer thick .250" top ring lands for use with limited nitrous or boost while still offering substantial weight savings. Wrist pin diameter is .975" for part numbers designed for 6.490" OEM rods and .990" for part numbers designed for aftermarket 6.700" rods (see footnotes). Includes: Pin#: 975-2750-16-51S (Footnote P) or 990-2750-15-51S (Footnote E) Double Spiro Locks (#990-042-CS)

JE WRIST PINS

JE's philosophy of supplying the finest products at competitive prices have never been more evident than in the line of wrist pins. Developed specifically for use with JE pistons, these pins are available in a wide variety of materials, diameters, length and wall thickness. Part Number eg Break Down: 945-2750-14-51S Diameter - .095" Outside Dimension Length 2.750" - Overall Length Of Wrist Pins In Inches Wall Thickness .150" - Number Indicates First Two Decimal Places Series/Material - 5115 Low Carbon Steel, Straight Wall Lock Type - C = Chamfer End - S = Sharp End

51 Series

JE Standard high performance pins are made from premium 5115 low carbon, case hardened steel. Perfect for high performance Street/strip applications. 52 Series for high impact, drag race and endurance applications JE offers the 52 Series pins. These pins are constructed from 52100 high carbon bearing steel and through hardened for added stability, and are available in a wide variety of lengths, diameters and wall thickness. 72-93 & 95 Series in addition to the 52 Series JE offers many other pins suitable for high impact, drag race and endurance applications. These pins include the 72 series constructed from 300M aerospace steel, the 93 series made with 9310 Nickel/Carbon steel alloy and the 95 series also constructed from 9310 Nickel/Carbon Steel alloy with tapered end. (From a wide variety of pin diameters & pin lengths call Rocket for more information & pricing)

Chev BB, Chrysler	Spirolox	1.072"	0.050"	SPLR261

JE SPIRO LOCKS

JE Pistons lock rings are designed for floating-pin pistons. Engines produced with press-fit pins can be converted to the "floating" type, providing that the piston has provisions for a lock ring retainer. Floating pins are preferred by most serious engine builders.

Pin Dia.	Range	Part No.
.861 - .880		J866-042-CS
.896 - .945		J927-042-CS
.946 - 1.005		J990-042-CS
1.026 - 1.045		J031-042-CS
1.089 - 1.099		J094-037-CS

(Also Available - Tru Arc Locks, Wire Locks & Hook Locks. Call Rocket for more information)

JE TRU-ARC LOCK

Pin Dia. .905 X .042

Part No. J866-042-CS

JE RAIL SUPPORTS

JE Rail Supports feature a special locking detent to prevent rotation of the rail and keep the rail support gap 90° from the pin bore opening on the piston. This JE exclusive feature prevents the rail from rotating in the oil groove.

Bore Range	Grams	Part no.

(Rail supports range from 2.999 to 4.700 available call rocket for more information)

SPEED-PRO HYPEREUTECTIC PISTONS

Speed-Pro hypereutectic pistons are perfect for street engines and racers on a budget. They combine Speed-Pro's proprietary FM244 alloy with sophisticated design features at a price that cannot be beat. The hypereutectic alloy allows you to run tighter piston to bore clearance than forged pistons for a quiet, smooth running engine. Compression ratio calculations are based on standard block heights and a .039" thick head gasket.

SPEED-PRO E-SERIES RING SETS

Speed-Pro's E-series piston rings are suitable for stock replacement and mild performance applications. They are available in cast or moly.

Cast rings are recommended for use in dusty conditions or with improper bore finishes such as when re-ringing a block without honing. Moly rings are recommended for all performance applications and will last longer than cast rings when used with the proper bore finish.

PLASMA MOLY RING SETS

Speed-Pro Plasma Moly ring sets are suitable for race and hot street engines. They feature high strength ductile iron top rings with plasma moly facing, cast iron tapered face second rings and SS-50 stainless steel oil rings. These rings have standard gaps and do not require file fitting.

UNIVERSAL SPORT COMPACT RING SETS

Speed-Pro sealed power sport compact ring sets feature chrome top rings which makes them perfect for turbo and nitrous applications. The popular .86mm bore size suits many Honda, Mitsubishi, Nissan and Toyota 4 cylinder engines. Check ring thickness before ordering.

Application	Bore	Thickness	Part No

PLASMA MOLY RING SETS - FILE FIT

Speed-Pro Plasma Moly ring sets feature high strength ductile iron top rings with plasma moly facing, cast iron tapered face second rings and SS-50 stainless steel oil rings. They are supplied .005" oversize and must be filed to the proper gap on installation allowing engine builders to set ring gaps for maximum power.

SPEED-PRO PLASMA MOLY RING SETS

- FILE FIT (Low Tension Oil Rings)

These Plasma Moly ring sets feature low tension oil rings which create less friction and are normally used with a vacuum pump or dry sump system with vacuum in the crankcase. They are supplied .005" oversize and must be filed to the proper gap on installation

CYLINDER HEADS

ALUMINIUM CYLINDER HEADS

The Aeroflow Series of Aluminium Cylinder Heads are taking affordable performance street and strip cylinder heads to the next level. These heads utilise ultra-smooth A356-T6 aluminium castings, new as-cast runner and chamber designs produce excellent flow numbers. This combined with a 5-angle competition valve job, diamond-honed bronze guides, hand bowl blending and professional assembly help to outperform some of the best brands in the business. Complete assemblies include valves, valve springs, retainers & locks, guide plates and 7/16" rocker studs (Chrysler heads do not include guide plates or rocker studs). Aeroflow cylinder heads also available in bare configurations and in cast or CNC ported options.

ALUMINIUM CYLINDER HEADS TO SUIT

CHEVY SMALL BLOCK 186cc & 204cc

The Aeroflow Performance small block Chevy cylinder heads are designed for entry level street performance engines to give the ultimate in flow at a budget price. Made from A356 aluminium castings the 186cc and 204cc cylinder heads are ideal for operating in the idle to 6500 rpm range. These complete cylinder heads will fit a 4.00" bore and larger. The complete heads include larger than stock 1.43" (36.3mm) diameter dual valve spring to handle up to 0.575" (14.61mm) maximum lift. Suits flat tappet and hydraulic camshafts.

CHEVY SMALL BLOCK 212cc

The Aeroflow Performance small block Chevy cylinder heads are designed for street / race performance engines to give the ultimate in flow at a competitive price. Made from A356 aluminium castings these 212cc cylinder heads are ideal for operating in the idle to 7500 rpm range. These complete cylinder heads will fit a 4.00" bore and larger. The complete heads include larger than stock 1.57" (40mm) diameter dual valve spring to handle up to 0.625" (15.87mm) maximum lift. Suits solid and hydraulic roller camshafts.

CHEVY BIG BLOCK 320cc

The Aeroflow Performance big block Chevy cylinder heads are designed for street / race performance engines to give the ultimate in flow at a competitive price. These heads flow 364cfm! Best suited for high revving 454, or 502ci up Big Blocks. Made from A356 aluminium castings these 320cc cylinder heads are ideal for operating in the idle to 6750 rpm range. The complete heads include larger than stock 1.625" (41mm) diameter dual valve spring to handle up to 0.850" (21.5mm). Suits flat tappet and hydraulic camshafts.

ALUMINIUM CYLINDER HEADS TO SUIT GM LS 276cc

The Aeroflow Performance LS3 Chevy cylinder heads are designed for street / race performance engines to give the ultimate in flow at a competitive price. Made from A356 aluminium castings these 15 Degree Rectangle Port heads are designed to fit LS large bore engines. These bare 276cc heads accept 2.165" (55mm) diameter intake valves and 1.60" (40.64mm) exhaust valves. Available in OE 4 bolt design or 6 bolt design to suit standard or LSX block designs. Note: Thread sealant must be used on all rocker bolts as threads intersect with intake ports.

FORD SMALL BLOCK WINDSOR 175cc, 185cc, 205cc

The Aeroflow Performance small block Ford Windsor cylinder heads are designed for street performance engines to give the ultimate in flow at a budget price. Made from A356 aluminium castings. The 175cc cylinder heads are ideal for operating in the idle to 6500 rpm range. The complete heads include larger than stock 1.46" (37mm) diameter dual valve spring to handle .525" lift. Suits flat tappet camshaft.

The 185cc cylinder heads include larger than stock 1.32" (33.5mm) diameter dual valve spring to handle up to 0.600" (15.25mm) maximum lift. Suits flat tappet and hydraulic camshaft. The 205cc cylinder heads are ideal for operating in the idle to 7500 rpm range. The complete heads include larger than stock 1.575" (40mm) diameter dual valve spring to handle up to 0.710" (18mm) maximum. Suits hydraulic roller camshafts.

FORD FE 390-428 170cc

The Aeroflow Ford FE Aluminium Cylinder Heads are taking affordable performance street and strip cylinder heads to the next level. These heads utilise ultra-smooth A356-T6 aluminium castings, new as-cast runner and chamber designs produce CNC flow numbers. These Ford FE heads have 170cc intake runners, combined with diamond-honed bronze guides and hand bowl blending to outperform some of the best brands in the business.

AF95-0390	BARE (sold in pairs)
-----------	----------------------

GM CNC LS3 276cc Cylinder Head Assembly

The CNC-ported LS3 head features 276cc intake runners and 92cc exhaust ports, along with a combustion chamber volume of about 68.5cc. That's the same volume as stock LS3 heads, which maintains the stock compression ratio. It will fit any LS engine with cylinder bores of 4.000 inches or larger, including 6.2L L92 truck engines. Each head is delivered fully assembled, with 2.165-inch hollow-stem intake valves and 1.59-inch solid-stem exhaust valves, as well as valve springs, valve locks, spring retainers and valve stem seals. The maximum recommended valve lift with the stock valve train components is 0.550-inch. Aluminium performance head features: •Fits any LS family engine with 4.00" bore or larger •2.165" hollow stem intake, and 1.59" solid stem exhaust valves •.550" max valve lift •CNC L92 style 276cc intake ports •D-shaped exhaust ports •CNC 68.5cc combustion chambers

GM CNC LS3 Head (Each) GM88958758

AFR 180cc SB CHEV ELIMINATOR CNC HEADS

Ideal operating range of idle to 5500 rpm, 23° valve angle, and standard valve spacing make this the perfect street aluminium cylinder head for 327 cid to 350 cid engines. • Fully CNC Ported • Flows 270 CFM @ .500" Lift • 2.02" & 1.60" Stainless Steel Valves • Lightweight 8mm Valve Stems • 1.290" OD Dual Springs • 65cc or 75cc Chambers • With Heat Riser • 3/4" Thick Deck

180cc, Straight Plug, Assembled - 75cc AFR0911
180cc, Straight Plug, Assembled - 65cc AFR0916

AFR 195cc SB CHEV ELIMINATOR CNC HEADS

Ideal operating range of 2000 rpm to 6500 rpm, 23° valve angle, and standard valve spacing, perfect street head for 350 cid to 400 cid engines from 1955-86. Dual valve cover bolt pattern is standard. Exhaust port is raised .100" over GM L98 cylinder heads. • Fully CNC Ported • Std Pkg Flows 280 CFM @ .550" Lift • Std Pkg - 2.05" & 1.60" Stainless Valves • Comp Pkg Flows 300 CFM @ .600" Lift • Comp Pkg - 2.08" & 1.60" Stainless Valves • Lightweight 8mm Valve Stems • 1.290" OD Dual Springs • 65cc or 75cc Chambers • With Heat Riser • 3/4" Thick Deck

AFR 220cc SBC Eliminator Racing Cylinder Head

Requires no special parts.

Valves and studs are in stock GM L98 locations. They do not require offset rockers of any kind. A 325 CFM head that is perfect for someone wanting to retain all their standard components while still having the airflow to reach that elusive 700 HP mark in aggressive drag race trim. Displacement ranging from a high RPM 350 to a 427 CID with natural applications in the various sportsman classes, bracket/drag cars, oval track, and larger displacement street machines with typical operating ranges between 4000 to 8000 RPM depending on application. Getting this much flow from a stock geometry 23° head means they will only be available in fully optimized "competition" CNC porting. As always, they come with AFR's trademark 3/4" thick head deck (ideal for nitrous or blower applications). Standard valves are lightweight 8mm 2.100 intake and 1.600 exhaust with AFR's hardened ductile iron interlocking seats. Dual valve cover bolt pattern is standard. Exhaust port is raised .250 over GM L98.

CNC Competition Porting
220cc, Angled Plug, Comp Pkg - 75cc AFR1110

AFR 227cc SB CHEV ELIMINATOR CNC HEADS

The exceptional flow characteristics and 23° valve angle make this the perfect head for 350 to 434 cid engines in drag cars, sprint cars, and late model oval trackers operating from 4500 rpm and up. AFR offset stud girdles are the only special parts required. Some applications require shaft mount rockers or .050" offset rocker arms for durability and reliability of valve train components. Not recommended for street use, unless shaft mount rocker is used. Dual valve cover bolt pattern is standard. The Exhaust port is raised .250" over GM L-98 cylinder head.

• Fully CNC Ported • Std Pkg Flows 309 CFM @ .650" Lift • Comp Pkg Flows 318 CFM @ .650" Lift • 2.10" & 1.60" Stainless Steel Valves • Lightweight 8mm Valve Stems • 1.550" OD Roller Springs • 65cc or 75cc Chambers • 3/4" Thick Deck

 Offset Stud Girde for 227cc Heads AFR6208

AFR 235cc SBC Eliminator Racing Cylinder Head

With the price of big displacement SBC engines a fraction of what they were years ago, the allure to go BIG is stronger than ever. To help quench the thirst of that large displacement monster AFR is proud to offer our largest direct bolt on 23° Chevy head yet. At 235 cc's, anything under 400 inches can drop the other way. It has the same geometry as our 227 head and will accept all the same rocker arms, stud girdles, etc. AFR offset stud girdles are the only special parts required. Some applications require shaft mount rockers or .050 Offset intake rocker arm for durability and reliability of valve train components. With the .050 Offset the intake rocker arm will be at a slight angle and the roller tip will not be perfectly parallel or centered on the valve. It will feature a larger 2.125 Diameter intake valve. Exhaust valve diameter stays the same with a little more flow from its larger runner volume. The big news is our all new intake port design which pushes this standard location intake port over 340 cfm! That's 18" territory and this head should be able to generate power Figures that rival those heads (725+ hp). As well the exhaust port is raised .250 Over GM L98 head. This head is not for every large displacement combination so if you're unsure whether this is the right afr head for you, we always encourage you to contact us directly.

Description Part No.
235CC ANGLED PLUG 80CC AFR1130-TI
235CC ANGLED PLUG 70CC AFR1132-TI

AFR 245CC NPP SBC ELIMINATOR RACING HEAD

Afr is proud to introduce our new 245 npp (no pushrod pinch); best suited for max effort applications, but larger displacement 427+ pump gas engines could consider this head as well. This exciting product represents our best flowing 23° sbc head to date and while flow numbers may reflect a very good 18" head of the past, this head is still a conventional runner into non-raised runner intake port configuration. It will drop on your 23° shortblock as easily as our 227 or 235 sbc product and in fact shares identical valve centerlines and rocker stud locations to both of those heads. However, unlike the 227 and 235 heads, this product will not accept stud mount style rockers and a shaft mount rocker system with a .180 Offset intake lifter is required. Larger diameter 3/8" pushrods fit without additional clearancing.

This is primarily due to the fact we enlarged and widened the pushrod pinch removing that checkpoint in the entrance of the intake allowing us to design a port with a more direct shot at the back of the valve that also has a more consistent cross sectional area and velocity profile. In addition, this head comes standard with a 3/4 inch deck, 2.125 Intake and 1.600 Exhaust. The exhaust port is raised .250 Over GM L98 head. If you are unsure if this is the right afr head for you, we encourage you to contact us directly to discuss your combination.

245cc, Angled Plug - 70cc AFR1137-TI

LS1 ALUMINIUM CYLINDER HEADS

AFR 205cc LS1 MONGOOSE CNC HEADS

For the ultimate high performance street LS1/LS2/LS6 aluminium cylinder head AFR's all new 205cc emission legal are your only choice. Specifically designed for 1997 to present Gen-3 engines. AFR's LS1 cylinder head offers unmatched flow performance. The 205cc cylinder head is ideal for normally aspirated 346 to 396 cubic inch engines and is a direct bolt on with no special parts required.

• Fully CNC Ported • Flows 298 CFM @ .600" Lift • 2.02" & 1.60" Stainless Steel Valves • Lightweight 8mm Valve Stems • 1.290" OD Single Springs • 3/4" Thick Deck

205cc LS1, Assembled - 66cc AFR1510

AFR 245cc LSX Mongoose Strip Aluminum Heads

A tremendous amount of time and energy was invested to bring you our 245cc LS1/LS2/LS6 Gen III head what represents the pinnacle in cathedral design bolt on performance. With over 355 CFM's available it has intake flow numbers approaching GM's famed (and much larger) LS7 head with much stronger exhaust flow in comparison. This head is our take no prisoners LSX cathedral shaped offering and its focus is large displacement combinations (415 - 454 CID) with a minimum bore size of 4.000. It requires a head gasket bore of 4.200 or larger and comes standard equipped with lightweight 2.160 intake valves / 1.600 exhaust. Another unique feature of this head is that it is "solid roller friendly" having been designed and machined to accept larger .375 pushrods without additional clearancing (in most applications) and comes direct from the factory with 1.510 spring pockets (Note: Under no condition can these pockets be machined deeper). With an aggressive set-up this head is capable of producing power in the 700 HP range while still providing gobs of low and midrange torque. It is still a factory direct bolt on with standard length valves, stock valve train geometry, and everything in their respective OEM locations. It of course comes standard equipment with AFR's trademark 3/4" head deck and the same rugged castings found in the rest of the AFR LSX line up. Make sure you're packing lots of displacement to fully realize the benefits this head can offer you and hang on when its time to go WOT!

245cc LSX LS1 Assembled - 64cc AFR1680

AFR 225cc LS1 MONGOOSE CNC HEADS

For the maximum high performing street/strip LS1/LS2/LS6 aluminium cylinder heads AFR's all new 225cc are hands down the best choice. Specifically designed for 1997 to present Gen-3 engines. AFR's LS1 cylinder head offers unmatched flow performance. Our 225cc cylinder head is ideal for normally aspirated 396 to 427 cubic inch engines. For a wild 346 ci the 225 is a good choice, however some low RPM loss of torque might occur. AFR's LS1 is a direct bolt on, no special parts required.

• Fully CNC Ported • Flows 320 CFM @ .600" Lift • 2.08" & 1.60" Stainless Steel Valves • Lightweight 8mm Valve Stems • 1.270" OD Single Springs • 3/4" Thick Deck

Description Part No.

 225cc LS1, Assembled - 75cc AFR1630
 225cc LS1, Assembled - 65cc AFR1660

AFR 260cc LS3 MONGOOSE CNC HEADS

AFR's 260cc LS3 "Mongoose" heads feature 100% CNC ported intake, exhaust and chambers using our advanced engineering and flow techniques to produce the ultimate Rectangle Port head available today. Featuring A356 aluminium castings, titanium retainers and the highest quality components, throughout. They're designed for 4.000 or larger bore applications up to 454 CI, operating up to 7000 RPM

• 100% CNC Ported Combustion Chambers
 • 100% CNC Ported Exhaust Ports
 • 100% CNC Ported Intake Ports • Competition 5-angle Valve Job
 • 8mm Bead Lock Intake Valve, 2.165" x 5.195" Overall Valve Length • 8mm Bead Lock Exhaust Valve, 1.600" x 5.200" Overall Valve Length • PAC Racing Spring 1.270" OD Hydraulic Roller Dual Valve Spring, 155 lbs. on seat, Max RPM 7000-7200
 • 7° Titanium Retainers • 7° Bead Lock Valve Keepers
 • Viton Valve Seals • Hardened Valve Spring O.D Locator
 • Ductile Iron Intake Valve Seats • Ductile Iron Exhaust Valve Seats
 • 8mm Bronze Valve Guides • Rocker Rail Stand

AFR 270cc BULLIT BB FORD 14° STREET HEADS

AFR's 270cc big block Ford heads feature partially CNC ported intake, exhaust & chambers, A356 aluminium castings and high quality components throughout with standard exhaust port locations. Recommended for street, towing, or street/strip engines with displacements up to 477 cubic inches, operating up to 1200 RPM. Please note, due to AFR's valve angle and location, custom pistons or notching existing pistons will be required.

• Flows 390cfm @ .650" Lift
 • 2.250" & 1.760" Stainless Steel Valves
 • 1.550" OD Solid or Hydraulic Roller Springs
 • 3/4" Thick Deck

Description Part Number

AFR 300cc BULLIT BB FORD 14° RACE HEADS

The 300cc heads are AFR's largest and best flowing BBF heads! They feature 100% CNC ported intake, exhaust & chambers, A356 aluminium castings, and high quality components throughout with .250" raised exhaust port locations. These heads are best suited for large displacement high RPM Big Block Ford racing engines or radical "Pro Street" style builds. Please note, due to AFR's valve angle and location, custom pistons or notching existing pistons will be required.

• Flows 427cfm @ .750" Lift
 • 2.300" & 1.760" Stainless Steel Valves
 • 1.625" OD Solid Roller or 1.550" OD Hydraulic Roller Springs
 • 3/4" Thick Deck

AFR 305cc BB CHEV MAGNUM AS CAST HEADS

The smallest intake volume runners

in our big block line-up, but don't let size fool you.

Our 305cc As Cast heads with CNC bowl blend

will provide you with flow numbers most medium sized heads, and some larger, can only dream about. Their application should be focused on 396-502 cubic inch Big Blocks with a primary applications up to 555 CID, where low rpm power and drivability are a factor.

- As Cast with CNC Bowl Blend • Flows 363 CFM @ .600" Lift
- 2.25" & 1.88" Stainless Steel Valves • 1.625" OD Roller Springs
- 3/4" Thick Deck

305cc BBC, Assembled - 119cc **AFR2100**

AFR 315cc BB CHEV MAGNUM CNC HEADS

This line was designed to optimize low and mid-lift airflow, while still generating impressive peak figures. Their application should be focused on smaller 396-502 cubic inch Big Blocks with a primary operating range of 2500-6800 rpm and street driven or marine applications up to 555 CID, where low rpm power and drivability are a factor. These heads are extremely versatile with incredibly strong low and mid lift airflow figures as well as peak numbers approaching the 400 CFM mark.

- Fully CNC ported • Flows 387 CFM @ .800" Lift
- 2.25" & 1.88" Stainless Steel Valves
- 1.625" OD Roller Springs • 3/4" Thick Deck

315cc BBC, Assembled - 121cc **AFR2000**

AFR 325cc BB CHEV MAGNUM AS CAST HEADS

Are you looking for big torque and big horsepower numbers? Our BB Chevy 325cc Magnum heads will provide you with exactly that. These high flow/high velocity ports provide extreme versatility and fill the needs of many applications. From a max-effort high compression 454 to a 605 CID low rpm marine application. These heads are also ideal in a larger cubic inch "Pro-Street" application with their broad torque range, as well as significant rpm and horsepower capability. These cylinder heads will work best with a primary operating range of 3000-7000 rpm's

- As Cast with CNC Bowl Blend • Flows 384 CFM @ .700" Lift
- 2.30" & 1.88" Stainless Steel Valves • 1.625" OD Roller Springs
- 3/4" Thick Deck

325cc BBC, Assembled - 121cc **AFR2101**

AFR 335cc Fully CNC Ported Magnum

BBC Cylinder Head

Are you looking for big torque and big horsepower number? Our BB Chevy line of medium volume intake runners will

provide you with exactly that. The phrase "having your cake and eating it to" would certainly be appropriate with their moderately sized intake runners producing tremendous flow figures across the entire lift range (Our CNC 335 flows 410 CFM!). These high flow/high velocity ports provide extreme versatility and fill the needs of many applications. From a max-effort high compression 454 to a 605 CID low rpm marine application, either one of these cylinder heads would be a great choice. These heads would also be ideal in a larger cubic inch "Pro-Street" application with their broad torque range, as well as significant rpm and horsepower capability. These heads will work best with a primary operating range of 3000-7000 rpm's (This range is an average and will vary with engine displacement as well as component selection). Both the 325cc and the 335cc come standard with AFR's trademark .750" thick head deck, reinforced rocker stud bosses, and are equipped with premium one piece stainless steel 2.300" intake valves and 1.880" exhaust valves. Standard combustion chamber volume is 121cc for our 335cc BBC. Properly selecting the correct cylinder head for an application depends on a large number of variables. Please consult with one of our sales technicians to assist you in making the best decision for your particular application.

335cc BBC Magnum bbc Assembled heads - 121cc **AFR2001**

AFR 345cc BB CHEV MAGNUM AS CAST HEADS

If huge horsepower is what you are searching for, these castings will certainly deliver. These cylinder heads were targeted at 509-632 cubic inch engines looking for maximum horsepower and rpm capability with a primary operating range of 3500-8000 rpm's. These aluminum heads provide impressive torque figures at higher rpm levels and will work best with camshafts exceeding .750 gross valve lift to make better use of the substantial airflow found in the higher lift range.

- Flows 405 CFM @ .800" Lift • 1.625" OD Roller Springs
- 2.30" & 1.88" Stainless Steel Valves • 3/4" Thick Deck

345cc BBC, Assembled - 121cc **AFR2110**

AFR 357cc BB CHEV MAGNUM CNC HEADS

Our fully CNC ported 357cc heads flowing 425 CFM, represent the ultimate in airflow for your BB Chevrolet. No other production style BB Chevy head even comes close. These cylinder heads were targeted at 509-632 cubic inch engines looking for maximum horsepower with a primary operating range of 3500-8000. Blown, turbo, and nitrous engines will especially like the larger, higher flowing intake ports. These heads will work best with camshafts exceeding .750 gross valve lift to make better use of the substantial airflow found in the higher lift range.

- Fully CNC ported • Flows 425 CFM @ .800" Lift
- 2.30" & 1.88" Stainless Steel Valves • 1.625" OD Roller Springs
- 3/4" Thick Deck

357cc BBC, Bare Heads - 121cc **AFR3570**

AFR 385cc Fully CNC Ported Magnum BBC Cylinder Heads

As the aftermarket continues to push larger displacement combinations, even 555 CID BBC's are becoming commonplace with 600+ CID engines more plentiful than ever before. AFR is proud to announce our answer to that with our all new 385cc Magnum, the largest and highest flowing BBC product in our line-up with flow numbers that are creeping up on many of our competitor's 18 degree Pro-stock style heads. If you've got the displacement we have the head to feed it with an intake port that flirts with 440 CFM at a usable lift-point, and enough complementing exhaust flow to still maintain over 75% of that number @ .800 lift (335 CFM's at .800 lift!). While this huge a runner is more clearly aimed at 572 - 632 CID applications, in a light car it could still be considered in 555-565 CID aggressive builds that are built to reliably turn 7800 - 8500 RPM's (Ti valves recommended over 8000 RPM's). This head will be best utilized with camshafts in the .780 - .850 range to take full advantage of its impressive higher lift airflow, but the best thing about this head is its ability to also provide the end user with industry leading low and mid-lift flow as well (400+ CFM at .600 lift!). This head of course comes with AFR's trademark .750 thick head deck, reinforced rocker stud bosses, and is equipped with 2.350 intake / 1.880 tulip exhaust valves. Properly selecting the right cylinder head depends on a large number of variables. Please consult with one of our sales technicians to assist you in making the best choice for your particular application.

AFR 165cc Renegade SBF Cylinder Head

These heads come ready for the maximum street/strip Small Block Ford performance possible. These 165cc performance heads are non-emissions legal and come with lightweight 8mm 1.900 intake valves and 1.600 exhaust valves. As well, they come with 58cc combustion chambers and a 70cc ultra high flowing nitrous exhaust port. With AFR's trademark 3/4" thick head deck, it's no problem handling that additional cylinder pressure. Each head is also drilled with 1/2" head bolt for maximum head gasket retention as a standard feature of this serious race piece in street design.

165cc SBF, Assembled - 58cc **AFR1399**

AFR 195CC RENEGADE SBF FORD CNC HEADS

These AFR 195cc SBF Competition cylinder heads come ready for maximum small block Ford performance. They feature 195cc intake runners with lightweight 8mm, 2.020 in. intake and 1.600 in. exhaust valves. The heads are available in your choice of 58cc or 72cc combustion chambers. With AFR's trademark 3/4 in thick head deck, it's no problem handling that additional cylinder pressure. Each of these AFR 195cc SBF Competition cylinder heads is drilled for the larger 1/2 in. head bolt hole as a standard feature for maximum head gasket retention.

- Fully CNC ported • Flows 315 CFM @ .650" Lift
- 2.02" & 1.60" Stainless Steel Valves • Light Weight 8mm Valves Stems

AFR 205cc SBF Renegade Race Cylinder Head

If you're looking for the world's finest street/strip head available, AFR's 205cc aluminium cylinder head is your answer. With lightweight 8mm 2.080 intake valves, 1.600 exhaust valves this head moves tremendous volumes of air through conservative runner volumes, spelling big torque and horsepower numbers. With combustion chamber volumes of 58cc or 72cc accompanied by 70cc exhaust parts which are raised .125 higher than stock, AFR's new 205cc is the ultimate choice for 331 through 392 engines operating from 3500 RPM to 8000 RPM. AFR's trademark 3/4" thick head deck makes them ideal for heavy nitrous or blower applications. With available optional nitrous or blower exhaust ports featuring 73cc ultra high flowing exhaust ports.

205cc SBF, Assembled - 58cc **AFR1450**
205cc SBF, Assembled - 72cc **AFR1458**

AFR 220cc Renegade SBF Race Cylinder Head

Are you looking for big torque and horsepower number? Only AFR's 220cc aluminium cylinder heads will provide you with exactly that. With the largest intake and exhaust runner volumes for our in-line Ford line up, these are the ultimate for NHRA Renegade or Hot Street classes. With lightweight 8mm 2.100 intake valves and 1.570 exhaust valves these heads move massive amounts of air. Combustion chamber volumes of 58cc or 69cc accompanied by 80cc exhaust ports which are raised .375 higher than stock. AFR's new 220cc is the perfect choice for 347 through 427 CI windsors engines operating between 4500 to 8500 rpm. Our trademark 3/4" thick cylinder head deck makes them ideal for heavy nitrous or blower applications.

220cc SBF, Assembled - 58cc **AFR1451**
220cc SBF, Assembled - 69cc **AFR1456**

CHI 3V 225cc

The 3V 225cc cylinder heads are suited for use on competition and serious street engines of up to 400+ cubic inches in size and making up to and in excess of 650+hp. The 218cc intake ports are designed to deliver maximum power and torque, for those people not concerned by RPM limitations, but rather wanting to make the most possible torque and horsepower for their competition to wild street power plants.

- CNC Combustion Chambers • Flows 340 CFM @ .700" Lift
- Supports up to 700 Horsepower • Accepts 2.150" & 1.650" Valves • Requires Special 3V Intake Manifold

CHI 3V 225cc Bare Heads **CHI-3V225**

CYLINDER HEADS

CHEVROLET SMALL BLOCK

Performer RPM S/B Chevy

Designed for 302, 327, 350 and 400 c.i.d. engines up to 1986 Heads with 64cc combustion chambers improve performance and retain stock compression ratio on 1970 and earlier small-blocks

Chamber Size	Intake	Valve Sizes (in/ex)	Bare (single)	Complete (single)

E-Street S/B Chevy

E-Street cylinder heads are an all new line of Edelbrock heads designed for entry-level street performance engines, ideal for operating in the idle to 5,500 rpm range. Every E-Street is assembled with manganese bronze valve guides, powder metal interlocking valve seats, stainless steel one-piece valves with hardened tips, 1.25" diameter valve springs, 3/8" screw-in studs and guide plates.

- Made in the USA
- Entry level street performance upgrade
- A356 aluminium treated to T-6 spec
- Larger than stock intake and exhaust ports for increased power
- Modern combustion chamber design for improved efficiency
- Heli-coil threaded inserts in the rocker stud
- Hardened valve spring cups for wear protection

RPM XTREME CYLINDER HEAD FOR SMALL-BLOCK CHEVY

This head is based on our popular RPM series of small-block Chevy cylinder heads. This head is equipped with 8mm stem LS1 style valves for reduced valvetrain weight and improved flow. These heads feature 185cc intake runners, 2.02" intake valves, 1.57" exhaust valves, 64cc chambers and the stock 23° valve angle. Will retain stock compression ratio on 1970 and earlier small-blocks.

RPM Xtreme Cylinder Head for S/B Chevy (complete) ED51899

Chapman Victor 23° High-Port CNC

Chapman Victor 23-degree heads are fully CNC machined by Chapman Racing Heads, a leader in cylinder head porting and preparation. These heads are ideal for high-output small-block competition engines that require higher flow than a traditional standard port head can offer and are fully CNC ported intake runner, exhaust runner and combustion chambers. The valve cover rail has been raised +.600" and requires +.200" long valves and .350" offset intake rocker arms are required.

Chamber Size	Intake Port Size	Valve Sizes (in/ex)	Bare (single)	Complete (single)
71cc	238cc	2.125"/1.625"	ED61209	

E-CNC 230 Cylinder Heads For Chevy LS3

Our E-CNC LS3 Cylinder Heads are a great general-purpose high performance cylinder head for any street-strip LS engine. These cylinder heads have a high velocity port compared to stock LS3 cylinder heads, making them an ideal upgrade for any cathedral port or 3.89" bore LS application. They feature an improved design and casting that gives cylinder head porters more material to work with compared to stock heads. Like all of our other E-CNC cylinder heads, these feature fully CNC'd intake ports, combustion chambers and exhaust ports for improved performance. Compatible with stock style rocker arms.

Edelbrock LS1 Pro-Port™ Cylinder Head

Designed, engineered and cast with porting in mind, the Edelbrock LS1 Pro-Port™ cylinder head is the perfect casting for any custom cylinder head porter. Cylinder head porters and engine builders alike now have an affordable LS1 casting that will enable them to create new port configurations, never before possible with the thin, lightweight factory castings. The LS1 Pro-Port™ cylinder head casting is the same high-quality casting that Edelbrock has designed for use in our Edelbrock/Lingenfelter CNC ported LS1 cylinder head. The LS1 Pro-Port™ has been beefed-up with extra material in all critical areas for unmatched durability in purpose built applications. The Edelbrock #61989 Pro-Port™ casting opens the door to creating small-to-large port configurations ensuring 100% clean-up in the porting process, producing high flowing, and high velocity air-flow numbers. Every LS1 cylinder head specialist will find this high-quality, robust casting the casting of choice when it comes to carving out their own custom ports. Requires professional cylinder head preparation.

RPM XTREME CYL HEAD FOR BIG-BLOCK CHEVY

These Edelbrock RPM Xtreme cylinder heads are ideal for high performance street and entry-level racing applications. They combine casting design and custom CNC technology to achieve optimal airflow and maximum horsepower and torque. These RPM Xtreme cylinder heads are given a fully CNC-ported combustion chamber and bowl area for port-to-port consistency and smooth transitioning into the valve seat, while the intake and exhaust runners are partially ported for improved airflow. Edelbrock RPM Xtreme cylinder heads are completed with high-quality springs, stainless steel valves, and heli-core inserts in the exhaust flange and rocker stud bosses. All of these features are united by a company dedicated to deliver you extreme power at a lower cost than you would expect and made-in-the-USA quality

ED51459 RPM Xtreme 300cc intake runners (2.25/1.88) 114cc chamber

ED51539 RPM Xtreme 356cc intake runners (2.30/1.88) 110cc chamber

CHRYSLER SMALL BLOCK & BIG BLOCK Performer RPM Chrysler Magnum Heads

Designed for 1992 & later 5.2L (318 c.i.d.) and 1993 & later 5.9L (360 c.i.d.) Chrysler Magnum style V8s. Stock Magnum intake and exhaust flange and port locations make this an ideal choice for use with stock equipment as well as the new RPM Air-Gap Magnum manifold #7577. Must use adjustable aftermarket rocker arms

Chamber Size	Intake Port Size	Valve Sizes (in/ex)	Complete (single)
58cc	176cc	2.02"/1.60"	ED61779*

Note: Requires hardened push rods. Match with our new RPM Air-Gap Magnum manifold #7577.

Performer RPM Chrysler & Chrysler 340

Performer RPM Chrysler is designed for non-emissions 1967-85 Chrysler 318-340-360 c.i.d. engines. Performer RPM Chrysler 340 is designed for non-emissions 1968-73 340 c.i.d. Chryslers. Performer RPM Chrysler 340 chambers are machined .060" for piston-to-head clearance with early high-compression 340 engines

Chamber Size	Intake Port Size	Valve Sizes (in/ex)	Complete (single)

84cc	210cc	2.14"/1.81"	ED60929*
88cc	210cc	2.14"/1.81"	ED60189*

Note: Some headers will not clear spark plugs

SB Chrysler, Victor, CNC, In-line 16°

Complete with Hydraulic Roller or Flat Tappet Springs

These heads are for use on 1967-1991, 318-360 c.i.d. Chrysler LA engines. They feature fully CNC intake, exhaust ports, combustion chamber and have an intake port volume of 225cc. These heads are an in-line valve design incorporating a 16° valve angle (stock is 18°) for improved air flow and increased power levels over heavily ported stock versions. They also feature the Chrysler W5 bolt pattern and have raised exhaust ports. The intake port has also been raised approximately 3/4" and the flange has also been extended to accommodate a stock (race) intake manifold such as our Super Victor #2815. Finally, a 5.56" overall length valve (+0.600" from stock) and raised rocker cover permit larger port cross-sections than in the stock head. Four versions are available; bare, bare with valves, complete (for hydraulic/flat tappet cams and solid roller cams) and Pro Port Raw. End-seal spacers are provided.

ED61709	Bare
ED61719	Bare, with valves
ED61729	Complete, solid roller
ED61739	Complete, hydraulic roller

Chrysler 440 Edelbrock E-Street Cylinder Heads

This E-Street cylinder head is ideal for entry-level street performance 1961-79 Chrysler 361-440 c.i.d.

Wedge engines operating in the idle to 5,500 rpm range. The 75cc combustion chamber allows this head to be used with stock pistons, retaining the 9.5:1 compression.

The modern combustion chamber design also improves the combustion process and the larger than stock intake and exhaust ports move more air through your engine. These features improve the engine's efficiency, resulting in more horsepower and torque. Manufactured in the USA, by Edelbrock, these heads feature A356 aluminum castings that are heat treated to T-6 spec for superior casting strength and quality. Additional qualities include hardened spring cups for long-term wear protection and Heli-Coil® threaded inserts in the rocker shaft bosses for increased strength; these are the details that most low-cost competitors leave out of their heads. These cylinder heads are sold in complete pairs.

The modern combustion chamber design also improves the combustion process and the larger than stock intake and exhaust ports move more air through your engine. VICTOR BIG-BLOCK CHRYSLER HEAD

Featuring 280cc intake ports and 100cc exhaust ports, these race heads are designed to fit all B and RB Chrysler engines. Equipped with raised valve cover rails and dual quench 75cc combustion chambers, they fit existing Victor manifolds for both high and low deck engines, and can be machined to match Max Wedge ports.

CHRYSLER HEMI VICTOR JR. CNC CYLINDER HEADS

Our new Victor Jr. Cylinder Heads are designed for high output 650+ HP Chrysler 426-572 HEMI engines. They feature fully CNC'd combustion chambers and CNC blended seats for optimal air flow performance. These cylinder heads also feature a revised exhaust valve angle to accommodate larger intake valves. They also feature brass tubes installed in exhaust pushrod holes to allow maximum clearance with minimal port intrusion.

VICTOR JR. CNC CHRYSLER 426-572 HEMI FEATURES:

- Victor Jr. CNC cylinder heads #61175 and #61179 are complete and ready to run right out of the box.
- Victor Jr. CNC cylinder heads #61169 are bare and supplied with reamed and semi-finished valve stem guides. They will require finishing on the valve stem guides and a valve job before installation.
- Victor Jr. CNC cylinder heads #61189 are shipped with reamed and machined valve stem guides, as well as a valve job to match the included intake and exhaust valves (valves not installed). Customer must supply their own valve springs, retainers, valve stem seals and valve locks.

VICTOR MAX WEDGE

• Intake ports are machined to match Max Wedge intake manifolds for B and RB competition big-block Chryslers

• Intake ports are raised .650", exhaust ports are raised .250" for improved flow • The intake flange is extended .950" to eliminate the need for intake spacer plates • Standard 15-degree valve angles with 290cc intake and 100cc exhaust ports

• Exhaust flange is extended .300" from stock (same as Mopar Stage 6) featuring dry exhaust bolt holes with HeliCoil® thread inserts • Raised valve cover rails and dual quench 75cc combustion chambers • Sold without springs or retainers; use recommended springs to match your cam

Chamber Size: 75cc Intake Port Size: 290cc

E-Street S/B Ford

E-Street cylinder heads are an all new line of Edelbrock heads designed for entry-level street performance engines, ideal for operating in the idle to 5,500 rpm range. Every E-Street is assembled with manganese bronze valve guides, powder metal interlocking valve seats, stainless steel one-piece valves with hardened tips, 1.25" diameter valve springs, 3/8" screw-in studs and guide plates.

- Made in the USA
- Entry level street performance upgrade
- A356 aluminum treated to T-6 spec
- Larger than stock intake and exhaust ports for increased power
- Modern combustion chamber design for improved efficiency
- Heli-coil threaded inserts in the rocker stud
- Hardened valve spring cups for wear protection

60cc	205cc	2.08"/1.60"	ED5028

(ED5028 uses Hyd Roller cam)

RPM Xtreme S/B Ford

The RPM Xtreme for small-block Ford is an all new design that is CNC ported where it counts to achieve optimal air-flow for maximum horsepower and torque in high performance street and light duty racing applications. The RPM Xtreme is treated to a fully CNC ported 59cc combustion chamber, and then CNC ported in the bowl area for a smooth transition into the valve seat. The intake runner entries and exhaust runner exits are partially CNC ported for improved air-flow.

- Made in the USA
- Lightweight 8mm valves & titanium retainers
- Conical valve springs
- 18° valve angle for maximum performance
- CNC combustion chambers
- Partially CNC ported

Victor Ford

Designed for ultra high-performance and large displacement small-block Fords (high rpm 302s to 351 and larger Windsor) Extended intake flange works with Victor Series manifolds using end-seal spacers #7726. 240cc intake ports are raised .375" and measure 2.10" tall by 1.16" wide as-cast

Chamber Size	Intake Port Size	Valve Sizes (in/ex)	Bare (single)	Complete (single)
47cc	240cc	2.125"/1.625"(B)	ED77219*	

End Seal Spacers (1 pair, required for Victor Ford cylinder heads) ED7726. Note: These heads have not been port-matched or bowl-blended and require professional head preparation.

Edelbrock/Glidden Victor CNC

Designed in conjunction with Billy Glidden, the combination of altered valve locations and Glidden chamber design produces maximum power in ultra high-performance S/B Fords. Fully CNC-ported by Chapman Racing. Capable of over 750 hp from 360-inches out of the box. Exhaust ports raised .630" for a straighter exit, require Edelbrock header flanges ED7722. Legal for NMRA Hot Street, Super Street Outlaw and Pro 5.0 classes

FORD FLATHEAD CYLINDER HEADS

Original design Edelbrock flathead cylinder heads for Fords and Mercurys. Rugged, ribbed internally and externally, with a large water capacity and excellent breathing characteristics. Made of A356 aluminum and T-6 tempered. 8.0:1 compression ratio on blocks with a 3/16" base relief (stock bore and stroke). Compression ratio increase is approximately 3/10 of a percent with each 1/8" stroke.

FORD FLATHEAD Pair of heads

VALVES

BRIAN CROWER VALVES

BC valves are one piece design with a friction welded Stellite tip for the best possible performance. Every valve is made from premium grade, heat resistant stainless-steel material to insure reliability with high boost and/ or high rpm applications. The undercut stem above the head area not only reduces overall weight for extended rpm potential, but also significantly improves airflow in and out of the combustion chamber. Every valve is fully machined and features a swirl polished finish under the head.

Ferrea RACING COMPONENTS

TITANIUM VALVES

These valves are used in professionally built high rpm (above 8000) roller or flat tappet racing engines. Applications include Drag Racing, NASCAR, Oval & Sprint Car, Road Racing, and Motorcycle.

AVAILABLE BY SPECIAL ORDER. PLEASE CALL ROCKET

SUPER ALLOY VALVES

Special extreme duty Hi-Temperature Exhaust Valves. For use in Top/Fuel, Funny/Car, Supercharged, Nitrous, NASCAR, Sport Compact, Off-Shore Marine, 9.0 to 1 compression restricted carburetor motors (extreme exhaust temperature present).

COMPETITION PLUS VALVES

Extreme duty racing valves, engineered for high rpm, high horsepower racing engines. They have exclusive features, which makes them the best flowing valve on the market with unequalled performance and reliability. Drag Racing, NASCAR, Oval & Sprint Car, Road Racing, Sport Compact, Motorcycle and Off-Shore Marine.

BRAIN CROWER VALVE LOCKS

Billet performance valve stem keepers or locks are designed to fit BC and OEM retainers.

Precision machined from premium billet bar stock chromoly steel and heat treated for maximum strength to insure against shoulder shearing (common with stock and lesser quality brands).

Description	Part No
Mitsubishi 4G63/Evo Billet 6º	BC2944
Nissan RB26 Billet 6º	BC2946
Nissan SR20 6mm stem	BC2945

BRONZE VALVE GUIDE

BC premium valves guides are made from Manganese Silicon Aluminum Bronze alloy and CNC machined to exacting tolerances. BC guides are resistant to cracking and corrosion, while reducing friction and insures high lubrication even at elevated engine temperatures and rpm's. The perfect replacement to worn or damaged guides and 100% compatible with BC's lineup of stainless steel valves.

Description	Part No

ISKY VALVE LOCKS

ISKY Heat Treated Locks with the proper taper angle grip your valve retainers with greater locking force and will out tensile anything on the market today. They are an absolute must for today's HI-RPM racing engines. Don't take chances with blackened or plated stock type locks masquerading as genuine heat treated ISKY. The safety of your racing engine demands only the best...ISKY CHROME MOLY VALVELOCKS.

Super 7º Valve Locks

Designed for maximum endurance in roller cammed Oval Track, Road Racing and Drag Racing applications where maximum locking force with the valve stem is required. These heavy-duty valve locks are also machined from 4140 Chrome Moly Bar-Stock and heat treated like our standard 7 deg. valve locks shown above. Super 7º Valve Locks incorporate a ground finish on the O.D. which allows a more consistent installed height for each retainer on its valve. Super 7º deg. valve locks are used in conjunction with Isky Super 7º retainers only.

Super 7º BEAD Locks

With the increased use of Radius "Bead" Groove Titanium Valves in the most demanding Oval track Endurance Applications, we are now offering Compatible Super 7 Deg. "Bead" Valve Locks. As with all Isky Valve Locks, Bead Locks are machined from 4140 Chrome Moly Bar Stock and heat treated for maximum strength and will fit all Isky Super 7 Deg. Retainers (Steel & Titanium).

STEM DIAMETER	INST. HEIGHT	PART NUMBER

"BEAD" Valve Lock Suit LS1

Designed for Maximum Endurance in roller cammed LS-1 engines, these heavy-duty valve locks are machined from 4140 Chrome Moly Bar-Stock and heat treated. They incorporate a ground finish on the OD, which allows a more consistent installed height over "stock" Stamped LS-1 Valve Locks. Suit Retainers, ISK135-ST, ISK185-ST

Ferrea XR6 Turbo 7º STEEL Valve Locks

Ferrea Valve Locks are manufactured from high quality 4140 chromoly bar stock and machined to exact tolerances. The locks are heat-treated for maximum strength and finished with the black oxide for an attractive appearance.

FVK10078-24	Ford XR6 Turbo 6mm 7deg H/Duty Locks
-------------	--------------------------------------

BILLET PERFORMANCE 7º VALVE STEM KEEPERS

Crower billet performance valve stem keepers are precision machined from premium billet bar stock chrome moly steel. Heat treated for maximum strength to insure against shoulder shearing (common with stock and lesser quality keepers). In addition to our standard height, we also offer .050" higher and .050" lower to achieve the correct installed spring height. Each variation is color coded for identification. Serious engine builders should have a complete selection on hand at all times.

VALVE STEM SEALS

ISKY VALVE STEM SEALS

ISKY Valve Stem Oil Seals positively control unwanted oil flow through the valve guides. No machining required for assembly. Ideally suited when installing our Part No. 4905 Dual Spring Assembly LS1 Guide Seal, 5/16" Valve Stem

ISKIVS-400

Valve Stem Oil Seals

COMP Cams offers a complete line of valve stem seals, from the stock GM O-ring to the positive-stop Teflon seal. These seals are a must to keep unwanted oil from entering the combustion chamber through the clearance in the valve guides. The o-ring seals use the standard retainer and oil splash shield. We also have a smaller diameter Viton seal available for triple spring applications.

Description	Valve Size	Guide Size	O.D	Part No.
O-Ring	11/32"	Stock	.400"	C0501-16

AFR REPLACEMENT VALVE STEM SEALS

These afr replacement valve stem seals are a must to keep unwanted oil from entering the combustion chamber through the clearance in the valve guides. They are manufactured from viton® to give you the tightest seal possible. The AFR replacement valve stem seals are designed to work in all afr Aluminum cylinder heads.

AFR6612-1 LS1 VALVE STEM SEALS .530 X 8MM (EACH)

LASH CAPS

Lash Caps

COMP Cams lash caps are precision machined and ground perfectly flat to maintain accuracy of valve train adjustment. A special version is available for Chrysler Hemi engines to accommodate the very short tip on these valves. For the ultimate in strength and reliability, you will not find a better part than the COMP Cams Lash Cap. A must for titanium valves.

Description	Height	Thickness	Stem	Part No.
426 Hemi (Short Cap)	0.190"	0.080"	5/16"	C0619-16
Hardened Lash Cap	0.230"	0.080"	5/16"	C0620-16
Hardened Lash Cap	0.210"	0.080"	11/32"	C0621-16
Hardened Lash Cap	0.190"	0.080"	3/8"	C0622-16
Hardened Lash Cap		.080"	8mm	C0633-16

CROWER LASH CAPS

Crower lash caps protect the ends of your valves from excessive wear and help to correct rocker geometry by increasing rocker arm to retainer clearance. Machined from high grade chrome moly steel and heat treated for added strength, Crower lash caps give your valves an added .060" margin of protection. Highly recommended for performance applications, and a must for costly stainless steel or titanium valves.

Part No.	Description	Depth
C86120-16	5/16 valve stem (Set/16)	.090"
C86121-16	11/32 valve stem (Set/16)	.120"

C861225-16	3/8 valve stem (Set/16)	.060"

VALVE SPRINGS

Brian Crower

BRIAN CROWER VALVE SPRING & RETAINER KITS

Designed for high rpm, and high lift camshafts, BC valve spring & retainer kits are designed to fit with no machining required. These kits feature titanium retainers and BC springs which are wound from only the highest grade, super clean, chrome silicone alloy. For high mileage street applications these kits are also available with steel retainers by adding an "S" to the end of the part number.

PSI VALVE SPRINGS BY ISKY CAMS

You can trust PSI (Performance Springs Inc.) Valve Springs to out-perform all others because they are exclusively 100% American Made using the finest materials, the best CNC Equipment and state-of-the-art trade secret processing. Don't settle for those foreign-made springs of lesser quality. Insist on genuine PSI Drag Race Valve Springs and get into the winners circle!

SPECIAL PROCESSING "SP" SERIES HIGH ENDURANCE Valve Springs

The "SP" series utilizes "Hi-Tensile" Chrome Silicon outer spring material. For applications with radical cams and/or moderately high rpm, where traditional chrome silicon springs prove inadequate, the "SP" series is the next highest level of endurance. All "SP" series springs are Spintron Test-Proven up to 8000 rpm for 700 racing miles.

Part No.	Style	Outer OD/ID	Inner OD/ID	Seat Pressure	Open Pressure	Rate Per Inch	Coil Bind	Max. Net Lift	Type of Cam

1600 SUPER-RAD RACING VALVE SPRINGS

Designed for use in the most grueling, sustained high rpm oval track environments, marathon grade Super-RAD Tool Room valve springs are manufactured from a revolutionary new Alloy steel. They employ precision nitride heat treating to enhance their longevity well beyond anything ever seen before in an endurance racing valve spring. Simply put, the 1600 Super RAD Series succeeds where other valve springs fail! Test proven in the ISKY Research LAB under Spintron Test III parameters, Super Rad's take endurance to the next level beyond our 9900 RAD Series.

RAD-9000 TOOL ROOM RACING VALVE SPRINGS

Introducing Isky's new RAD-9000 process option for Tool Room valve springs. Under trade secret Radial-Densification (RAD), the physical properties of Tool Room springs are optimized for even greater surface to core uniformity. To insure they'll withstand the tortures of sustained high rpm operation, we subject each batch to the most rigorous real world test standard ever created, SPINTRON-TEST II.

B-HIVE VALVE SPRINGS - LS1 & SBC

We are now offering two high performance "B-HIVE" Valve Springs that are "drop-in" replacements for the Stock LS-1 "B-HIVE" spring. Both Springs are compatible with stock retainers and locks... but we highly recommend for increased performance, the use of our ISK135-ST steel retainer and ISKVL-500 Machined Bead Locks for LS-1 engines. These springs also suit early Chev Small Block engines when used with ISK165-ST steel retainers ISKVL-32 locks.

Part No.	Style	Top OD/ID	Bottom OD/ID	Seat Pressure	Open Pressure	Rate Per Inch	Coil Bind	Max. Net Lift	Type of Cam

ISK195-A	B-Hive w/ Round Wire	1.015" .630"	1.290" .905"	120 lbs	360 lbs	380	1.100"	.625"	Hydraulic Roller

LS1 VALVE SPRING & RETAINER KITS

We are pleased to introduce High Performance Valve Spring Kits for the Late Model LS-1 Small Block Chevy (4800, 5300, 5700 & 6000) V8 Engines. Kits come complete with Valve Springs, Steel or Titanium Retainers, machined "Bead Locks," tempered shims and spring locators. When removing the stock LS-1 "Conical" Valve Springs and replacing with Isky "Damper" springs, it is also mandatory to install Isky retainers, locators and shims. While Isky 707-ST and 57-Ti retainers are compatible with the stock LS-1 "stamped" bead locks, Isky "Bead Locks" are more desirable as they are machined from chrome moly steel and heat treated for maximum pull-through strength!

Kit Part No.	Valve Springs	Seat Pressure	Open Pressure	Retainers	Bead Locks	Spring Locators	Micro Shim Kit	Max Lift
ISK13800	Single w/ Damper	135 lbs @ 1.775"	350 lbs @ 1.175"	ISK707-ST (steel)	ISKVL-500	ISK295-VSL	ISK11	.600"
ISK13900	Single w/ Damper	135 lbs @ 1.775"	350 lbs @ 1.175"	ISK57-Ti (titanium)	ISKVL-500	ISK295-VSL	ISK11	.600"

LS1 DUAL SPRINGS

When looking for maximum reliability, nothing beats a dual valve spring. Our New Part No. ISK4905 is a drop-in installation with no machining required. Also available is the larger diameter ISK6105-SP for engines that need a higher seat pressure. Manufactured from a special Hi-Tensile Chrome Silicon Alloy, these springs yield maximum reliability in LS-1 Hydraulic Roller Cam Applications and will handle up to .650" Valve Lift. When converting to dual springs, matching steel retainers, spring locators and valve seals (listed below) are required.

Valve Springs	Steel Retainers	Spring Locators	Valve Seals	Outer OD	Inner ID	Seat Press.	Open Press.	Coil Bind	Max Lift

BEEHIVE VALVE SPRINGS

COMP Cams Beehive Valve Springs deliver increased valve train stability and a much lighter valve train. This is achieved with less spring pressure for better valve control and reduced weight of both the spring and the retainer. For street/strip applications, these valve springs are the best choice possible. Because of the unique Beehive design, the valve train can handle more rpm and more aggressive cam profiles for occasional bracket racing but still retain durability for street driving.

LS Engine Beehive Valve Spring Kit

This Beehive Valve Spring Kit for LS engines is designed for hydraulic roller cams and includes carefully matched Beehive Springs, steel retainers, locks, seals and spring seats. With a .625" maximum lift, these

Beehive™ Valve Springs deliver increased valve train stability and a much lighter valve train. This is achieved with less spring pressure for better valve control and reduced weight of both the spring and retainer. The unique Beehive™ shape handles valve train stress more efficiently to eliminate damaging harmonics and increases high RPM horsepower and durability. The oval/multi-arc wire shape places the maximum area of the wire at the point of highest stress to handle valve train stress more efficiently and allow better heat dissipation for longer life.

Description	Part No.
LS Engine Beehive Spring Kit, .580" Lift, Steel Retainers	C026909CS-KIT
LS Engine Beehive Spring Kit, .600" Lift, Steel Retainers	C026918CS-KIT

LS Engine Dual Valve Spring Kits

This Dual Valve Spring Kit for LS engines includes carefully matched Dual Valve Springs, titanium retainers, locks, seals and spring seats. With a .675" maximum lift, these COMP Cams® Dual Valve Springs for race applications are manufactured from Super Clean™ wire and subject to extensive quality control testing to deliver a valve spring assembly with superior strength, durability and valve train stability, no matter the application. The dual spring design creates a stronger valve spring that can easily handle the increased lift found in extreme stress applications. COMP Cams® Dual Valve Springs exceed the expectations of today's engine builders and racers

VALVE SPRING RETAINERS & ACCESSORIES

Steel Retainers

COMP Cams steel retainers are precision machined from 4140 chrome moly and finished in black oxide. These precision retainers are specifically designed for positive location when combined with COMP Cams high-quality valve springs. For superior strength and ultimate stability, we offer our 10° Super Lock Retainers and our 10° Super Locks.

Titanium Retainers

COMP Cams titanium retainers are American made from the finest 6AL4V alloy for maximum stiffness and minimal warpage. The 6AL4V alloy is heat-treated and processed to a stringent tolerance. COMP Cams titanium retainers will not deform. From a standing idle to the most extreme rpm, our titanium retainers perform flawlessly, without compromise.

TOOL STEEL LIGHTWEIGHT VALVE SPRING RETAINERS

These COMP Cams tool steel valve spring retainers are lightweight, high-strength, and have excellent wear characteristics. They are 30 percent stronger than conventional chrome moly steel retainers and can withstand even the most demanding engine rpm ranges. Manufactured from high-grade tool steel, COMP Cams' tool steel valve spring retainers are the right components to instantly add reliability to your valvetrain.

Valve Spring Cups

Valve Spring Cups locate the outside diameter of the valve spring in relation to the Valve Guide. Manufactured from Chrome Moly Steel, then heat treated for maximum durability. They are designed to fit over .625" O.D. Valve Guides. NOTE: Spring seat area must be enlarged when installing Spring Cups.

OD	ID	ID	Thickness	Part No.
1.660"	1.540"	.630"	.060"	ISK900-SC

1.750"	1.670"	.630"	.060"	ISK990-SC

Valve Spring Shim Kits

Precision shim kits for the mechanic who desires perfection in installing racing valve springs to a precise height. Each shim is made from tempered steel for maximum strength.

OD / ID	Contents	Part No.
1.560" x .625"	24 x .010", .015", .020", .030"	ISK8
1.625" x .625"	32 x .015", .030"	ISK9
1.220" x .505"	16 x .015", .030"	ISK11

Spring ID Locators

COMP Cams Spring ID Locators will not only protect the head and shim, but also locate and hold the spring in place. Previously, this part has been available only in a cup form with the retaining portion being on the outside of the part. This required that the head be machined a great deal to accept this cup. A new I.D. locator with the locating shoulder on the inside is now available.

BB Chev Exhaust

Rotator Eliminator

Late model Big Block Chevrolet engines are originally equipped with exhaust valve rotators. Until now, the only way to make up for the rotator was to stack .300" of shims under the spring. This was not only sloppy, but they also didn't fit well. These seat spacers offered by COMP Cams will locate the spring with an outside step so the spring cannot "walk" around on the head.

O.D. Spring O.D. Spring I.D. Thickness Part

Pontiac V8 350-455 - 7/16" Stud	1.65	SCP1053BL

ENDURANCE SERIES

Endurance Series rockers have all Race Series features PLUS:
 •Lighter weight for faster RPM gain - average 28 grams lighter than Race Series rocker arms
 •Lower profile than Race Series rocker arms for better fitment under most stock valve covers
 •Shorter polylocks than Race Series polylocks for better valve cover clearance
 •NEW - Adjustable pedestal mount rockers

JESEL ROCKER SYSTEMS

SPORTSMAN SERIES

Jesel's affordable SS shaft rocker systems are designed to fill the needs of sportsman Rocker arms are CNC profile-machined out of 2024 alloy aluminum and fitted with full complement shaft needle bearings, pressed-pin nose rollers and heat treated valve adjusters. These rockers have valve spring relief pockets and profiled tails to fit under most popular valve covers.

Pro Series Shaft Rocker

Walk through the pits of any professional racing venue and you would be hard pressed not to find a JESEL Pro Series rocker system controlling the valvetrain. For over 28 years, championship winning racers in virtually every form of racing from NHRA Pro Stock to Sprint Cup rely on JESEL shaft rockers to get them into the winners circle. Used by top engine builders worldwide, JESEL rockers continue to set the standard by which all others are measured.

Heavy-Duty Extruded Aluminium Roller-Rocker Arms

Designed for up to 10,000 RPM. This heavy duty design features an oversized body and fulcrum with a triangulated profile for additional rigidity and strength. Accommodates most oversized valve springs. American-made roller bearings are in self-contained bearing-cups for extra low friction wear. Each set includes 16 extruded aluminium roller rockers and 16 poly locks. If you would like to order a single roller rocker, please use your applicable part number and add a "P" at the end (ie "67708P").

Fits Chevy™ small block engines.
 PR66930 1.5 Ratio, 7/16" Stud

Extruded Aluminium Roller-Rocker Arms

Rid your engine of internal friction with roller-tipped rocker arms. The race-proven full needle bearing, fulcrum and roller tip not only unleash horsepower, they also lengthen valve train component life and reduce wear and tear on valve stem tips. Precision machined to insure consistency and ratio accuracy.

16 extruded aluminium roller rockers and 16 poly locks.
 Fits Chevy small block engines.
 PR66907 1.5 Ratio 3/8" Stud
 PR66908 1.6 Ratio 3/8" Stud
 PR66909 1.5 Ratio 7/16" Stud
 PR66910 1.6 Ratio 7/16" Stud

Fits Chevy S/B engines w/ center hold-down valve covers.

PR66914 1.5 Ratio 3/8" Stud, Self Aligning
 PR66915 1.6 Ratio 3/8" Stud, Self Aligning

Fits Ford small block engines.

PR66911 1.6 Ratio 3/8" Stud
 PR66912 1.6 Ratio 7/16" Stud

Fits Ford 302 Boss 351C, 429-460.

PR66861C 1.73 Ratio 7/16" Stud

Fits Chrysler. Supplied with hardened shaft and hardware.

PR66869 1.5 Ratio for S/B
 PR66868 1.5 Ratio for B/B

Fits Holden & Pontiac.

PR67482 1.65 Ratio 7/16" Stud

Stamped Roller-Tip Rocker Arms

The super affordable way to reduce internal valve train friction and valve stem wear. Extra long slot eliminates rocker to stud interference when using high lift cams. 16 rockers, anti-gall grooved balls and nuts per package.

Fits Chevy small block engines.
 PR66906B 1.5 Ratio 3/8" Stud
 PR66922 1.5 Ratio 3/8" Stud
 PR66924C Replacement Grooved Ball & Nuts for 3/8"-24 Thread Studs

GM LS ROCKER ARMS

These AeroFlow Performance OEM GM LS rocker arms install easily on your LS cylinder heads without any modifications and a direct OEM (GM10214664) replacement style. The rocker is a pedestal mount, roller fulcrum style, and are made of ductile iron construction. Each rocker also features an oil slot design to priority feed the roller needle bearings and keep them cool for long lasting durability and performance. All rocker arms are moly coated for wear resistance and smoother low friction operation. Each kit comes complete with 16 rocker arms and 16 OE hex bolts. Available in either straight or offset design to suit all GM LS series engines.

AF95-1000 GM LS1/LS2 Rocker Arm Ratio: 1.7
 AF95-1001 GM LS3
 AF95-1002 Replacement set of 16 hex bolts.

GM LS3 ROCKER ARM STANDS

The AeroFlow Performance Billet GM LS rocker arm mounting stands mount between the shaft and cylinder head for the correct rocker arm mounting position. These are constructed from 7075 billet aluminium to ensure longevity, while also reinforcing them for more rigidity in high-horsepower and boosted applications. These bars are designed to help with rocker arm control and cut back on flex and distortion that is imposed from the valvetrain. Bars will fit stock and aftermarket LS3 heads but if these are used on an OEM cylinder heads not all casting are the same and they may require some slight modifications. When installing these ensure to check rocker geometry and pushrod length.

AF95-1003 GM12600936 Sold in pairs

STREET TERRA ROLLER ROCKER SETS

The Street Terra series are the entry level rockers that give you the performance benefits of the famous premium Yella Terra Roller rockers used by racers worldwide for over two decades, for a fraction of the cost. Street Terra rockers feature high density cast alloy arms and are recommended for engines with maximum spring pressures up to 400lbs.

YELLA TERRA ROLLER ROCKER SETS

Yella Terra Roller Rockers have proven to be so reliable and durable since 1983, with the ultimate in design and proven by racing teams to give more power and reliability than other products. The strongest aluminium rocker arms in the world with deflection and bend tests proving their aircraft grade extruded aluminium arms superior to rival aluminium and stainless steel arms. They are the ultimate rocker arm for use in high revving street engines and most race applications.

PLATINUM SERIES ROLLER ROCKER SETS

The Platinum Race rockers are designed for the most severe race applications and have the feature of wide body arms for even greater strength and resistance to deflection. All Platinum rockers feature a heavy duty 7/16" mountings for unsurpassed rocker stability. The Platinum rockers are available in twin shaft versions for parallel valve applications and unique single shaft designs for canted valve small block and big block engines.

HIGH ENERGY STEEL ROCKER ARMS

High Energy™ Rockers help eliminate the noise and slop associated with older worn and high mileage stock rocker arms. With a long slot for higher than stock lift camshafts, these rocker arms are an excellent replacement choice for engine rebuilds using either stock or High Energy Camshafts.

Application	Stud	Ratio	Part No.
SB Chev 265-400	3/8"	1.5	CO1212-16

Magnum Rocker Arms

COMP Cams Magnum Roller Rockers are the ultimate street rocker. That's because they were designed with the serious performance enthusiast in mind. They will help your engine make more power and last longer. Magnum Roller Rocker Arms are made from 8620 chromemoly steel. This makes them stronger than die-cast aluminium or stamped steel rockers. This superior material, along with the Magnum's super stiff design, assures maximum lift because this rocker arm will not flex.

GM LS UPGRADED OEM ROCKER ARMS

Stock LS rocker arms can experience cageless needle bearing failure when loads are increased. COMP Cams® engineers have solved this problem with upgraded rockers featuring a stronger and more durable trunnion and captured bearing design. These upgraded versions increase each rocker's lift capacity and utilize caged roller bearings to improve valve train durability. The trunnions are secured by snap rings. The rockers feature a black-oxide finish and are available for LS1, LS3 and LS7 valve train geometries. A DIY upgrade kit is also available for users with stock rockers. It features a magnetic installation tool, and its cylindrical construction is perfect for use in an arbor press, bench vice or c-clamp.

Description	Part No.
GM LS Upgraded OEM Rocker Arms (LS1)	CO1477-16
GM LS Upgraded OEM Rocker Arms (LS3)	CO1478-16
GM LS Upgraded OEM Rocker Arms (LS7)	CO1479-16

MAX-LIFT BSR SHAFT ROCKER SYSTEMS

COMP Cams introduces another industry first with their Max-Lift BSR Shaft Rocker Systems™, a bolt-in bushed shaft rocker system for GM LS applications that increases system stiffness and allows LS platforms to achieve higher levels of performance. By tying all eight rocker arms together on a single shaft that fits in the stock rocker stand, COMP Cams has found a way to improve valve train dynamics, increase valve train stiffness and reduce deflection. The use of a tri-layer bushing instead of needle bearings also reduces deflection and eliminates the high Hertz loading that is present in needle bearing trunnions, for more rigidity and durability. In a first for the LS market, provisions are included for optional pressurized oiling to further improve rocker arm durability and performance. The increased valve train stiffness provided by the COMP Cams Max-Lift BSR Shaft Rocker Systems makes the same camshaft perform like a slightly larger camshaft as more of the lobe lift is transferred directly to the valve, instead of being absorbed by deflection in the cylinder head and single-bolt rocker mounting design. The system will also allow the use of higher lift, more aggressive camshafts before the valve train goes out of control.

Pro Magnum LS1-LS2-LS6 Rocker Arm Kits

COMP Cams offers four GM Gen III/LS1/LS2/LS6 bolt-on rocker arm kits all of which include Pro Magnum Rocker Arms (1.75:1 or 1.85:1), guide plates (5/16" or 3/8"), rocker studs, adjusting nuts and set screws. Designed to fit under the stock valve covers without machining, COMP Cams Pro Magnum Rocker Arm Kits are the simple solution for upgrading the valve train components in your GM Gen III/LS1/LS2/LS6 engine.

Description	Part No.
Rocker Arm Kit, 1.75:1 Ratio, 5/16" Guide Plates	CO13755-KIT
Rocker Arm Kit, 1.85:1 Ratio, 5/16" Guide Plates	CO13705-KIT

GM LS ULTRA PRO MAGNUM ROCKER ARM KITS

COMP Cams offers GM Gen III LS1/LS6 and Gen IV LS3 Ultra Pro Magnum Rocker Arm Kits, both of which include rocker arms, guide plates, rocker studs, adjusting nuts and set screws. Designed to fit under the stock valve covers without machining, COMP GM LS Ultra Pro Magnum Rocker Arm Upgrade Kits are the simple solution for converting your GM Gen III/IV engine to an adjustable valve train.

COMP Cams

High Energy die cast aluminium rocker arms

Finally, high performance without a high price--COMP Cams High Energy die cast aluminium rocker arms. COMP Cams, a leader in valvetrain technology, has developed these High Energy rockers to provide superior strength to weight ratio to withstand the hardships of your street performance and mild race engines while adding valve lift. These die cast aluminium, larger-than-stock rocker bodies are designed to be stiffer and more durable. They feature needle bearing fulcrums and roller tips to reduce friction and lower oil temp for even more horsepower potential. Maybe you're on a budget or maybe you just appreciate getting the most for your coin; make an affordable choice without sacrificing performance--COMP Cams High Energy die cast aluminium rocker arms.

COMP Ultra-Gold Aluminium Rocker Arms

COMP Cams proudly introduces the new Gold Standard in stud-mount, aluminium roller rocker arms - the Ultra-Gold. Designed specifically for high performance street and race engines, the Ultra-Gold Aluminium Rocker Arms are precision CNC-machined to strict tolerances. Developed to meet the demands of professional engine builders, these rockers are proven to withstand extremely aggressive spring pressure and valve lift and feature clearance for a 1.650" O.D. valve springs.

Ford FE 390-428 Ultra-Gold Shaft Roller Rocker Kit 1.76 Ratio

The new Ultra-Gold ARC Series Shaft-Mount Aluminium Rocker System from COMP Cams provides a high-quality, fully adjustable valve train for Ford FE engines. Featuring high-lift capabilities in a lightweight design, the system is designed exclusively for use in high-performance street and race engines. Steel stands offer extra shaft support for strength and rigidity, while shims are adjustable left and right for intake runner clearance. The rockers feature a 1.76 ratio • Side-shim adjustable for runner clearance • Steel stands provide additional shaft support for strength and rigidity • Designed exclusively for use in high performance street & race engines

CO19046

Ultra Pro Magnum Rocker Arms

The new Ultra Pro Magnum Rocker Arms

take stud mount rocker performance, stability and value to a whole new level.

The investment cast 8650 chromemoly body & arched, web-like design delivers increased strength & rigidity while reducing moment

of inertia and the unique black oxide exterior finish helps prevent corrosion. Ultra Pro Magnum Rocker Arms feature increased retainer & valve spring clearances, oversized trunnions, precision-sorted needle bearings, hardened roller tips, rebuildable design & a lifetime guarantee on the rocker body.

Ultra Pro Magnum XD Rocker Arms

The next design evolution of the Hi-Tech™ Stainless Steel Roller Rocker Arms are built to outlast and outperform in accuracy and strength.

The Ultra Pro Magnum™ XD Rocker Arms are engineered from durable 8650 steel and include a machined billet push-rod seat insert for a wide range of super accurate ratios. A unique and wide ratio range to fit almost any popular application from 1.5 to 1.73 in .5 increments for Chevy and 1.6 to 1.73 for various Ford applications is available. These XD rockers are fully rebuildable and boast precision-sorted needle bearings and hardened roller tips. And, they work with most diameter springs and retainers. The new XD design utilizes advanced FEA and CAD design and development to improve strength, stiffness and MOI optimization for drag and circle track applications.

COMP Cams shaft mount aluminium rocker arms

Using COMP Cams Mount Rocker Systems is one of the most effective ways to increase horsepower. These systems transfer power from the camshaft to the valve by properly positioning the rocker over the valve. Rather than being mounted on a stud, a horizontal shaft works as the fulcrum, which significantly increases mounting stiffness and valve train stability. Constructed from high strength 2024 aluminium and using an 8620 hardened steel shaft, COMP shaft rockers are designed using the latest in computer technology and are field tested by experts in every type of racing.

Small Block Ford With Non Adjusting Rockers 5/16" Stud

On the 302-351W Fords, simply remove the standard adjusting nut, slip the spacer over the stuff, install the new nut and adjust the valves as necessary. Replace the screw-in studs with those provided, slip the spacer insert through the rocker arm ball, and adjust with the new adjusting nut. These kits are a simple and inexpensive alternative to give the flexibility of an adjustable valve train

SBF 5/16" Stud Non Adjusting Rockers Nuts **CO4610-16**

Rocker Trunnion Upgrade Kit

Kit includes: rocker arm trunnion, rocker arm bearing & rocker arm retaining ring
 • Converts a stock LS series rocker arm into a captured roller trunnion for race applications
 • Increases stability and stiffness
 • NASCAR spec LS engine proven
 Rocker Trunnion upgrade kit **CO13702-KIT**
 Replacement Bearing for CO13702-KIT **CO137022**

COMP Cams Rocker Arm Adjusting Nuts

All COMP Cams rocker arm adjusting nuts are designed for the ultimate in strength and locking force. They are precision-ground for minimum runout and are tapered for extra strength in the locking area. The special alloys in the polylocks ensure a quality and strength not found in any other competitive products.

ROCKER ARM

PEDESTAL SHIM KIT

These Aeroflow rocker arm pedestal shim kits will correct excessive hydraulic lifter preload on Ford engines with pedestal-mounted rocker arm assemblies. Excessive preload could be due to a cam change, head resurfacing or when reconditioning a cylinder head. These shims can be a quick and easy alternative to resorting to different length pushrods. The 32-piece kit includes 16 thin and 16 thick shims, which can be used to reduce lifter preload by .030" (thin shim), .060" (thick shim). To attain .090" reduced preload, you must stack the shims.

AF95-9010 Ford Rocker Arm Shim Kit (will not fit Ford FE)

ROCKER ARM

BRIDGE SHIM KIT

These Aeroflow rocker arm bridge shim kits will correct excessive hydraulic lifter preload on Australian V8 engines with bridge-mounted rocker arm assemblies. Excessive preload could be due to a cam change, head resurfacing or when reconditioning a cylinder head. These shims can be a quick and easy alternative to resorting to different length pushrods. The 32-piece kit includes 16 thin and 16 thick shims, which can be used to reduce lifter preload by .030" (thin shim), .060" (thick shim). To attain .090" reduced preload, you must stack the shims.

AF95-9012 Holden Rocker Arm Shim Kit

STUD GIRDLERS

Ultra-Gold Stud

Girdles Solid Bar Design

COMP Cams® offers the finest stud girdles on the market today. Our stud girdles are made of 6061-T6 aluminium for light weight and anodized for durability. They are a one-piece, solid bar design to tie the studs together as well as properly locate them.

AFR ROCKER STUD GIRDLERS

These AFR stud girdles are designed to eliminate the rocker stud flexing and associated horsepower loss that come with today's high-lift cams and high-pressure valve springs. They are manufactured from sturdy anodized aluminium to keep your valvetrain rigid for maximum engine performance. Available Chevy and Ford AFR heads, the AFR stud girdles will maintain valvetrain longevity throughout the engine's entire rpm range. Adjusting nuts sold separately.

Aluminium Stud Girdles

Stud Girdles reduce flex and part breakage. Increased valvetrain rigidity helps minimize energy loss. Each set comes with aluminum stabilizers and poly locks. Two pieces per set.

Fits Chev small block.

PR66950 For use with 3/8" stud

PR66951 For use with 7/16" stud

Fits Chev big block.

PR66981 For use with 7/16" stud

GUIDE PLATES

ISKY ADJUSTABLE GUIDE PLATES

Isky's adjustable guide plates are made simple to minimize modifications associated with high performance cylinder heads where intake ports have been relocated from their original factory position. These fully adjustable guide plates come with two pieces. One male and one female and are supplied as a full set of 8 pairs.

- Grind centers for a closer setting.
- Can easily be adjusted inward or outwards.
- For more stability, guide plates can be welded once final adjustments are made.

Guide Plates

Guide plates are a must for the high lift/spring pressure environments of today's performance engines.

Each one is designed using stereo lithography design techniques for the ultimate accurate fit.

COMP Cams Guide Plates are hardened and black oxide finished.

They come in many different configurations to fit your specific needs. Exact stud placement and rounded contact points are two additional outstanding features.

PUSHROD GUIDE PLATES

Crower's pushrod guide plates are specially hardened for added strength and durability. They are positioned on the rocker arm studs to guarantee proper pushrod alignment. Crower's unique guide plate design reduces the flex and rocker arm slop found in other brands, providing more pushrod stability and added strength. Adjustable guide plates are also available. Please specify when ordering.

PUSHRODS

HI-TECH CHECKING PUSHRODS

The COMP Cams Hi-Tech™ Pushrod Length Checking Tools are precision-crafted from steel alloy and black oxide to provide years of accurate measurements. The unique design is easy to read and eliminates the need for expensive calliper's. Each complete revolution is equal to .050". Having the correct length pushrods in your engine are a critical factor in proper rocker arm geometry, and this is the best tool to measure pushrod length.

COMP Cams Hi-Tech Pushrods

As cam profiles get more aggressive and valve spring pressures increase, it is even more critical to select the right pushrod for your application. COMP Cams Hi-Tech pushrods are designed using high-quality premium steel alloy for a lifetime of strength and durability. Hi-Tech pushrods from COMP Cams' advanced technology keep you competitive in a high-tech world.

COMP Cams Magnum Pushrods

COMP Cams Magnum pushrods are the perfect complement to your Hot Street, bracket, oval track, or any other high performance engine. These one-piece Magnum pushrods are made of C1020 high-carbon, .080 in. wall chrome moly steel and are heat-treated for use with guideplates. They're an affordable way to combat higher spring pressures and the other stresses associated with high performance engines.

FORD 332-429 Hemi V8 (set/16)	C66016-16
OLDSMOBILE V8	

CROWER COOLFACE SOLID LIFTERS

Better engine builders know that cam lobe and lifter wear is caused by inadequate oil lubrication at the cam and lifter surface. With today's high rpm, high rocker ratio and high spring pressures, cam and lifter failure is at an all time high. Crower's all new "CoolFace" lifter option is a must for these applications. Features a small diameter oil metering port (.024") that is precision machined in the face of the lifter. No significant oil pressure loss, but significantly improved cam and lifter longevity. Crower has a complete inventory of .842" and .874" diameter lifters to choose from, including piddle valve, edge orifice, small chamfer, no chamfer and lightweight designs. Call Rocket for pricing and availability. Crower also offers the "CoolFace" option on competitor's solid lifters as well. Send your competing brand lifters in to Crower for precision EDM machining. Call Rocket for more info.

Warning: Block restrictors are not recommended.

Description	Part No.
Chev. .842" (.97g) small chamfer	C66900X980-16
Chev. .842" (.75g) LightWeight, no chamfer	C6691X980-16

CROWER ROLLER LIFTERS

The best roller tappets on the market. Delivers 200% more life expectancy than competing brands. Features crowned bearings and crowned outer race that greatly reduces lobe tracking. No offsets.

Description	Part No.

HIPPO = Hi Pressure Pin Oiling
Warning: Never submerge roller lifters in parts washers due to possible contamination from suspended metal filings in the solvent. Crower recommends .0015" - .0025" tappet bore clearance. For High Pressure Pin Oiling (HIPPO), specify "H" after p/n.
Ex: 66292X874H-16

HI-SEAT OFFSET ROLLER LIFTERS

Crower's "Hi-Seat" roller lifters feature a .200" offset, integral rev-kit button and Crower's "Hi-Seat" pushrod design. Allows for shorter pushrods, eliminating unwanted flex and weight.

Description	Part No.
CHEVROLET 265-400 V8 .842" dia (set/16)	C66275-16

Note: Standard offsets include 4 left int, 4 right int, 8 straight exh.
For High Pressure Pin Oiling (HIPPO), specify "H" after p/n.
Ex: 66275H-16

HYDRAULIC ROLLER LIFTERS

Crower hydraulic roller lifters combine the performance level characteristics of a roller with the reliability of a hydraulic. Completely redesigned body and bearing. Can be retrofitted for earlier style blocks.

*Requires a different pushrod length than previous hydraulic rollers.

Description	Part No.

CROWER SEVERE-DUTY / OVERSIZED BEARING

ROLLER LIFTER

Crower offers a series of Severe-Duty roller lifters designed for full race use. Features an integral one-piece body, CNC machined from special alloy and heat treated for the best possible wear. Utilizes larger diameter bearings with thicker wall than standard designs to withstand today's high performance race applications. Lifters are available with Hi Pressure Pin Oiling (HIPPO) option. Oil restrictors are not recommended when running Crower roller lifters.

EXTREME ZONE™ EZ-ROLLX

ROLLER LIFTERS

The revolutionary new EZ-ROLLTM bearing option is exclusive for ISKY RED-ZONETM Roller Lifters! EZ-ROLLTM "needle-free" roller bearings solve the age old dilemma of needle bearing overload. Although needle roller bearings perform well in light to moderately heavy load applications, the often xtreme loading demands of "all out" drag, pro-street, continuous operation endurance and offshore marine applications have long required a better performing alternative. Solution: ISKY'S proprietary solid bearing raceway EZ-ROLLTM Bearing! Spintron and field test proven over the past 8 years, EZ-ROLLTM bearings carry far greater loads. Their advanced needle-free design and greater surface area to load distribution footprint deliver a solid 350% higher load rating! EZ-ROLL, because needles really are old news!

ISKY Endurance Plus Roller Lifters

Endurance Plus Roller Lifters feature Isky's revolutionary new TruTrac long life precision roller bearings. Sprintron test proven over 1,000 racing miles, TruTrac bearings are distinguished by the following Isky exclusives: New 30% stronger Super Clean Timken Steel specifically designed for needle roller bearings. New .755" dia. "Parabolic" Profile Crowned outer bearing race corrects for block misalignment by optimizing cam lobe contact. New Non-Skid Textured finish is test proven to improve bearing life by reducing slippage & lowering oil temperatures! New Stronger 4340 heavy duty pin.

Durathon Roller Lifters

The Durathon Series was developed utilizing the latest advances in precision CNC Machine Cell Technology, focusing on the most popular applications. Durathon Lifters feature a High Quality, tough alloy body and roller bearing assembly and come standard with "Captive" Guide Bars. All Lifters are precision ground "True-Round" .842" diameter. Durathon Roller Lifters are absolutely 100% made in the USA and are recommended for applications where up to 700 lbs. maximum valve open spring force is employed.

Lightweight Solid Lifters

They're back in production again! The original "Johnson Style" Solid Lifters; Made in The U.S.A! This lifter has always been the Engine Builders' preferred choice for Oval Track & Drag Race Solid Cam Applications. When compared to other brands, they are lighter in weight and have a more precisely ground cam face to promote optimum lifter rotation, in conjunction with today's aggressive cam profiles. Special oiling lifters feature an EDM hole which delivers extra lubrication to the cam lobes.

Red-Zone Maximum Endurance Roller Lifters

RED ZONE Roller Lifters feature the new Marathon Roller Bearing which utilizes a larger diameter pin and a shock absorbing thicker outer race for higher fracture toughness! The resulting increased cross sectional area helps prevent premature bearing failures even under the sustained RPM red line abuse of professional endurance racing. In drag racing, Marathon Bearings withstand higher (up to 1/2 ton) spring loads, delivering over twice the number of runs between rebuilds! Exclusive Full Spectrum 3 Point Oiling System features continuous dual action pressurized lubrication at all times to the roller bearings and an extra shot of oil over the nose of the cam where loads are greatest. Helps prevent premature needle-roller wear.

EXTREME ZONE EZ-ROLL MAX ROLLER LIFTERS

Upgraded Epsilon-ZMAXTM Solid Bearing Raceway Material; an "ultra" low friction, high-tech alternative to needles. Ideal for the most extreme loading environments:

- High boost turbo, high HP nitrous & blown gas/alcohol
 - Offshore marine & all-out, normally aspirated applications
- EZ-MAXTM is recommended for ANY .842, .904 or 937 dia lifter installed with over 400lbs. seat and 950-1,300 lbs. valve open spring force.

Jesel TS-Series

Keyway Roller Lifters

Since their release over a decade ago, Jesel has built their Precision Roller Lifters with features that other companies are just starting to call standard. Features such as the use of exotic materials for the rollers and axles, friction reducing coatings on the bodies and precision sorted bearings that are cooled and kept free from debris by pressure fed oiling have been incorporated into every Jesel lifter made since 1995. Jesel Keyway lifter bodies are fitted with a keyway pin that rides in an index slot milled in a bronze lifter bushing. This design provides precise cam/roller alignment and eliminates the added weight of tie bars or tall lifter bodies associated with Dog Bone-style lifters.

High Energy Hydraulic Lifters

High Energy Lifters have a lightweight check valve disc that allows for quicker response. This results in increases in engine speed before valve float. This check valve also maintains added control at all engine speeds and loads. Increases in engine speed can be attributed to this quicker response check valve.

Application
 Chev Small Block 265-400
 Chev Big Block 396-454

Pro Magnum Hydraulic Lifters

Pro Magnum Hydraulic Lifters are specifically designed to perform at higher engine speeds. When engines are equipped with a hydraulic lifter, high rpm is limited by the improper position of the internal piston as the lifter inevitably pumps up. This improper location results in open valves and therefore leads to lost power or sometimes even engine failure.

Application
 Chev Small Block 265-400
 Chev & Holden LS1 Retro-Fit
 Chev Big Block 396-454
 Ford Cleveland 302-351
 Ford Windsor 289-351W

 Holden 253-304-308

Mechanical Lifters

These lifters are manufactured using the tightest tolerances in the industry, ensuring optimum performance. The crown of the lifter is ground to a precise radius for proper break-in and to guarantee long life. The oil metering band is milled to the correct depth to prevent too much oil from being delivered to the top of the motor, robbing precious horsepower. Available with a .012" hole in the face of the lifter for improved cam lobe oiling.

Application
 Chev Small Block 265-400
 Chev Small Block 265-400 with .012" hole

Endure-X Solid Roller Lifters

Today's engines place a greater demand on lifters than ever before. With today's more aggressive cam lobe designs and increased RPM ranges, it takes a superior roller lifter to withstand the abuse. COMP Cams has set the industry standard with the Endure-X Solid Roller Lifters. Endure-X Lifters are fully heat-treated, machined to ultra-high tolerances, are fully rebuildable and are available for a wide variety of applications, including small base circle and offset applications.

1. Removable Link Bar – COMP Cams patented link bar assembly combines the benefits of a removable link bar with the safety of a captured link bar.
 2. EDM Oil Injection Technology – Guarantees that the bearing assembly receives a constant flow of pressurized oil via a precision hole aimed directly at the needle bearings.
 3. Precision Sorted Bearings – The needle bearings are precision sorted by size to distribute load evenly, preventing premature wear and failure.
 4. Tool Steel Axle – The axle is made of wear resistant Tool Steel to prolong the life of the roller assembly, particularly in high RPM applications.

Application
 Chev Small Block 265-400
 Chev Small Block 265-400 (small base circle)

Elite Race Solid Roller Lifters

These COMP Cams Elite Race solid roller lifters feature an exclusive body design that does not include an oil band, thus maximizing rigidity and reducing lifter bushing wear. The body is manufactured from CNC-machined SAE 8620 steel alloy, with SAE 9310 steel alloy wheels that have been micro-polished and micro-sized and needles that are made from 52100 bearing steel and micro-sorted with a controlled contour profile. While the construction and body design make them incredibly strong, they are also lightweight, with each lifter weighing less than 100 grams. Possibly the most critical element of these lifters is the fact that the oversized (.400 in.) axles are dual-pinned. The pins go through the lifter ears at each end and leave a small gap in-between for wear-reducing oiling that actually flows through the center and the top of the axle, directly to the needles. For maximum control and durability in high-rpm race applications, the COMP Cams Elite Race solid roller lifters also feature captured link bars and an exclusive modular pushrod design that allows the pushrod insert to be swapped out for centered, left, or right offsets. And with patent-pending oil control through the pushrod insert, engine builders can modify the lifters to meter extra oil to the top as desired.

Short Travel Hydraulic Roller Lifters

These COMP Cams short travel race hydraulic roller lifters have been engineered from a patent-pending design that specifically performs at higher engine speeds. They are designed to limit the lifter's internal piston as it is pumped up. By limiting that movement, the COMP Cams short travel race hydraulic roller lifters cut down on the loss of power and limit valvetrain failure at higher rpm. The lifters are REM-finished and then black oxide coated for extreme durability, even for those high-revving engines

DODGE GEN III HEMI ROLLER HYDRAULIC LIFTERS

Non-MDS Lifters are an upgrade over the commonly sourced Dodge "Hellcat" lifters. Featuring enhanced oil retention around the axle and bearing, which helps to reduce wear and increase durability in all applications. Drop-in. Ideal for any stock, high performance or racing applications. One lifter yoke holds four non-MDS HEMI lifters, four yokes needed per engine.

Description	Part No.

GENIII HEMI Lifters with 4 Yokes	CO856Y-16

Ford Hydraulic

Roller Retro-Fit Kit

Part no. CO31-1000 contains the pieces required to install our complete line of hydraulic roller cams in 302, 351W, 351C and 351M-400 Ford engines that did not come with an OEM hydraulic roller cam. This kit works on all small block engines originally equipped with either a flat tappet or a roller cam. When using this kit in a non-roller block, it is necessary to use a small base circle cam to ensure the lifters will not rise out of the lifter bores. This kit must be used with Part no. CO851-16 lifters. Comes complete with detailed instructions and all necessary hardware.

Description	Part No.
Ford Hydraulic Roller Retro-Fit Kit	CO31-1000

Hydraulic Roller Lifter Installation Kit

COMP Cams has put together these timesaving kits that contain all of the necessary pieces to help you smoothly install hydraulic roller lifters in your V6 or V8 block originally equipped with a hydraulic roller cam.

Each kit contains all required hardware and all components are new.

- Convenient solution for installation of hydraulic roller lifters in V6 or V8 blocks equipped with hydraulic roller cams
- Contain cam bolts, lifter guides, lifter retainer, cam retainer and cam retainer bolts (except where noted)
- Detailed instructions and all hardware required for installation are included

Application	Part No.
SB Chev 1987-93 Non-Vortec V8 305 & 350 With OE Hyd Roller Cam	CO08-1000

COMP Cams Roller Lifter Link Bars

These COMP Cams roller lifter link bars are designed to replace your worn or damaged link bars, when fitted to COMP Cams roller lifters. These link bars are precision-crafted from stainless steel and wear-coated for a long life in all applications.

CEVITE MECHANICAL LIFTERS

SB & BB Chrysler, Non Oiling **CL2131675**

LIFTER VALLEY BAFFLE

Prevents hot oil from splashing on intake manifold, thereby eliminating power loss. Keeps surplus oil out of valve covers by eliminating oil splash from lifter bores. Maintains oil pressure (during pushrod or rocker arm failure) by keeping lifters in their bores, except with roller cams.

Application	Part No.
Chev SB 289-400 Lifter Baffle	MI32610

REV KITS

"ULTRA REV KITS" ROLLER TAPPET

The "ULTRA REV-KIT" is engineered to increase engine RPM and prolong roller tappet bearing life by pre-loading the roller tappets to the cam lobe (eliminating stop-start "Skidding".) Pre-load springs are held in place by lightweight aluminium retaining bars which install beneath the cylinder head (a drop-in installation).

Xtreme Energy Mechanical Roller Camshafts

XR286R	Good in weekend warrior with 3000+ stall	3000-7000	286°/292°	248°/254°	.576°/582"	110°	CO12-772-8
XR292R	Pro Street. Needs good intake and exhaust,	3200-7200	292°/297°	254°/260°	.582°/588"	110°	CO12-773-8
GXR274R	Great for power touring. Needs 2500+ stall, easy on parts. Rough idle.	2200-6200	274°/280°	236°/242°	.564°/570"	110°	CO12-770-8
XR280R	Best in street machines with 2800+ stall, 10:1+ compression with 3.73-3.90 rear gears.	2500-6500	280°/286°	242°/248°	.570°/576"	110°	CO12-771-8

BLOWER Mechanical Roller Camshafts

300BR-14	Good for serious street/strip applications with 671 blower.	3000-6500	300°/308°	255°/262°	.575°/575"	114°	CO12-704-8
----------	---	-----------	-----------	-----------	------------	------	-------------------

Drag Race Mechanical Roller Camshafts

300BR-6	11:1 compression, 4500+ stall,	4200-7200	300°/308°	264°/270°	.630°/630"	106°	CO12-908-9
306LHR-7	Super Stock, 350 auto w/ 1.8 & 1.6	5500-8000	306°/312°	274°/284°	.748°/704"	107°	CO12-813-9

Oval Track Mechanical Roller Camshafts

292AR-6	1/4 to 3/8 mile tacky tracks with tight corners.	3500-6500	292°/296°	256°/258°	.630°/630"	106°	CO12-901-9
290AR-6	355 in Late Model on 1/4 to 3/8 mile tracks.	3000-7000	290°/300°	260°/264°	.645°/630"	106°	CO12-940-9
296DR-6	400-410 in Late Model on 3/8 to 5/8 mile tracks.	3500-7500	296°/308°	266°/272°	.645°/630"	106°	CO12-950-9

CHEV SMALL BLOCK 305-350 1987-98 (W/ O.E. HYD. ROLLER CAMS)

XTREME ENERGY Hydraulic Roller Camshafts (CARBURETED)

XR264HR	Mild performance applications, good mid-range, 3.23-3.73 gears. Slightly noticeable idle.	1200-5200	264°/270°	212°/248°	.487°/495"	110°	CO08-412-8
XR270HR	High performance application, largest with stock converter, noticeable idle.	1600-5400	270°/276°	218°/224°	.495°/502"	110°	CO08-422-8
XR294HR	Street/strip applications, 9.5:1+ compression, intake, headers, stall, gears. 3200+ stall.	2800-6100	294°/300°	242°/248°	.540°/562"	110°	CO08-443-8

THUMPR Hydraulic Roller Camshafts (CARBURETED)

291THR7	Mutha' Thumpr - High performance street/strip, needs 9:1 compression, 2500+ stall, intake, gears and headers, rough idle.	2200-5900	291°/311°	235°/249°	.522°/509"	107°	CO08-601-8
299THR7	Big Mutha' Thumpr - Street/strip, needs 9.5:1 compression, 2800+ stall, intake, gears and headers, very rough idle.	2500-6200	299°/319°	243°/257°	.533°/519"	107°	CO08-602-8

NITROUS HP Hydraulic Roller Camshafts (CARBURETED)

NX288HR	175+ HP nitrous system. 2500+ stall with lower gears and headers	2400-6500	288°/315	236°/248°	.520°/540"	113°	CO08-303-8
---------	--	-----------	----------	-----------	------------	------	-------------------

CHEV & HOLDEN LS1/LS2/LS6

XFI Hydraulic Roller Camshafts

XR275HR13	Great street/strip camshaft for mid-range & high RPM power. Must have programmer	1800-6800	275°/287°	222°/234°	.566°/576"	113°	CO146-426-11
XR281HR13	High RPM street/strip cam for use with FAST intake. Requires programmer	2200-7200	281°/293°	228°/240°	.571°/590"	113°	CO146-428-11

XFI RPM Hydraulic Roller Camshafts

XR259HR	Very strong torque, good mileage.	800-5800	259°/265°	206°/212°	.515°/522"	112°	CO54-408-11
XR265HR	Good torque and very strong mid-range power.	1200-6000	265°/271°	212°/218°	.522°/529"	114°	CO54-412-11
XR269HR	Great mid-range with superior top end power.	1300-6300	269°/273°	216°/220°	.525°/532"	114°	CO54-414-11
XR273HR	Street/strip camshaft for high rpm power.	1600-6600	273°/277°	220°/224°	.530°/534"	112°	CO54-416-11
XR277HR	Street/strip camshaft for use with FAST intake.	2000-6800	277°/281°	224°/228°	.534°/537"	112°	CO54-418-11

XFI RPM HI-LIFT Hydraulic Roller Camshafts

XR275HR	Great street/strip cam for mid and high rpm	1800-6800	275°/277°	222°/224°	.566°/568"	112°	CO54-426-11

CHEVROLET CAM LOCKING PLATE & BOLT KIT

Part No	Colour	Description
AF463-50	Black	Suits small block & big block Chevy Includes Grade 8 bolts.

CAMSHAFT RETAINING PLATE

Just replaced the camshaft in your LS engine, wanting to replace the camshaft retaining plate to stop the camshaft from wandering around? This Aeroflow Performance camshaft trust plate is designed to suit all GM LS engines and replaces the genuine GM12589016. These solid steel plates protect your engine investment by returning your timing back to the desired specifications. Proper positioning of your camshaft is crucial. They feature the O-ring seal that is molded onto the back of the plate with a new Viton O-ring included. These have counter sunk bolt holes and the one time use T40 Torx Bit tapered bolt is included and also sold separately (AF463-52). The required torque is 11ft/lbs. (14.91Nm).

- AF463-51 GM LS retaining plate kit
- AF463-52 GM LS camshaft retaining plate bolts (GM11561455)

Chevy Cam Lock Plate

The COMP Cams Cam Lock Plate will help you make sure that the cam bolts cannot back out at any rpm level or load. Bendable locking tabs and special high-strength bolts make this kit a must for any camshaft installation.

- Chev V8 Cam Locking Plate with Bolts **CO4605**

CAMSHAFT BOLT

GM L92 Camshaft bolt, M16 x 1.50" UHL
CO5458

CAM PHASER LIMITER KITS

Cam phasers are specially designed, computer-controlled cam gears that automatically optimize camshaft timing based on the current engine RPM. While this technology provides fuel efficiency and the ability to always be in the best position for maximum power, regardless of engine RPM, it does present some limitations when it comes to performance cams. With such a wide range of valve timing movement, there is very little piston to valve clearance, which limits you to a small cam profiles with little overlap.

- Description **Part No.**
- Ford 4.6L/5.4L Modular 3V Ford 2005+ **CO5449**

COMP Cams Degree Bushings Kits

Using these offset bushings from COMP Cams is the simplest way to change the degree of a camshaft in relation to the crankshaft. These bushings offer accurate positioning of the cam because of their precise manufacturing. They come in packs of five and require a 13/32 in. drill bit.

- COMP Cams Degree Bushings Kit **CO4760**

GM LS Camshaft Retainer

Camshaft retainer plate for all GM LS style engines.
LS Camshaft Retainer Plate CO5463-KIT

Thrust Buttons

The thrust button rides between the front of the timing gear and the back of the front cover and can be shimmed for proper end play of the cam. COMP Cams has both the solid nylon button and the roller thrust bearing available for the ultimate in performance.

Fuel Pump Pushrod

When a high pressure fuel pump is run with a steel roller cam core, the stock fuel pump pushrod is not compatible with the steel core. You can damage an expensive roller cam as a result of wear at the fuel pump lobe.

Description	Part No.
Chev V8, Bronze Tip for Steel Cams	CO4607
Chev V8, Steel Tip for Cast Iron Cams	CO4616
Chrysler Big Block & Hemi with Bronze Tip	CO4646

CAM THRUST BUTTON'S

Cam Buttons limit lateral movement of the camshaft in engines without cam thrust plates and reduce friction for "FREE" Horsepower! Machining of the cam sprocket may be required. Available in Nylon and Steel Roller.

- AF64-4351 Roller cam button suits Small block chevy
- AF64-4352 Roller cam button suits Big block chevy
- AF64-4354 Nylon cam button suits Small block chevy
- AF64-4355 Nylon cam button suits Big block chevy

FUEL PUMP PUSHROD KIT

ARP has developed these sophisticated and durable pushrods. They're made from premium grade aerospace chrome moly and centerless ground to precise diameter. A hollow core serves to reduce the reciprocating mass, which requires less energy to operate. NOTE: Not for use on roller cams!

Application	Diameter	OAL	Part No.
Chevy Small Block	1/2	5.750"	AR134-8701
Chevy Big Block	1/2	5.750"	AR135-8701

Accessory Cam Drive

- Drive: forged ARP2000, 220,000 psi alloy chrome moly steel with corrosion-resistant oxide finish.
- Concentricity: .001 T.I.R., between shaft and hex, 1" and 1.5" length
- Threads: form rolled 9/16" x .625" on cam end, 3/8" hex on drive
- Seal Plate: CNC machined 7075-T4 aluminium with Viton seal

Application	1.0"	1.5"
All 9/16-18 x .625	AR934-0005	AR934-0006

ARP Camshaft Seal Plates

The perfect compliment to the BULLETPROOF cam drives are these precision seal plates. They are made of CNC-machined 7075-T4 alloy aluminium with Viton seal and anodized to resist corrosion. Available in 2.100 and 2.380 diameters to fit most OEM or aftermarket blocks.

- AR934-0008 Camshaft Seal Plate Suit Dart, Aluminium Block 2.380" O.d
- AR934-0007 Camshaft Seal Plate Suit S/b Chev 2.100" O.d Block

Cam Bushings

A popular, easy way to advance or retard the cam is with Mr. Gasket's bushing kit. The bushings can be used to advance the cam for increased low-end torque and mid-range horsepower. They can also reduce excessive low-end torque and increase top-end horsepower by retarding the cam. The kit includes four offset bushings and a 0° bushing, so stock timing can be used again, if desired. Cam sprocket dowel pin hole must be drilled .406", (13/32") diameter.

MG85	2°, 4°, 6°, 8° plus a 0°
MG85B	1°, 3°, 5°, 7° plus a 0°
MG85C	Ford 289-302 cu. in., includes case-hardened dowel pin 2°, 4°, 6°, 8° plus a 0°

CAM GEARS

GM LS 3-BOLT CAM GEAR AND LOCK PLATE KIT

The Cam Gear Upgrade w/ Lock Plate Kit for GM LS 3-Bolt Camshafts easily allows the installation of the stronger three bolt camshaft into an LS engine originally equipped with a single bolt camshaft.

- Precision 3 bolt 58x LS Cam Gear
- Cam Lock Plate and Premium Grade Bolts
- CO2102CG

4G63 ADJUSTABLE

CAM GEARS

BC adjustable cam gears deliver the easiest way to dial in more horsepower and/or torque without getting underneath the valve cover, disassembling the engine or dealing with onboard electronics. BC gears are CNC machined from aerospace grade, 6061-T6 billet aluminum for ultimate tensile strength. Easy to read, laser etched face features micrometer style markings for precise adjustment (up to 10 degrees in each direction) and quick tunability. Each hub is held down by six ARP made, Grade-8 hex bolts for maximum clamping ability. Hard anodized finish prevents premature surface wear.

FLATHEAD TIMING COVERS

If you want to run early heads on a late model flathead, you don't have a way to clamp the distributor down. Until now. This cast aluminium timing cover has a distributor clamp built in. Can also be used as a replacement on 1949-1953 engines or on 1948 and earlier engines running a 1949-1953 camshaft. Distributor gear oiler built in.

RP91015632 Flathead Timing Cover

Two-Piece Billet Aluminium Timing Covers

Even with a thrust button, a stock stamped front cover will flex enough to cause erratic ignition timing. The COMP Cams Two-Piece Billet Aluminium Timing Covers eliminate all of these problems while also allowing the camshaft to be replaced without disturbing the oil pan seal. End play adjustment is made easy with a dial indicator access hole, and a new integrated timing pointer design simplifies ignition timing checks. These rigidly designed billet covers are compatible with all water pumps and most gear drives. Includes bolts, washers, roller button gaskets, etc.

Replacement Hardware for C0212 C0214

Three-Piece Billet Aluminium Timing Covers

The COMP Cams® Three-Piece Billet Aluminium Timing Covers for Small and Big Block Chevrolet engines allow access to

• Crankshaft timing adjustments without having to remove the harmonic damper of disturb the oil pan seal. Designed to be lightweight yet rigid, these billet covers offer convenience and performance in one easy-to-install package.

Small Chevrolet C0310
Big Block Chevrolet C0312

Comp Cams LS Engine Front Covers

The Comp Cams LS Front Covers for street/strip applications fits all 1st, 2, 3, 6 & 7 engines, OEM and aftermarket, including RHS LS race blocks. The LS covers feature provisions for timing pointer, OEM camshaft sensor and any regular BB-Chevy crank trigger. Available for either standard snout or long snout crankshafts, these covers easily fit double roller timing chains and high pressure/volume oil pumps. Both covers come with gaskets

and crank seal: no modifications needed.
LS Front Cover C05496
LS Front Cover (LS7) C05497

CHEV REINFORCED CHROME TIMING COVER

This stamped steel chrome timing cover for small-block Chev has a reinforcement plate welded to the inside of the cover for additional strength. It prevents camshaft walk when used with a thrust button, making it ideal for use with roller cams. Includes front crankshaft seal.

Chev Small Block Reinforced Cover **ED4860**

CHEV ALUMINIUM TIMING COVERS

Our die-cast polished timing covers for Chevrolet come with pan seal, allen head bolts, gaskets, washers, and timing marker. ED4240 won't fit short water pumps or 1987 & later; ED4241 won't fit 1991 and later big-block Mark V engines.

Application
Small-Block Chevrolet Pre-1987 **ED4240**
Big-Block Chevrolet Pre-1991 **ED4241**

2-PIECE STAMPED ALUMINIUM COVER

This die-stamped two-piece front cover for small-block Chevys is made from .090" aluminium for light weight and excellent strength. This attractive and unique design allows quick camshaft removal without dropping oil pan or breaking oil pan seal. Will not fit 1987 and later engines. Note: If cam button is desired, a nylon cam button must be used.

Description
Small-Block Chev 2-Piece Cover Replacement Gasket Kit **Part No. ED4242 ED4243**

LS1 & LS2 2-PIECE TIMING COVERS

These two-piece aluminium front covers allow quick camshaft removal and installation without the need to remove the damper pulley or steering components. The cam can be installed and removed through a window in the front of the cover which is sealed with a plate and o-ring for superior leak prevention.

Application
LS1 with Rear Mounted Cam Sensor **ED4254**
LS2 with Front Mounted Cam Sensor **ED4255**

FORD ALUMINIUM TIMING COVERS

These die-cast aluminium timing covers for Ford are stock replacement parts for late model EFI 5.0L and 351W engines. Includes gaskets and crankshaft seal. Both are compatible with stock or Edelbrock Victor Series aluminium water pumps.

Application
1969-87 351 Windsor **ED4250**
1986-93 5.0L Reverse Rotation W/P **ED4251**

Milodon Timing Covers

Milodon aluminium timing covers are CNC machined for precise fit and maximum durability. They provide a positive, non flexing cam stop and fit with stock or double roller timing chains (not for belt or gear drive systems). These covers fit under the stock short water pump in most cases (some applications will require minor water pump modification).

TIMING CHAINS AND SETS

MELLINGS TIMING CHAIN SET

Melling timing chain kits provide an efficient and economical way to provide the timing components needed for a quality engine rebuild. Timing chain options include both standard and roller chains to provide matches with the high quality sprockets and if necessary tensioners and guides that fit the application. Both OEM and performance timing chain kits are available. Melling chains and sprockets are manufactured using the highest designs, quality materials and workmanship. Melling chain kits offer you the coverage and choices of standard, HD and performance to fulfill your timing needs at every service level.

JESEL VALVETRAIN INNOVATION

JESEL Belt Drives
 JESEL Belt Drives Have Won More NASCAR, NHRA & IHRA Races Than All Other Competitors Combined
 It's safe to say that JESEL is the originator of the modern racing belt drive system. Like most JESEL valvetrain components its belt drive was born out of necessity as NASCAR racers were experiencing frequent timing chain failures in 500-mile races. It has been refined over the years to a precise timing system that is durable enough to endure tough 24-hour races such as Daytona and Le Mans or a full-season of circle track competition. Racers have been rewarded with years of service from their JESEL belt drives by simply replacing the belt at recommended service intervals.
 Besides being more durable than gear or chain drives, JESEL's belt drive systems offer a number of advantages. They are:
 • Extremely accurate cam timing
 • Adjust cam timing ±10 degrees in seconds (without removing the water pump)
 • Swap cams easily through front cover without cover removal
 • Reduces crankshaft harmonics
 Stronger than chains or gear drives Built to Last – Built to Win!
 Every JESEL belt drive system is built using the finest materials and coatings available, and is machined to precise tolerances in JESEL's state-of-the-art CNC machining centers. Check out these unmatched key features.

Solid One Piece Upper Pulley Belt Drives

For engine builders and racers currently running chain or gear drives, Jesel now has a cost effective alternative Camshaft Belt Drive. This drive features a solid, one piece upper pulley design that offers cam timing adjustability of $\pm 8^\circ$. Proven standard features such as a 25mm reinforced High Torq Drive belt, bronze thrust washers and high vacuum Teflon coated cam and crank seals will reward the racer with years of dependable service. Camshaft belt drives reduce oil windage, they are significantly stronger than timing chains and are gentler than gear drives on the valvetrain.

* Fitment to the World Products Motown Block requires extensive machining to the block, oil galley plugs and cover.

Hi-Tech Belt Drive Systems

Comp Cams Hi-Tech Belt Drive Systems are ideal for serious street performance and race applications. Designed to absorb crankshaft harmonics guarding against performance robbing valve train instability, they feature: extreme application belt for high rpm & high compression durability, infinitely adjustable Vernier accuracy, unique belt idler system to reduce flap throughout rpm range and a unique camshaft thrust adjustment system without shims. They include double lip seals for long life & maximum crankcase vacuum. Different diameter idlers are available for racers with align bored blocks

GEAR DRIVES

Milodon Gear Drives

The Milodon gear drives are a professional style three-gear unit which, unlike a four-gear type, does not rob any power from the engine to run. The billet steel gears mounted solidly to the block, will not and can not, allow the timing to vary, unlike a flexible belt or chain. The design allows precise camshaft advance & retard using Milodon's adjustable bolt pattern cam gear and cam hub assembly. These benefits add up to increased horsepower output and higher RPM potential.

FULL COVER STYLE

Milodon full cover style gear drives include an aluminium timing cover with a billet removable cam cover for effortless adjustment of cam timing. They are Available in the standard "flat cover" configuration which uses a stock style water pump or the "blown/injected with fuel pump drive" style that does not use a stock-style water pump. Blown engines will require a fuel pump extension.

Description	Part No.
Chev Small Block Flat Cover Style	MI12000
Chev Small Block Blown Injected Style	MI12250
Chev Big Block Flat Cover Style	MI12600
Chev Big Block Blown Injected Style	MI12700
Replacement Crank Seal	MI12965

UNDER COVER STYLE

The Milodon Under Cover gear drives fit under the stock front cover with very slight fitting and mounts the fixed idler gear solidly to a 3/8" thick steel plate which is bolted securely to the block. This fixed idler system will fully compensate for any crank position, even if the block has been severely align bored, without any sacrifices.

GM LS Gear Drive Timing Set

These gear drive timing sets are specifically designed for LS engines used in racing, street, marine and extreme applications. They provide the most accurate valve timing possible by eliminating chain flutter and backlash. They bolt on without modification, maintaining the stock oil pump and timing cover for all LS-based engines except dry sump models. Dry sump engines (LS7, LS9, etc.) require an external oil pump. These are the world's only gear drives for LS engines and are based on the award-winning COMP Cams® LS Sprint Car Gear Drive. LS Gear Drive Timing Sets are designed for three-bolt cams and work with all 24x and 58x LS engines. GM LS Gear Drive Timing Set (Standard GM Blocks) **CO5495**

JP Performance Idler Gear Drives

A-Grade Drawn Cup Needle Bearings rated to 12000RPM and dynamic load rating of 8.6kN (1935Lbf). Thrust washers rated to 16000RPM and dynamic load capacity of 7.2kN (1620Lbf). Induction Hardened Gears for longer life under harsh conditions. CNC turned for greatest accuracy. Precision laser cut idler plates. Shot peened gears to relieve stress. Case hardened and ground idler shafts to improve bearing life. Cam Bushes in 0, 2, 4 and 6 degrees for greater timing accuracy. Chev Kits include Cam Lock Tab and Thrust Bearing Assembly. Detailed instructions for rapid and correct installation.

Edelbrock Accu-Drive® Camshaft Gear Drives by Cloyes

The Accu-Drive® camshaft gear drive kit replaces a stock timing chain with a precision gear drive system. The gear drive can be easily installed. Most Accu-Drives require no modifications to the engine block, although some fitting of the axles and front cover may be required. A unique feature of the Edelbrock Accu-Drive® system is the ability of the main idler gear to float to an optimum position between the crankshaft and camshaft gears, assuring absolutely equal load sharing between the crankshaft and the camshaft gears. The gears are made from billet SAE-1144 steel with induction hardened teeth. Gear teeth are shaved for precision operation. The set features hardened and ground idler pins from billet steel.

- Accurate Timing Control... No Chain to Stretch
- Smooth Cam Rotation for Precise Valve Timing
- Provides Multiple Cam Timing Adjustments for Optimum Performance
- Compatible with all Standard Camshafts

Important Note: Accu-Drive® Gear Drives are not recommended for use above 7,000 rpm or on computer-controlled vehicles with knock sensors.

ATI service kits

5.5" BAL 3 RING SERVICE DUROMER KIT AT1918985-70

CRANKSHAFT HUBS

Steel crankshaft hubs only. Normally used for supercharged applications where a damper is not required.

Application	Part No
LS1 Balancer Replacement Steel Hub	AT1916031
LS1-LS6 Dual Keyway Replacement Hub	AT1916032H
Chev Small Block	AT1916040
Chev Small Block with BB Snout & 6-Bolt Pattern	AT1916134
Chev Small Block with BB Seal & 6-Bolt Pattern	AT1916172
Toyota 2JZGTE 1994-98	AT1916023

CRANK PIN DRILL FIXTURE KIT

The ATI Crank Pin Drill Fixture Kit for the LS1 Super Damper allows you to install 1 or 2 dowel pins to the LS1 crank, eliminating the damper twist on the shaft. In most applications, the crank may be drilled and the pin installed with the engine in the car. This is a must for engines used in circle track racing or supercharging.

LS1 Crank Pin Drill Fixture Kit AT1918993

ATI BALANCER PULLEYS

PROFORM HARMONIC BALANCERS

Fits Chevy small and big block engines. These are brand-new OE replacement harmonic balancers. Affordable pricing eliminates the need to clean your old stock balancer.

PR66509	Chev S/B 350 - Center Timing Mark 6-3/4.
PR66510	Chev S/B - Internal 6-3/4.
PR66511	Chev S/B - Internal 8.
PR66513	Chev S/B 400 - External.
PR66512	Chev B/B 454 Pre-1989 - External.

Nuline Stock Replacement Balancers

These balancers are perfect for stock replacement and mild street applications. For Performance or extended RPM application a Powerbond Street or Race series balancer should be used instead for extra insurance. Popular applications are listed below but a full range is available so if you don't see your model, please contact Rocket.

Powerbond Power Pulley Kit

Under drive balancer kit produces more horsepower by reducing parasitic power loss from driving engine accessories including alternator, power steering, and air conditioning

Application	Part No.
Holden Commodore	PBK001
VT-VZ 1999-06 LS1	PBK001

Street Series

The Powerbond Street Series is the economical choice for high powered street engines and race classes that require an OEM style balancer. The unique high pressure long cure bonded dampening rubber eliminates spinning and component separation giving reliable performance in engines used to 6500rpm. Powerbond Street Series combine new high strength SG (Nodular) Iron balancer centres with new inertia rings, bonded then balanced to extremely tight tolerances. All Powerbond Street balancers feature easy to read permanently etched timing marks on the outer ring.

Race Series

The Powerbond Race Series brings the advantages of bonded balancers to high revving race and street/race applications where an SFI approved balancer is required. Every Race Series Powerbond balancer features a precision CNC machined AUSI 1045 forged steel hub bonded to an equally strong forged steel inertia ring. Every model has easy to read computer etched timing marks. The new two stage clear over black finish is extremely resistant to scratching and corrosion. All Powerbond Race Series balancers meet SFI specification 18.1.

CHRYSLER

</

SCAT PERFORMANCE HARMONIC BALANCERS

Scat Performance SFI harmonic dampers are constructed of 1045 steel for increased durability and consistency at higher RPMs. All of our dampers feature a bonding process which adheres the elastomer to the I.D. of the inertia ring and the O.D. of the hub. Our dampers all feature laser etched timing marks against a painted black background. In addition, we engrave a mark every 90° which is also laser etched. (90° marks not on small block Ford dampers. Harmonic dampers for EFI applications do not have timing marks)

GM LS TIMING POINTERS

Aeroflow timing pointers make quick and easy work of adding a timing pointer to your LS1 series engine. Timing pointers play a crucial role to verify timing prior to tuning giving valuable info for a tuner or when starting your engine up on a new build. These direct fit billet CNC-machined LS timing pointers are adjustable with brackets to suit both a 6.75" and 7.5" diameter harmonic balancers. These LS timing pointers are positioned in such a way to clear engine accessories and allow optimal viewing spot for setting timing in or out of the car. The timing point features a slotted adjustment to precisely dial in your timing.

AF64-2161BLK	Black	LS2 belt line
AF64-2161S	Silver	LS2 belt line

FORD TIMING POINTER

This timing pointer from Aeroflow is precision manufactured from stamp steel and bolts on using your existing timing cover bolt. Designed to suit Small Block Ford 289, 302, 351 Windsor engines with a right-hand side outlet on the water pump. These are found in Ford XR, XY models and works with all 3 bolt harmonic balancer diameters.

GM LS BOTTOM END GASKET SET

Let AeroFlow Performance supply the very best in engine gaskets for your GM LS series build. This high calibre bottom end gasket set is intended to service the bottom half of the engine block, essentially everything under the cylinder heads. Keep your engine leak-free and running at peak efficiency by replacing worn or blown-out gaskets.

Conversion gasket sets or bottom end sets include :

1 X Front crankshaft seal	1 X Rear main seal
1 X Camshaft retaining plate gasket	1 X Front timing cover gasket
1 X Rear main plate gasket	1 X Oil pan gasket
1 X Oil pan drain plug washer	2 X Oil pump inlet O-ring
2 X Oil cooler block-off gasket	4 X Water pump gaskets

AF1850-1020 Bottom end gasket kit as above

FEL-PRO REPLACEMENT GASKETS

Fel-Pro replacement gaskets bring Fel-Pro's world famous quality and reliability to standard passenger car applications. These gaskets are suitable for stock and mild performance engines but are not recommended for high horsepower and high compression race engines which require the extra durability and features found in Fel-Pro's performance gasket range.

FULL GASKET SETS

These full engine gasket kits include all gaskets and seals required for a complete engine rebuild including head gaskets, intake and exhaust manifold gaskets, oil pan gaskets and all engine seals and ancillary gaskets.

TOP END GASKET SETS

Top end gasket kits (also known as valve regrind sets) include everything required to replace the cylinder heads. Including head gaskets, manifold and valve cover gaskets and valve stem seals, these kits can be converted to a full gasket kit by purchasing a conversion set (listed below).

FEL-PRO PERFORMANCE & RACE GASKETS

The design of Fel-Pro performance and race gaskets is the result of years of experience in performance gasket applications, backed by extensive testing in the laboratory and on the track. Fel-Pro head gaskets have long set the standard of performance in oval track competition, drag racing, road racing, off road racing and most other types of automotive competition. Fel-Pro brings these standards of top quality, durability and reliability to a full line of engine sealing applications.

STEEL O-RING HEAD GASKETS

Fel-Pro wire ring head gaskets, with a stainless steel combustion armour, proprietary-coated composite facing material and a solid steel core deliver and unbeatable combination of quality, capability and value making them the single best choice for the vast majority of racing and street performance engines.

LOC-WIRE HEAD GASKETS

Designed specifically for nitrous and high boost applications, Loc-Wire head gaskets use an oversized combustion sealing wire encased in a stainless steel armour to provide an extremely robust combustion seal. In order to use these special gaskets a receiving groove must be machined into the cylinder head.

APPLICATION	BORE X THICKNESS	PART NO.

Hussey Performance specializes in manufacturing quality copper gaskets to your exacting specs. Equipped and capable of creating or customizing any copper gasket. Hussey has the capability, the experience and the know-how to solve even your most complex gasket problems. Hussey Performance offer a wide line of head gaskets and exhaust gaskets in thicknesses from .035" up to .125" in .001" increments. Hussey have experience making all types of gaskets from domestic and import street cars to Top Fuel dragsters. More sizes and applications available by special order please give us a call to discuss your requirements.

COMETIC MLS HEAD GASKETS

MLS stands for Multi-Layer Steel. MLS head gaskets are comprised of three layers of stainless steel. The outer layers are an embossed viton coated stainless steel providing a superior seal with excellent bonded characteristics and are corrosive resistant. MLS head gaskets reduce bore distortion and withstand extreme cylinder pressures.

COMETIC AFM INTAKE GASKETS

Cometic AFM gaskets are made from a nitrile synthetic rubber that is bonded to an aluminum core. AFM material has a temperature resistance of over 250° F (121° C) and an 85% recovery while maintaining a strong torque retention. Gaskets made from AFM install dry and do not require a re-torque.

Application	BORE X THOCKNESS	Part No.

COMETIC VITON REAR MAIN SEAL

Holden Buick V6	CMC5707
Ford 351C & 351W 2-Piece	CMC5689

COMETIC MLS EXHAUST GASKETS

MLS exhaust gaskets are comprised of three layers of stainless steel. The outer layers are an embossed Viton coated stainless steel providing a superior seal with excellent rebound characteristics and are corrosive resistant. MLS exhaust gaskets are perfect for extreme turbo applications and will not push out or burn through.

VULCAN CUT RING HEAD GASKETS

A hybrid design forged to harness the best sealing properties of two head gasket types

Composite: Pliable, perforated metal-core composite gasket body eliminates coolant and oil leaks. No sealant needed! Stainless Steel: Solid stainless cut-ring 'bites' into the cylinder head forming a positive barrier against combustion pressure leaks. No machining required!

Designed for use with high static compression or forced-induction engines which are prone to combustion pressure leaks when using typical composite or MLS head gaskets. Especially 4-bolt-per-cylinder patterns such as BMW, Subaru, Toyota and Chevrolet LS series.

Engine Sealing Capability Exceeds:

- 16:1 Static Compression Ratio
- 35 lbs. Supercharged or Turbocharged forced induction
- 250 Shot of Nitrous Oxide

PRO COPPER HEAD GASKETS

SCE Pro Copper are the gaskets used to seal 8000 horsepower Top Fuel engines, Top Alcohol and Pro Mod nitrous or alcohol powered engines. These gaskets are produced from a 99% pure copper sheet to ensure a malleable head gasket which conforms to the mating surface. These gaskets require O-rings and sealant.

NOTE: 61 series gaskets have 5/8" bolt holes, 63 series have 9/16"

TITAN HEAD GASKETS

Recommended for any naturally aspirated engine up to the most extreme turbocharged, blown or nitrous injected liquid cooled engines with o-rings in the heads or block for combustion sealing. These gaskets require no additional sealant, patented coolant seals allow Titan copper head gaskets to be used even on street driven cars with no worries about coolant leaks.

MANIFOLDS

ATOMIC AIRFORCE MANIFOLD

When you're serious about power for your LS engine, call in the AirForce! The all-new MSD Atomic AirForce intake manifold delivers improved airflow and distribution to improve the performance of stock and modified engines. The unique bell-mouthed runner entrances maximize airflow and minimize shrouding - all while optimizing the available plenum volume for an unobstructed flow path over opposing runners. The polymer molded 2-piece design allows for easy access to the runners for porting. Atomic AirForce accepts an OEM or 103mm throttle body as well as stock or aftermarket fuel rails* including MSD's Atomic LS EFI system. The intake bolts on and is supplied with new gaskets and hardware for a direct bolt-on package.

Description	Part No.
LTI Atomic Air Force Manifold (2004-15)	MSD2700
LS7 7.0L Atomic Air Force Manifold	MSD2701
LS2 6.0L Atomic Air Force Manifold	MSD2702

THROTTLE BODY ADAPTER

Converts atomic air force manifold 4-bolt throttle body to 3-bolt throttle body
MSD2709

FAST LSXR 102mm Black Intake Manifold

Suitable for VT VX VY VZ Holden Commodore & HSV LS1 5.7lt & LS2 6lt V8 models
Constructed from an advanced polymer material that offers a host of benefits over aluminum aftermarket intakes, including lighter weight, increased strength and improved heat dissipating characteristics. Removable runners for easy porting. Perfect bolt-on fitment allows for the use of OEM accessories. 102mm air inlet that is perfectly suited to the FAST™ Big Mouth 102mm Throttle Body™, but the manifolds can also be used with any OEM or aftermarket 4-bolt 90mm or 92mm throttle bodies. Recommended for use with the matching FAST Big Mouth 102mm throttle body - please see our store for the matching FAST throttle body, 102mm air inlet diameter for huge flow. Better airflow than OEM or aftermarket 90mm units due to superior internal design. Innovative multi-layer design with removable runners for quick and easy disassembly and porting, integrated nitrous bungs and a precise bolt-on fit that permits the use of factory accessories and OEM fuel/emission connections without adjustments or clearance issues

Fitment notes:

Fits LS Cathedral port cylinder head equipped applications (LS1/LS2/LS6). Recommended throttle body; Big Mouth 102mm Throttle Body™ Part # 54102 or Big Mouth 92mm Throttle Body™ Part # 54092 for drive-by-cable applications.

Please see our store for matching throttle body.

FAST146302B

FAST LSX 92mm Intake For LS1, LS2, LS6 in Black

The patented LSX™ 92mm Black Intake Manifold from FAST™ is the only three-piece Gen III (cathedral port) composite manifold proven to deliver increased performance without compromising bottom-end drivability or high RPM power. For both street and racing applications, the new black intake manifold is an easy bolt-on installation for GM Gen III (LS1, -2 & -6) engines and is designed to work with the FAST™ Big Mouth 92mm Throttle Body™. The new FAST™ LSX™ 92mm Black Intake Manifold maintains the performance gains achieved over stock intake manifolds with no loss in drivability or low RPM torque. It can be ported by the customer for even more flow. As requested by previous LSX™ customers, the intake features the added benefits of corrosion-free stainless steel assembly bolts, an improved throttle body sealing flange and o-ring gasket and threaded insert throttle body mounts that provide increased durability.

Features & Benefits:

"Black" Gen III intake manifold with 92mm throttle body intake opening & added refinements
Incorporates high-quality polymer materials, which resist "heat sink" effect of aluminum
Maximizes potential of other popular engine performance upgrades such as cylinder heads

Part No: **FAST54039B**

LS1-LS2-LS6 Intake Port O-Rings

Rubber O-Ring style intake port gaskets for Chev & Holden LS1, LS2 and LS6 engines. Sold in sets of 8.

LSXR 102mm

LS3, L99 & L76

BLACK INTAKE MANIFOLD

Constructed from the same advanced polymer material as the original FAST LSX 92mm Intake Manifold, the LSXR offers a host of benefits over aluminum aftermarket intakes, including lighter weight, increased strength and improved heat dissipating characteristics. While the LSXR features a 102mm air inlet that is perfectly suited to the FAST Big Mouth 102mm Throttle Body. Other features include integrated nitrous bungs and perfect bolt-on fitment that allows the use of factory accessories without modification or clearance concerns.

LSXR 102mm STANDARD Intake Manifold - Rectangle Port **FAST146102B**

LSXR 102mm RACE Intake Manifold - Rectangle Port **FAST146104B**

LSXRT™ 102MM MANIFOLD
 Designed specifically for GM 4.8/5.3/6.0L cathedral port truck engines and cathedral port LS1, -2, -6 race applications where hood clearance is not a concern, the FAST™ LSXRT™ 102mm Intake Manifold follows the path chartered by the original FAST™ LSX™ Gen III Intake by featuring a modular design that allows for easy porting and disassembly and a runner design that yields an incredible 25 peak horsepower gain over the stock intake, on a stock 6.0L engine with a Big Mouth 102mm Throttle Body™. And similar to the LSXR™ 102mm Intake Manifold for cars, the LSXRT™ features the ability to remove individual runners for modification.
FAST146602

LSXHR 103MM INTAKE MANIFOLD
 The LSXHR 103mm Intake Manifold for LS3 Rectangular Port Applications is the industry's first polymer tunnel ram-style intake manifold and is ideal for generating maximum power in boosted and naturally aspirated engines.
 • Standard "tall" stacks are interchangeable with separately purchased "medium" and "short" stacks to find the most powerful combination
 • Polymer construction is lightweight and high strength to eliminate power-robbing heat soak commonly found in aluminum intake manifolds
 • Average 30 HP gain between 5,000 and 7,500 RPM over competitors' high ram intake manifolds
 • Rated for up to 45psi of continuous pressure
 • Compound fuel injector angle aims spray pattern for ideal atomization, resulting in maximum power production and superior drivability
 • Reversible top allows for forward- or firewall-facing throttle body installations
 • Two nitrous nozzle bosses per runner for clean and easy direct port system installations
 • 103mm Throttle body opening can be ported to 105mm

FAST146106

LSXR/LSXRT INTERCHANGEABLE INTAKE RUNNERS
 High Horsepower and Race versions of the LSXR Intake Runners are designed specifically for LS3, L99, L76 and L92 engines that are built for high performance applications. The High HP Runner Set is based on Daytona prototype intakes that are shorter and straighter than previous market offerings, specifically to improve high-RPM horsepower and torque in vehicles with added performance modifications. The High HP version has been proven to make 20+ additional horsepower over the original LSXR manifold with a 500-1000 RPM shift up in peak horsepower on LS3 performance engines. The Race Runner Set features the shortest and straightest runners that rival aluminum four-barrel intakes for horsepower potential. This setup utilizes a race runner engineered for all-out high-RPM performance and is ideal for vehicles with serious performance modifications and race converters. The Race Version can provide up to a 35+ horsepower gain over the original LSXR with a 500-1000 RPM upward shift in peak hp for all out-race vehicles.

LS1-LS2-LS6 DUAL PLANE MID-RISE EFI LS INTAKE MANIFOLD
 • The Holley GM LS1/LS2/LS6 2x4V dual-plane was designed in the tradition of the great dual Holley 4160 induction systems that competed on drag strips, in Trans-Am and at Lemans in the 1960's. The technology of the LS pushrod engine is now mated with the impressive multi-carb looks and performance of the muscle-car era!
 • The dual-plane equal-distribution layout produces great mid-range torque without compromising top end power. The LS engine architecture does not utilize an intake mounted water neck or distributor so it's perfect for two Holley carburetors and this intake manifold design takes full advantage of that opportunity.
 • Carbureted and EFI versions available
 • Power band from 1500-7000 rpm
 • Appropriate for any street/performance, muscle car, or street rod enthusiast
 • Cast aluminum construction
 • Intended for use on all GM LS Gen III engines equipped with LS1/LS2 style cathedral port cylinder heads
 • Carb Flange Center-To-Center: 8-5/8"
Description
 LS1-LS2 Cathedral Port EFI Manifold
Part No.
H0300-121

LS3/L92 EFI MANIFOLD MID-RISE DUAL PLANE
 The Holley GM 2x4 dual plane manifold is designed in the tradition of the great dual Holley 4160 induction systems that competed on drag strips, in Trans-Am at Lemans in the 1960's. The technology of the LS pushrod engine is now mated with the impressive multi-carb looks and performance of the muscle car era!
 • Power band from 1500-7000rpm
 • Perfect for any street/performance, muscle car or street rod enthusiast
 • Cast aluminum construction
 • Fits all GM LS Gen III or Gen IV engines equipped with LS3/L92 style rectangular port cylinder heads
 • Dual plane design for equal distribution and great mid-range torque without compromising top-end power

LS3/L92 & LS1/LS2/LS6 CARBURETTOR MID-RISE DUAL PLANE MANIFOLD
 Got an LS engine to get running? Nothing is easier than bolting on a carburetor. Holley's dual plane carbureted intake for GM's LS engines will help you get on the streets quick! Its dual plane design makes it perfect for low end torque, yet it still pulls all the way to 6,500 RPM! Our O-ring cylinder head mounting flange gaskets provide an OEM style seal and make installation a snap. Bolt one on today!
 • 1500-6500 RPM power band
 • 4150 square bore carb mounting flange
 • Optimized runner layout and constant cross sectional area provide a broad torque curve
 • Minimum carb flange height means it fits in vehicles with minimal or no hood modifications
 • Great for carbureted or throttle body EFI street applications
 • Cast aluminum construction and efficient casting design for light weight, consistent wall thicknesses and improved casting quality
 • Weighs 14.56 lbs.
 • Height (front) - 5.07" from front lifter valley cover to carb mounting flange
 • Height (rear) - 6.14" from rear lifter valley cover to carb mounting flange
 • Port size - 2.72" height x 1" wide LS1/LS2/LS6
 • Port size - 2.454" height x 1.09" wide LS3/L92
 • Mounting flange gasket type - O-ring
 • Includes Viton O-rings - Viton is a registered trademark of DuPont Performance Elastomers

LS3/L92 & LS1/LS2/LS6 CARBURETTOR MID-RISE SINGLE PLANE MANIFOLD
 Carbureted Single plane intake manifold. Fits all GM LS Gen III or IV engines equipped with LS1/LS2/LS6 style cathedral port cylinder heads & LS3/L92 style rectangular port heads.
 • 2500-7000 RPM power band • 4150 Square bore flange (accepts up to 1.75" diameter throttle bores)
 • Optimized runner layout and constant cross sectional area - broad torque curve, best vehicle performance from 2500-7000 RPM
 • Minimum carb flange height - fit in vehicles with minimum hood modifications
 • Cast aluminum construction - great manifold for centrifugal blower, turbocharged or NOS power adder applications
 • Efficient casting design - lightweight, consistent wall thicknesses, improved casting quality
 • Weight - 11.5 lbs.
 • Height (front) - 5.417" to the lifter valley cover flange at the engine block front flange
 • Port size - 2.659" height x .918" wide LS1/LS2/LS6
 • Port size - 2.50" height x 1.15" wide LS3/L92
 • Includes Viton O-ring intake to cylinder head gaskets - Viton is a registered trademark of DuPont Performance Elastomers

LS3-L92 LS MODULAR "HI-RAM" CARBURETED & EFI MANIFOLD

The Holley GM LS3/L92 Modular Hi-Ram Intake Manifold is introduced as a cost effective alternative to fabricated sheet-metal for high-performance applications where induction system height is not limited. Coupling this Hi-Ram intake with the high flowing LS3/L92 style cylinder heads has outstanding potential for N/A and forced induction applications at a budget-minded cost. Aggressive, bold, race-bred styling will make bad intentions clear for drag race, muscle car, marine, off-road, sandrails, pulling trucks, track, street-rod applications and more!

- Height (Carbureted or EFI, 2x4V Top Mount & Blank) – 11.08" to the lifter valley cover flange on engine block.
- Base Plenum Top Mounting Flange Height – 8.42" to the lifter valley cover flange on engine block.
- Port Size – 2.49" Height x 1.21" Wide
- Mounting Flange Gasket Type – Standard LS3 Molded O-Ring
- Plenum Top Gasket Type – 3/32" Round O-ring Cord
- Runner Length – 6.50", As-Cast Runner Cross-Sectional Area – Tapered 4.25 in² to 2.77 in²

Description	Part No.
LS3-L92 2X4 4150 Carburettor Hi-Ram Manifold With Fuel Rails	H0300-113
LS3-L92 2X4 4150 EFI Hi-Ram Manifold With Fuel Rails	H0300-115

LS3/L92 DUAL CARBURETTOR HI-RAM INTAKE MANIFOLD

The Holley GM LS3/L92 Modular Hi-Ram Intake Manifold is introduced as a cost effective alternative to fabricated sheet-metal for high-performance applications where induction system height is not limited. Coupling this Hi-Ram intake with the high flowing LS3/L92 style cylinder heads has outstanding potential for N/A and forced induction applications at a budget-minded cost. Aggressive, bold, race-bred styling will make bad intentions clear for drag race, muscle car, marine, off-road, sandrails, pulling trucks, track, street-rod applications and more!

- The base is designed to be modular in configuration to accept a wide range of carburetted and EFI tops and to be attractive to builders and fabricators as the foundation for custom induction systems.
- Runner length and the tapered cross-section designed to perform well for a wide range of engine configurations
- Cast aluminum construction.
- Intended for use on N/A or forced induction engines in the 6.0 to 7.0+ liter range, max power at 7000-8000-RPM.
- Plenum Top Gasket Type – 3/32" Round O-ring Cord
- Mounting Flange Gasket Type – Standard LS3 Moulded O-Ring
- Port Size – 2.49" Height x 1.21" Wide
- Runner Length – 6.50", As-Cast Runner Cross-Sectional Area – Tapered 4.25 in² to 2.77 in²
- Base Plenum Top Mounting Flange Height – 8.42" to the lifter valley cover flange on engine block.
- Height (Carburetted or EFI, 2x4V Top Mount & Blank) – 11.08" to the lifter valley cover flange on engine block.

- Port Size – 2.49" Height x 1.21" Wide
- Mounting Flange Gasket Type – Standard LS3 Molded O-Ring
- Plenum Top Gasket Type – 3/32" Round O-ring Cord
- Throttle Body Flange Location, with 92/102mm EFI Plenum Top : Height – 8.42" (from engine block lifter valley cover flange), Longitudinal Location – 3.84" (forward from engine block front flange), Angle – 25 deg. (down from vertical)
- Runner Length – 6.58", As-Cast Runner Cross-Sectional Area – Tapered 4.25 in² to 2.53 in²

Description	Part No.
LS1-LS2-LS6 X1 92mm T/Body EFI Hi-Ram Manifold With Fuel Rails	H0300-122
LS1-LS2-LS6 X1 105mm T/Body EFI Hi-Ram Manifold With Fuel Rails	H0300-122BK

LS1-LS2-LS6 LS MODULAR MID-RISE EFI MANIFOLD

The Modular Mid-Rise intake utilizes the popular Holley LS1/LS2/LS6 cathedral port Mid-Rise 2 x 4 intake Manifold along with a purpose built plenum base Adapter and a Holley 92MM EFI plenum top which converts it into a Mid-Rise EFI intake manifold. With a max overall height of only 10.44", the Mid-Rise Manifold is an excellent choice for street and performance street/strip applications with a powerband from 1,500-6,500 RPM and limited hood clearance. It's perfect for a blow-thru or turbocharged application.

- Provides great performance to 6500 rpm for street/strip performance applications while providing the look of a racing EFI intake manifold
- Unique modular design allows the combination of a traditional dual-plane layout with an EFI manifold plenum to produce great mid-range torque without compromising top end power
- Great for supercharged or turbocharged engines
- Power band from 1500-6500 rpm
- May require an aftermarket hood for some vehicle applications.
- Cast aluminum construction
- Intended for use on all GM LS Gen III or IV engines equipped with LS1/LS2/LS6 style cathedral port cylinder heads (recalibration of the ECU may be required when using this intake manifold design with OE ECU).

Description	Part No.
LS1-LS2-LS6 X1 92mm T/Body EFI Mid Rise Manifold With Fuel Rails	H0300-126
LS1-LS2-LS6 X1 105mm T/Body EFI Mid Rise Manifold With Fuel Rails	H0300-127

LS3/L92 MODULAR MID-RISE EFI MANIFOLD

The Modular Mid-Rise intake utilizes the popular Holley LS3/L92 rectangle port Mid-Rise intake manifold along with a purpose built plenum base adapter and a Holley 105MM EFI plenum top which converts it into a Mid-Rise EFI intake manifold. With a max overall height of only 10.44", the Mid-Rise manifold is an excellent choice for street and performance street/strip applications with a powerband from 1,500-6,500 RPM and limited hood clearance. It's perfect for turbocharged, or naturally aspirated applications. This manifold is modular, and the plenum adapter (PN 300-231) will accept all of the popular Holley LS Hi-Ram plenum tops as a foundation for custom induction systems.

- 1500-6500RPM Power Band
- 105MM EFI Plenum
- Overall Height of 10.44 inches
- Mid-Rise manifold for excellent street/strip performance
- Fits GM LS3/L92 engines

Description	Part No.
LS3-L92 X1 105mm T/Body EFI Mid-Rise Manifold With Fuel Ra	H0300-128

LSX High Flow Billet Fuel Rails

The FAST High Flow Billet Fuel Rails feature a larger internal diameter that dampens the pulses and provides increased fuel volume, ensuring that your injectors never run dry. In addition, they yield better fuel distribution and ultimately greater horsepower. Featuring high strength billet, lightweight, red anodized aluminum construction, FAST LS1 fuel rails deliver performance in addition to a show car quality appearance. The FAST fuel rails are available in a component-matched kit, including black anodized #8 fittings and "super seal" o-rings or the fuel rails may be ordered without the hardware.

GM LS INTAKE MANIFOLD

The Aeroflow Performance sheet metal fabricated intake manifolds perform well and offer an extremely good value for a performance intake manifold for the very popular GM LS engine family. This low profile and compact design were developed to allow the end user to fit under a stock bonnet. Short intake runners with tapered top are designed to increase air velocity and more evenly distribute airflow to all 8 cylinder improving performance and throttle response.

We use thick 3mm (1/8") T6061 sheet aluminum for the intake plenum for maximum rigidity, so you will not have any issues with the intake manifold distorting under boost or warping during installation. There are LS intake manifolds are available for both GM OE LS cylinder head types, LS1/2/6 (cathedral port) or LS3. Powered coated black creates stealthy engine bay styling. Each manifold is ready to bolt on out of the box and are designed to accept 102mm throttle bodies and include high flow fuel rail kit, all gaskets and hardware for a hassle-free installation.

AF6233-5000	GM LS1 / LS2 intake manifold
AF6233-6000	GM LS3 intake manifold
AF6233-5001	Replacement GM LS Fuel Rail Kit

GM LS INTAKE MANIFOLD O-RING GASKET SET

These replacement intake O-ring gaskets are specifically designed to suit our GM LS sheet metal fabricated intake manifolds. These are included in the intake manifold kit AF6233-5000 and AF6233-6000 intake manifolds. The 8-piece O-ring kit will also suit all GM LS series engines.

GM LS THROTTLE BODY O-RING GASKET

These replacement intake O-ring gaskets are specifically designed to suit our GM LS sheet metal fabricated intake manifolds. These are included in the intake manifold kit AF6233-5000 and AF6233-6000 intake manifolds. The 8-piece O-ring kit will also suit all GM LS series engines.

Aeroflow Aluminium Intake Manifolds

Get the maximum power from your carbureted engine with the Aeroflow selection of carbureted cast intake manifolds. Whether it be dual-plane or single-plane these intake manifolds are designed to keep your air and fuel distribution going into the engine at a steady and even flow for maximum performance and efficiency. The carburetor-mounting pad is designed to accept either spread bore or aftermarket square-bore carburetors with either manual or electric choke options available on today's market.

AEROFLOW

HOLDEN MANIFOLDS

AF6000-4000 Holden 253 308 single plane low rise 1500 - 6500 RPM. **NATURAL** Cast Finish.
AF6200-4000 Holden 253 308 single plane low rise 1500 - 6500 RPM. **BLACK** Finish.

AF6000-4001 Holden 304 vn intake manifold single plane low rise 1500 - 6500 RPM. **NATURAL** Cast Finish. Will not suit 308 Early Model Heads.

Accepts late model water neck, air conditioning and alternator.

AF6200-4001 Holden 304 vn intake manifold single plane low rise 1500 - 6500 RPM. **BLACK** Finish. Will not suit 308 Early Model Heads. Accepts late model water neck, air conditioning and alternator.

Edelbrock

Available in Four Finishes for the Look You Want. See Individual Manifold Listings for Part Numbers!

NEW ENDURASHINE™ FINISH

Bright silver chrome finish with powder coated durability Resists discoloration from heat. Clear top coat enhances polished aluminium look for a great appearance. Three step Vacuum Metalizing Process: base coat, aluminium coat, and clear top coat to enhance abrasion and chemical resistance. Offers a bright, durable, maintenance-free polished aluminium look. 5-digit part numbers ending in "4" signify EnduraShine Finish

BLACK POWDERCOATED FINISH

Black powdercoated finish that features a finely textured surface which not only looks great but enhances durability too. 5-digit part numbers ending in "3" signify black powdercoated finish.

POLISHED FINISH

Buffed aluminium for a brilliant shine. Special order any manifold as polished. 5-digit part numbers ending in "1" signify polished finish

AS-CAST FINISH

Natural satin finish. The look of performance for decades.

BUICK

Buick/Rover 215 V8

PERFORMER ROVER (idle-5500 rpm) Designed for Rover 3500cc V8s (1968 & later) and 1961-63 Buick and Oldsmobile aluminium 215 V8s. Manifold not equipped with EGR. Will not work with OEM carburetors (except Carter AVS).

ED2198 Performer Rover (non-EGR)

Buick 400-455 V8

PERFORMER BUICK 455 (idle-5500 rpm) Designed for street 400-430-455 c.i.d. Buick V8s. #2146 is stock replacement/street legal part for 400, 430 and 455 V8s; 1967-71; except stock equipped EGR. Manifold not equipped with EGR. Will fit cold air induction hoods. Will not fit Buick 350.

ED2146 Performer Buick 455 (non-EGR)

Buick 400-455 V8

BUICK B-4B (idle-5500 rpm) Back by popular demand, #2515 is a resurrection of the popular B-4B manifold made in the late 1960s for street 400-430-455 c.i.d. Buick V8s. The only change to the original design is the addition of our proven Performer-style carb pad that accepts either square-bore or spread-bore carbs, making this manifold an excellent choice for both restoration and performance-minded Buick fans.

ED2515 Buick B-4B Manifold (non-EGR)

CADILLAC

Cadillac 472-500 V8

PERFORMER CADILLAC (idle-5500 rpm) This Performer is designed for 1968-76 Cadillac 472 and 500 cubic-inch engines. For either square- or spread-bore carbs, #2115 is the first intake designed specifically for high-performance Cadillacs using standard heads. Like all Edelbrock Performers, this manifold increases torque and horsepower from idle to 5500 rpm. The broad power band is ideal for high-performance street and engine swap applications. Specs on this non-EGR manifold include a carb pad height that's 3" taller than stock. Dropped divider wall evens air/fuel ratio throughout the rpm range. Stock air conditioning compressor will not fit.

ED2115 Performer Cadillac (non-EGR)

CHEVROLET SMALL BLOCK

Chevrolet 90° V6

PERFORMER 90° V6 (idle-5500 rpm) Designed for street 1985-95 200-229-262 c.i.d. (3.8 and 4.3L) Chevy V6s. Will not accept stock automotive carbs or 262 T.B.I. unit. Dual bolt pattern waterneck fits both automotive and marine applications. Produced 18 more horsepower than an older manifold design on 4.3L marine engine.

ED2111 Performer 90° V6 (non-EGR)

ED3785 Performer 60° V6 2.8L

**Chevrolet 262-400
Small-Block V8
PERFORMER EPS (idle-5500**

rpm) Designed for 1986 and earlier 262-400 cubic-inch Chevs, the Performer EPS dual-plane manifold is optimized to deliver superior performance with Edelbrock square-bore Performer Series or Thunder Series AVS carburetors. This small-block Chevy manifold has a runner design that's "tuned" for peak torque around 3500 rpm on a 350-inch engine and it's ideal for power from off-idle to 5500 rpm. Dyno tests showed gains of 5 hp and 9 ft/lbs of torque over the Edelbrock Performer manifold #2101 on a 350 Chevy.

- ED2701** Performer EPS (non-EGR)
- ED27014** Performer EPS with EnduraShine finish (non-EGR)
- ED27034** Performer EPS and Oil Fill Tube with EnduraShine finish (non-EGR)

PERFORMER EPS VORTEC (idle-5500 rpm)

Available for small-block Chevs with Vortec or Edelbrock E-Tec cylinder heads, the Performer EPS dual-plane manifold is optimized to deliver superior performance. The runner design is "tuned" for peak torque around 3500 rpm on a 350-inch engine and it's ideal for power from off-idle to 5500 rpm. Dyno tests showed gains averaging 5+ ft/lbs. of torque from 3000 to 4500 rpm for more performance where you need it most. Match with a dependable Edelbrock square-bore carburetor for maximum performance gains. Will not fit under stock Corvette hood.

- ED2716** Performer EPS Vortec (non-EGR)
- ED27164** Performer EPS Vortec with EnduraShine finish (non-EGR)

PERFORMER VORTEC (idle-5500 rpm)

Based on the popular and powerful Edelbrock #2101, this dual-plane intake is designed for the street rod, industrial and engine swap market utilizing 262-400 c.i.d. Chevy V8s with 1996 and later Vortec (L31) cast iron or the new Edelbrock E-Tec aluminum heads. Manifold has provisions for external water bypass and may be used on either Vortec blocks or 1995 and earlier blocks. No provision for exhaust heated chokes. Accepts both square-bore and spread-bore carbs and late model waterneck, alternator, HEI and air conditioning brackets. Will not fit under stock Corvette hood. Available with standard finish, polished or with new EnduraShine or PermaStar finish for a look you've got to see to believe, see Optional Finishes. For high performance engines operating from 1500-6500 rpm, see the Performer RPM Vortec manifold.

- ED2116** Performer Vortec (non-EGR)
- ED21164** Performer Vortec with EnduraShine Finish (non-EGR)
- ED21163** Performer Vortec Black (non-EGR)

PERFORMER - '86 & EARLIER (idle-5500 rpm)

Designed for street 1955-86 262-400 c.i.d. small-block Chevs. Performers accept late-model choke, waterneck, air-conditioning, alternator and H.E.I. Has provisions to add oil fill tube. Not for 1987 and later cast iron or Chevy Bowtie heads. Will fit 1987 and later stock aluminum heads. Available with standard finish or polished.

- ED2101** Performer (non-EGR)
- ED21011** Polished Performer #2101 (non-EGR)

PERFORMER - FOR 1987-95 CAST IRON CYLINDER HEADS (idle-5500 rpm)

Designed for street 262-400 c.i.d. Chevy V8s that have heads with canted center bolt holes. Both accept late-model waterneck, air-conditioning, alternator, H.E.I. and have rear water crossovers. #2104 accepts exhaust-heated chokes. For 1987-95 stock aluminum heads use #2101. Will not fit Chevrolet Bowtie or LT1 heads.

- ED2104** Performer (non-EGR)

PERFORMER AIR-GAP (idle-5500 rpm)

Designed for 1955-86 262-400 c.i.d. small-block Chevs, the Performer Air-Gap features the air-gap design for the ultimate street performance in the idle to 5500 rpm range. This design features an open air space that separates the runners from the hot engine oil resulting in a cooler, denser charge for more power. High-velocity runners deliver excellent throttle response throughout the power band. The great looks of the Performer Air-Gap along with the solid idle to 5500 rpm performance makes this an ideal choice for street rods and street machines. Performer Air-Gap #2604 is for 1987-95 cast iron heads with canted center bolt holes. No provision for exhaust heated chokes or exhaust crossover. Fits spread-bore or square-bore carburetors.

- Available with standard finish or polished.
- ED2601** Performer Air-Gap (non-EGR)
- ED26011** Polished Performer Air-Gap (non-EGR)
- ED2604** Performer Air-Gap for 1987-95 cast iron heads (non-EGR)

PERFORMER RPM (1500-6500 rpm)

Designed for 1955-86 262-400 c.i.d. Chevy V8s for maximum power and a broad torque curve for high-performance street/marine. Provides power like a single-plane and throttle response like a dual-plane. Has provisions to add oil fill tube. No provisions for exhaust heated or stock-style choke. Accepts late-model waterneck, air-conditioning, alternator and H.E.I. Will fit cast iron Chevrolet Bowtie heads, but will not fit 1987 and later cast iron heads. Will not fit under stock Corvette hood.

- ED71013** Performer RPM (black)
- ED71011** Polished Performer RPM (non-EGR)
- ED71014** Performer RPM with EnduraShine Finish (non-EGR)

PERFORMER RPM Q-JET (1500-6500 rpm)

Designed for 1955-86 262-400 c.i.d. Chevy V8s for spread-bore (Q-Jet) or square-bore carbs. Delivers maximum power and a broad torque curve for high-performance street. Carb pad will accept square-bore carbs without adapters. Performer RPM Q-Jet has same provisions as #7101 (see above).

- ED7104** Performer RPM Q-Jet (non-EGR)

PERFORMER RPM VORTEC (1500-6500 rpm)

This single four-barrel intake is designed for the street rod, marine and engine swap market utilizing 262-400 c.i.d. Chevy V8s with 1996 and later Vortec (L31) cast iron or the Edelbrock E-Tec aluminum heads. An external water bypass boss is machined into the front of the water crossover for use on 1996 and later Vortec production engines. Manifold accepts square-bore carbs only.

- ED7116** Performer RPM Vortec
- ED71163** Performer RPM Vortec black
- ED71164** Performer RPM Vortec w/ EnduraShine finish

RPM AIR-GAP (1500-6500 rpm)

Designed for 1955-86 262-400 c.i.d. Chevrolet V8s, the award-winning RPM includes rear water outlets, two distributor clamp locations and nitrous bosses. Accepts all 1976 and later alternator and A/C brackets for the street. The heater outlet boss is angled for proper fit over the valve cover. The temp sensor boss clears all waternecks. For square-bore carburetors only. No provision for exhaust-heated chokes and no exhaust crossover. Not for 1987 and later cast iron heads and will not fit under stock Corvette hood.

- ED7501** RPM Air-Gap (non-EGR)
- ED75013** RPM Air-Gap NASCAR Edition (non-EGR)(Black Finish)
- ED75014** RPM Air-Gap with EnduraShine Finish (non-EGR)

TORKER II (2500-6500 rpm)

Designed for 1955-86 high-performance street 262-400 c.i.d. small-block Chevs. Accepts late-model waterneck, air-conditioning, alternator and H.E.I. Will fit Corvette and '87 and later stock heads. Will not fit '87 and later cast iron heads and will not cover port openings of Chevrolet Bowtie or LT1 heads. Not for heavy vehicles (trucks, vans etc.); use Performer EPS #2701.

- ED 5001** Torker II (non-EGR)

RPM AIR-GAP VORTEC (1500-6500 rpm)

This single four-barrel intake is designed for 262-400 c.i.d. Chevy V8s with 1996 and later Vortec (L31) cast iron or the new Edelbrock E-Tec aluminum heads. An external water bypass boss is machined into the front of the water crossover for use on 1996 and later Vortec production engines. Includes rear water outlets, nitrous bosses, a temp sensor boss that clears all waternecks, two distributor clamp locations and a heater outlet boss that's angled for proper fit over the valve cover. Accepts 1976 and later alternator and air-conditioning brackets for street installations. For square-bore carbs. No provision for exhaust-heated chokes and no exhaust crossover. Will not fit under stock Corvette hood. Available with standard finish, polished or with PermaStar or new EnduraShine finish for a look you've got to see to believe, see Optional Finishes.

- ED7516 RPM Air-Gap Vortec (non-EGR)**
- ED75163 RPM Air-Gap Vortec black**
- ED75164 RPM Air-Gap Vortec with EnduraShine finish (non-EGR)**

RPM AIR-GAP DUAL-QUAD (1500-6500 rpm)

Designed for 1955-86 S/B Chevs, this intake stands 1-5/8" taller than the low-profile C-26 intake and offers performance improvements in the 1500-6500 rpm range. The large runners feature our unique Air-Gap design that separates the runners from the hot engine valley for a cooler, denser charge. Also available as a complete carb and manifold kit, see page 15. Will not fit under stock Corvette hood.

- ED7525** RPM Air-Gap Dual-Quad (non-EGR)

RPM AIR-GAP DUAL-QUAD VORTEC (1500-6500 rpm)

Designed for 262-400 c.i.d. S/B Chevs with 1996 and later Vortec cast iron or Edelbrock E-Tec heads, this intake stands 1-5/8" taller than the low-profile C-26 dual-quad intake and offers performance improvements in the 1500-6500 rpm range. The larger runners feature our unique Air-Gap design that separates the runners from the hot engine valley for a cooler, denser charge.

- ED75264** RPM Air-Gap Dual-Quad Vortec with EnduraShine™ finish (non-EGR)

C-26 DUAL-QUAD (1500-6500 rpm)

Designed for 1955-86 262-400 c.i.d. S/B Chevs, this dual-quad is low profile for hood clearance on most vehicles. Air-conditioning bosses and front oil filler tube boss included. Stock alternator brackets do not fit. C-26 Dual-Quad manifold #5426 is designed for Chevy V8s with 1996 and later Vortec (L31) cast iron or the Edelbrock E-Tec aluminum heads. An external water bypass boss is machined into the front of the water crossover for use on 1996 and later Vortec production engines. Carb center to carb center: 6-7/16". Use with Performer-Plus cam #2103 for low-end torque or Torker-Plus cam/kit #5002 for top-end power.

- ED5425** C-26 Manifold (non-EGR)
- ED54251** Polished C-26 Manifold (non-EGR)

STREET TUNNEL RAM (3500-7500 rpm)

Designed for 302-327-350-400 c.i.d. small-block Chevy V8s operating below 7500 rpm where low-end torque is not a prime factor. Great for engines with slightly modified heads. Applicable to street machines, street rods, pro street and marine. Will not fit 1987 and later cast iron heads. Use with Torker-Plus camshaft kit #5002 for low-end torque or Performer RPM camshaft kit #7102 for more top-end power.

- ED7071** Throttle Linkage for sideways mounted carbs
- ED6999** Gasket (included with base and top)

C-357-B THREE-DEUCE (idle-5500 rpm)

Designed for 1955-86 262-400 c.i.d. small-block Chevs, this manifold has a balanced 180° firing order port runner arrangement. It contains an exhaust gas heat riser and offers excellent performance potential. Front oil filler tube boss included. Carb center-to-center: 5-1/2". Use with Performer-Plus camshaft and lifter kit #2103 for low-end torque or Torker-Plus cam/kit #5002 for top-end power. ED5418 & ED5419 accept Oil Fill Tube and Breather ED4803

- ED5419** C-357-B Manifold (non-EGR)
- ED5418** C-357-B Manifold for 3-bolt Carbs (non-EGR)

TORKER II (2500-6500 rpm)

Designed for 1955-86 high-performance street 262-400 c.i.d. small-block Chevs. Manifold accepts late-model waterneck, air-conditioning, alternator and H.E.I. Will fit Corvet and 1987 and later stock aluminum heads. Will not cover port openings of Chevrolet Bowtie or LT1 heads. Not for heavy vehicles (trucks, vans etc.); use Performer EPS #2701.

- ED5001** Torker II (non-EGR)

VICTOR JR. (3500-8000 rpm)

For high-performance street to drag/circle track racing. They provide maximum performance for engines with standard port location, iron and aluminum cylinder heads. The low-profile of the #2975 works well in applications with minimal hood clearance and where 1" or 2" spacers can be used for performance tuning. The Victor Jr. Port Matched manifold has CNC-blended port exits that match any competition head using Fel-Pro gasket #1205.

- ED2975** Victor Jr.
- ED29751** Polished Victor Jr.
- ED29754** Victor Jr. with EnduraShine Finish
- ED2900** Victor Jr. Port Matched
- ED2999** Victor Jr. Tall (1" taller)

VICTOR JR. HIGH-PORT (4000-8000 rpm)

Ideal for bracket race and 9:1 compression, 390 cfm carb oval track applications, this manifold provides excellent mid-range to top-end power for engines with raised-port 23° heads such as Pontiac #10045434, #10033867 and Chevrolet Raised Runner Bowtie heads #10051101. Runners have a 2.80 square-inch cross-section. Relief for center water outlets included.

- ED2967** Victor Jr. High-Port

SUPER VICTOR CNC (3500-8000 rpm)

This special version of the Super Victor was developed for competition high rpm or large displacement small-blocks. It is CNC machined in all critical areas... plenum chamber, port exits, divider walls and runner roofs for optimum performance and out-of-the-box convenience. See Super Victor #2925 for application information.
ED2825 Super Victor CNC

SUPER VICTOR 4500 ED2970 & ED2971

Designed for small-block Chevys with 4500 Series carburetors and 23° heads, the Super Victor #2970 is for standard port locations and #2971 is for raised port heads. They have a large runner cross-sectional area (3.2 square inches) and highly efficient cloverleaf plenum design. In dyno tests on a 358-inch small-block, #2970 made 10 horsepower more than the best competitor's manifold!

- ED2925** Super Victor for 23° Heads
- ED29254** Super Victor for 23° Heads with EnduraShine Finish
- ED2913** Super Victor for Vortec Heads
- ED29135** Super Victor EFI for E-Tec/Vortec Heads
- ED2970** Super Victor 4500 for 23° Heads

VICTOR HIGH-PORT (4500-8500 rpm)

Ideal for bracket race and high rpm circle track applications, this manifold is designed for raised-port 23° heads such as Pontiac ED10045434, ED10033867 and Chevrolet Raised Runner Bowtie heads ED10051101. The deep plenum design is beneficial for restrictor plate applications. Runners have a 3.0 square-inch cross-section. Relief for center water outlets included.
ED2968 Victor High-Port

VICTOR E (4500-8500 rpm)

Ideal for high-rpm drag race applications, the Victor E has a larger and deeper plenum than the #2975. It provides maximum power in the higher rpm range for engines with standard port location iron and aluminium heads. Runners have a tapered cross-section, and plenty of material at the manifold port exit allows port matching to the small port heads used in NHRA Super Stock classes. 1" or 2" spacers can be used for performance tuning. The large plenum and runner volume of this manifold is also ideal for alcohol-fueled applications. Victor EFI also available with electronic fuel injector bosses, see Street & Competition EFI Manifolds.
ED2978 Victor E
ED29785 Victor EFI

VICTOR 18° 2.9 (5000-8500 rpm)

Designed for use on 9.5:1 compression engines with 390 cfm carbs and GM or Edelbrock 18° heads. Runners have a 2.9 square-inch cross-section. Manifold height from the end seal to the carb pad is 7.03". Victor 18° 2.9 Spider #2955 has the same plenum and runners as #2950 in a two-piece design. #2955 can be used with Edelbrock base plate #2992.

- ED2950** Victor 18° 2.9
- ED2955** Victor 18° 2.9 Spider
- ED2992** Victor 18° Base (base of 2-piece manifold)

VICTOR 18° 3.2 (5000-8500 rpm)

The Victor 18° #2959 features intake runners with a large cross-section area of 3.2 square inches for max high-end horsepower in engines operating from 5000 to 8500 rpm with GM or Edelbrock 18° heads. This intake is a one-piece manifold with the same runner and plenum design as the two-piece #2958 Spider used in circle track applications. It is ideal for the Hav-A-Tampa Series, or for any racer desiring the performance of the #2958 in a one-piece manifold. The Spider is part of a two-piece design and can be used with Edelbrock base plate #2992.

- ED2959** Victor 18° 3.2
- ED2958** Victor 18° 3.2 Spider (top of 2-piece manifold)
- ED2992** Victor 18° Base (base of 2-piece manifold)

VICTOR 18° HIGH-PORT (4500-8500 rpm)

Designed for engines using Edelbrock or GM 18° High-Port heads (#10134363 and #10134364), #2995 runners have a 2.85 square-inch cross-section. Features 1/2" female pipe bosses over rear water outlets to allow for customization of cooling system and dual distributor clamp locations for ease of timing adjustment.
ED2995 Victor 18° High-Torque

VICTOR RAM (6500-10,000 rpm)

This tunnel ram manifold for standard 23° S/B Chevy heads features include effective methods for the control of high velocity mixture flow, especially at engine speeds above 8500 rpm. Removable top mounts various carburetors. Suited to drag race engines operating at 6500-10,000 rpm and race boat engines above 7000 rpm. Does not fit raised port cylinder heads or 1987 and later cast iron heads.
ED7070 Victor Ram (base only)

TOP FOR VICTOR RAM ED7070

- ED7071** Throttle Linkage (sideways)
- ED6988** Top Gasket (included with top)

GLIDDEN VICTOR SPIDER (5000-8500 rpm)

Intended for 375 c.i. and up high output drag race engines, this manifold was developed in conjunction with noted drag racer Billy Glidden and is specifically designed to complement the flow characteristics of fully ported 18° and 15° cylinder heads. It features a 4500 series carb flange, and the dividers are pulled back to increase plenum size and shorten the runners for improved high rpm performance. The runners are wider at the plenum, producing approximately 3.6 square inches area at the opening.
ED2858 Glidden Victor Spider-Type Manifold (for 15° & 18° heads)
ED2992 Victor 18° Base (base of 2-piece manifold)

VICTOR GLIDDEN 18° CHEVY (5000-8500 rpm)

Designed in conjunction with noted drag racer Billy Glidden, Victor Glidden #2859 is for all-out nitrous-assisted drag race applications. It features intake runners with a large cross-section area of 3.2 square-inches for maximum high-end horsepower in engines operating from 5000 to 8500 rpm with GM or Edelbrock 18° heads. Carb mount flange and plenum are machined for 4500 Series carbs and require port matching and blending prior to use.
ED2859 Victor Glidden (for 18° Chevy with 4500 Series carburetor)

ED7139

PRO-FLO XT

MANIFOLDS FOR S/B CHEVY, LS SERIES CHEVY, B/B CHEVY, B/B CHRYSLER & S/B FORD

The Pro-Flo XT intakes are engineered with a large plenum and long tapered runners to deliver maximum horsepower and broad torque throughout the rpm range (1500-6500 rpm). A new front mount 90mm throttle body feeds the intake all the air it needs for maximum performance. Aesthetics were also a major consideration in the design, offering enthusiasts custom looks and choice of as-cast aluminum or black powder coated finish with contrast machining.

- Universal fuel injection intakes are designed for use with virtually any fuel injection system
- Fuel injector bosses are machined to properly position the fuel injector for optimum performance
- Matching fuel rail kits are offered to provide a complete bolt-on EFI intake package

CHEVROLET / HOLDEN LS SERIES

PERFORMER RPM LS1 (1500-6500 rpm)

For Chevrolet LS1 V8 This powerful new manifold is designed for the popular Chevrolet LS1 (5.7L) small-block V8 originally used in 1997 and later Corvettes and 1998-02 Camaros and Firebirds. It also fits the Corvette LS6 engine and any other Gen III engine including the LM7 (5.3L), LR4 (4.8L), and LQ4 (6.0L). It allows the use of a carburetor on these originally computer-controlled engines, offering maximum power and a broad torque curve from 1500 to 6500 rpm. This manifold made 410 hp and 418 ft/lbs. of torque in dyno tests with our matching cam #2215 and Performer Series carb #1413. The Performer RPM LS1 includes a wiring harness and unique electronic Timing Control Module made by MSD® which works with OE sensors to fire the coil-on-plug ignition system and offers a choice of six timing curves.
ED7118 Performer RPM LS1 Manifold & Timing Control Module
ED71187 Performer RPM LS1 Manifold ONLY (non-EGR)

LS1/LS6 Valley Plate

This as cast aluminium plate is intended for use on 1997-2004 GM LS1/LS6 engines and similar GM Gen III engines that have been converted from EFI to carbureted set ups. The plate includes a breather boss that will need to be drilled and tapped by those retaining the stock LS6 breather configuration or for LS1 users looking to convert to a LS6 style. Note: will not work with LS2, LS7, LSX or any other GM GEN IV engines.
ED7788 LS SERIES VALLEY PLATE

PERFORMER RPM LS3 (1500-6500 RPM)

Designed for Gen IV engines with LS3, L92 and L76 rectangular port cylinder heads. The Performer RPM LS3 manifold is ideal for anybody looking to build a carbureted LS3 or LS2 engine with an operating range between 1,500 - 6,500 rpm. It allows the use of a carburetor on these originally computer-controlled engines, offering maximum power and a broad torque curve. It features a high-rise dual-plane design combined with a plenum that has been optimized for square-bore carburetors. Our advanced casting techniques allowed us to create a lightweight casting that weighs in at 14 lbs. Performer RPM LS3 includes a provision for mounting an MSD Ignition Timing Control Module #6012, including passages for routing the coil wire harness, for a clean look. A special throttle and trans bracket that works with 700R-4, 200-4R and Turbo 350 transmissions is also included, making this an easy retro-fit into any muscle car, street rod or marine application.
ED71197 Performer RPM LS3 Intake Manifold Carbureted

VICTOR JR. L76/L92 (3500-7500 rpm)

For LS Gen IV with L92 Cylinder Heads/Designed for Gen IV LS engines equipped with L92 cylinder heads, this manifold is for EFI or carburetted racing applications operating between 3500-7500 rpm and uses a standard square-bore carb flange that is compatible with both Edelbrock EFI intake elbows or four-barrel throttle bodies. EFI manifold ED28455 has additional bosses and machining that allow for the use of fuel injectors when combined with the ED3638 fuel rail kit (sold separately).

ED28457 Victor Jr. Gen IV carburetted manifold for L92 heads

CHEVROLET BIG BLOCK

Chevrolet 396-502 V8 PERFORMER 2-O (idle-5500 rpm)

Designed for street 396-502 c.i.d. big-block Chevy V8s using general duty oval-port cylinder heads. #2161 is stock replacement /street legal part for 396, 402, 427 and 454 V8s with OEM 4-bbl. carb.; 1965-72 (1973 non-CA) passenger cars and 1966-83 trucks, Suburbans and heavy vehicles; except stock equipped EGR. #3761 is stock replacement/street legal part for 454 V8s with OEM 4-bbl. carb.; 1972-89. Will not fit under hood of Corvette without hood modifications. Will not fit "tall block" V8s. May be used with OEM or aftermarket carbs. Will fit 1965-90 oval port heads. Available with standard finish, polished or with new EnduraShine or PermaStar® Chrome Finish for a look you've got to see to believe, see Optional Finishes.

ED2161 Performer 2-O (non-EGR)

TORKER II 2-O (2500-6500 rpm)

Designed for street 396-502 c.i.d. Chevy V8s with large oval-port cylinder heads (1975 and earlier). Will fit under stock hood of Corvette without modification. Manifold not equipped with EGR. Will not fit "tall block" V8 engines. Must use manual or electric choke carburetor.

ED5061 Torker II 2-O (non-EGR)

VICTOR JR. LS1 (3500-7500 rpm)

For Chevrolet LS1 V8 Carburetted Applications. With an operating range of 3500-7500 rpm, this high-rise single plane intake is capable of supporting up to 600 hp. Like our Performer RPM LS1 intake, the Victor Jr. LS1 accepts a square bore carburetor and comes with an electronic timing module that picks up MAP, crank position, and cam position in order to drive the stock Coil-on-Plug ignition system. This module also offers a choice of several built-in timing curves, each tailored for engine displacement, cam profiles, and fuel grades. Includes a throttle bracket designed to work with 700R-4, 200R-4 and Turbo 350 transmissions. Most applications will require hood modification.

SUPER VICTOR LS3 (3500-7500 RPM)

Designed for Gen IV LS engines equipped with LS3 cylinder heads, these new Super Victor intake manifolds are ideal for anyone building a 700+ HP carburetted or EFI large displacement racing engine operating between 3,500 - 7,500 rpm.

These new Super Victor intake manifolds are designed with 24% larger runners than our Victor Jr. #28457 along with a larger 4500 style plenum. The large plenum makes these intake manifolds ideal for nitrous and forced induction applications. They also feature tapered runners for increased flow at high rpm. Available with a 4150 or 4500 series carburetor flange. The Super Victor 4500 series manifolds can accommodate bores up to 2.25". Super Victor #28215 and #28265 include machined fuel injector bosses. A carburetor mounted style throttle bracket is recommended.

ED28265 EFI Manifold for 4150 Style Throttle Bodies

SUPER VICTOR LS1 (3500-8000 rpm)

Carburetted or Competition EFI for GM Gen III Building on the success of the Victor Jr. LS1 manifold, the Super Victor LS1 offers greater air flow potential for ever bigger power gains from these modern engines. The carb mount pad is 1.12" taller than the Victor Jr. LS1, and the port exits have been increased to 1.08" x 2.74". Use Edelbrock Timing Control Module #91238 to drive the stock Coil-on-Plug ignition system. This manifold has already been accepted by NASCAR for use in the Grand National West/Grand National East series. Super Victor EFI

LS1 manifold #28095 is for high-output competition EFI systems and features precisely positioned and machined injector bosses for excellent fuel spray pattern and maximum power. Universal 4-Barrel Throttle Bodies, fuel rails, fuel injectors, fuel pumps and regulators are available separately to complete your competition EFI system.

ED28097 Super Victor LS1 manifold (for use with carburetor)

ED28095 Super Victor LS1 EFI manifold

CROSS-RAM LS3 (1500-7000 RPM)

Designed for Gen IV engines with LS3, L92 and L76 rectangular port cylinder heads. The Cross-Ram LS3 is ideal for anybody looking to combine great looks and outstanding performance between 1,500 - 7,000 rpm. The unique dual-plenum design features 13" long runners with flanges that will accept two, 90mm GM LS3 throttle bodies. The unique cross-ram dual-plenum design is ideal for twin turbo applications. When matched with high flowing air filters and inlet tubes, the dual-plenum system gives neck-snapping performance with plenty of options for engine builders and tuners. Dyno testing resulted with gains of 27 horsepower and 28 ft.-lbs. of torque over a popular aftermarket manifold.

PERFORMER RPM 2-O (1500-6500 rpm)

Designed for street 396-502 c.i.d. Chevy V8s with large oval-port cylinder heads (1975 and earlier). This manifold offers the latest technology in dual-plane high rise design and builds outstanding horsepower while maintaining good torque and driveability. No provisions for exhaust heated chokes. Accepts late-model waterneck, air-conditioning, alternator and HEI equipment. Will not fit under stock hood of Corvette, 1965-67 Chevelle, or 1967-81 Camaro.

ED7161 Performer RPM 2-O (non-EGR)

ED71611 Polished Performer RPM 2-O (non-EGR)

PERFORMER RPM 2-R (1500-6500 rpm)

Designed for street 396-502 c.i.d. Chevrolet V8s with high-performance rectangular-port cylinder heads. This manifold offers the latest technology in dual-plane high-rise design. It offers maximum horsepower with a broad torque curve for great street high-performance. No provisions for exhaust heated chokes. Accepts late-model waterneck, air-conditioning, alternator and HEI equipment. Will not fit under stock hood of Corvette, 1965-67 Chevelle or 1967-81 Camaro.

ED7163 Performer RPM 2-R (non-EGR)

RPM AIR-GAP 2-O (1500-6500 rpm)

Designed for street 396-502 c.i.d. Chevy V8s with large oval-port cylinder heads (1975 and earlier), the new RPM Air-Gap incorporates the same race-winning technology that's been used on our Victor Series competition intakes for years. The air-gap design features an open air space that separates the runners from the hot engine oil resulting in a cooler, denser charge for more power. Includes rear water outlets, two distributor clamp locations and nitrous bosses. Accepts all late model alternator and A/C brackets for the street. For square bore carburetors only. No provision for exhaust heated chokes and no exhaust crossover. Will not fit under stock hood of Corvette, 1965-67 Chevelle or 1967-81 Camaro. Available with standard finish, polished or with PermaStar® Chrome Finish or new EnduraShine finish for a look you've got to see to believe, see Optional Finishes.

ED7561 RPM Air-Gap 2-O (non-EGR)

VICTOR 454-R CNC (3500-8000 rpm)

This special version of the Victor 454-R for big-block Chevys is CNC-machined for Edelbrock by Reher-Morrison Racing Engines. The same air-flow technology that goes into winning RMRE Super Series engines is now available to you right out of the box. Although gains will vary depending on the application, typical performance improvements are 15 horsepower over as-cast manifolds. Victor 454-R CNC manifold is an ideal manifold for racing engines from 454 up to 555 cubic inches.

ED2807 Victor 454-R CNC

RPM AIR-GAP 2-R (1500-6500 rpm)

Designed for street 396-502 c.i.d. Chevrolet V8s with high-performance rectangular port heads, the RPM Air-Gap incorporates the race-winning technology that's been used on our Victor Series intakes. The open air space separates the runners from the hot engine oil, and as a result, the air/fuel mixture stays cooler for a denser charge and more power. Includes rear water outlets, two distributor clamp locations and nitrous bosses. Accepts all late model alternator and A/C brackets for the street. For square-bore carburetors only. No provision for exhaust heated chokes and no exhaust crossover. Will not fit under stock hood of Corvette, 1965-67 Chevelle or 1967-81 Camaro.

ED7562 RPM Air-Gap 2-R (non-EGR)

SUPER VICTOR BBC LARGE OVAL PORT

Designed to match Edelbrock/Musi heads (3500-8500 rpm) This new manifold for big-block Chevy is a variation of our Super Victor BBC manifold #2927 with a 3/4" radius in the ports, producing a port exit compatible with current large oval port heads such as the Edelbrock/Musi Victor 24° CNC head #61409. It shares the performance attributes of the original #2927, but can be ported to fit a wider variety of cylinder head shapes and locations, making it especially suitable for use with custom CNC ported heads on engines with high air flow requirements.

ED 29270 Super Victor Oval Port (with 3/4" radius filled-corner runners)

VICTOR 454-R & VICTOR 454-TD (3500-8000 rpm)
VICTOR 454-O (3000-7500 rpm)

The Victor 454 Series (R, TD and O) for big-blocks offer superior performance for drag racing and marine. Victor 454-R is for rectangular-port heads and 454-TD fits the same heads when a tall-deck block is used. Victor 454-O is for engines with large oval-port heads (1975 & earlier). They accept 4500 Series carbs or standard-flange double-pumpers with our adapter #8716. For maximum hp with 4500 Series carbs, use 1" spacer #8717. Victor 454-TD uses standard deck height distributor. #2907 and #2911 will fit Edelbrock Victor race heads #77609, #77659 and Victor Jr. #60409. Also available with fuel injector bosses, see Street & Competition EFI Manifolds.

ED2909 Victor 454-O
ED2911 Victor 454-TD

VICTOR JR. 454-R (3500-7500 rpm)
VICTOR JR. 454-O (3500-7500 rpm)

Designed for competition 396-502 big-block Chevys. #2902 fits rectangular-port heads and #2904 fits large oval-port heads (1975 & earlier). These intakes are designed to optimize the flow characteristics of an 850 cfm standard flange carb. Features include extended runner dividers, smaller plenum chambers and unique runner design for better 60 foot times and max power from 3000 to 7500 rpm. These manifolds are especially suited to 502 c.i.d. and smaller competition engines. Testing has proven these manifolds superior to our competitors. Victor Jr. 454-R #2902 will fit Edelbrock Victor race heads #77609, #77659, Victor Jr. #60409 and Victor 24° #77409, #77459. Victor EFI also available with electronic fuel injector bosses, see Street & Competition EFI Manifolds.

ED2902 Victor Jr. 454-R
ED2904 Victor Jr. 454-O

SUPER VICTOR BBC (3500-8500 rpm)

This single-plane manifold was designed for Chevy big-blocks with rectangular port cylinder heads. It is ideal for 500+ cubic-inches or any big-block drag race engine with high air flow requirements. Super Victor Tall-Deck #2916 can be used on tall-deck (10.2") blocks without manifold spacers and accepts standard length distributors. Also available with fuel injection bosses, see Chevrolet, Ford, and Pontiac Street & Competition EFI manifolds.

CHEVROLET 348/409 W-SERIES V8
PERFORMER RPM W-SERIES MANIFOLD FOR 348/409 CHEVY

These Performer RPM intake manifolds are designed to fit 1958-1965 Chevrolet 348/409 "W-Series" big-block engines. Two version are available; one for small-port cast iron heads and the other for factory large port or with our Performer RPM "W-Series" heads #60809 or #60819. They both deliver improved performance in the mid to high rpm range when combined with Edelbrock carburetor's. Both also feature a front mounted oil fill tube for those who want the nostalgic look of our Classic Series valve covers with no breathers. Tube (not installed) and matching push-in breather with PCV baffle cap included. For square-bore carburetor's only.

Performer RPM for Chevrolet 348/409
ED7159 "W-Series" Big-Block, Large Port

PERFORMER RPM DUAL-QUAD (1500-6500 rpm)

These new Performer RPM Dual-Quad intake manifolds are designed to fit 1958-1965 Chevrolet 348/409 "W" big-block engines. Two versions are available, one for small-port cast iron factory heads and one for factory large port or with our new Performer RPM W-series heads #60809 or #60819. These manifolds deliver performance improvements in the 1500-6500rpm range with Edelbrock Performer Series or Thunder Series AVS dual-quad carburetors, and they accept our dual-quad accessories including fuel lines, throttle linkage, and air cleaners. Includes Oil Fill Tube (not installed) and matching push-in Breather. The Oil Fill Tube and Breather are also available separately as ED4803. Both intakes have grommet-style PCV provision in back of manifold (baffle included).
ED5409 Performer RPM Dual-Quad Large Port (non-EGR)
ED54094 Performer RPM Dual-Quad Large Port with EnduraShine Finish (non-EGR)

FORD SMALL BLOCK

PERFORMER 289 (idle-5500 rpm) Ford 260-289-302 V8

Designed for street 260-289-302 c.i.d. Ford V8s without EGR. #2121 is stock replacement/street legal part for 289 and 302 V8s with OEM 4V carb.; 1966-72 (1973 non-CA); except stock equipped EGR. Will not fit Boss 302 or 255 c.i.d. V8s. Aftermarket 4-bbl carbs are not compatible with Ford Auto Overdrive Transmission (AOD) unless used with Lokar bracket SRK-4000. Available with standard finish, polished or EnduraShine finish for a look you've got to see to believe, see Optional Finishes.

ED2121 Performer 289 (non-EGR)
ED21213 Performer Black 289 (non-EGR)

PERFORMER RPM 302 (1500-6500 rpm)

Designed for street 289-302 c.i.d. Ford V8s. This dual-plane high rise manifold has excellent high rpm power while retaining throttle response. #7121 is stock replacement/street legal part for Shelby Mustangs with 289 c.i.d. V8 with OEM 4V carb.; 1965-66. No provisions for exhaust heated choke. Available with standard finish or polished. Aftermarket 4-bbl carbs are not compatible with Ford Auto Overdrive Transmission (AOD) unless used with Lokar bracket SRK-4000. Available with standard finish or polished, see Optional Finishes.
ED7121 Performer RPM 302 (non-EGR)
ED71213 Performer RPM 302 (non-EGR) BLACK

RPM AIR-GAP 302 (1500-6500 rpm)

The First Dual-Plane Manifold Design for High-Performance Street with our Proven, Race-Winning Air-Gap Feature. Designed for street 289-302 c.i.d. Ford V8s, the RPM Air-Gap incorporates the same race-winning technology that's been used on our Victor Series competition intakes for years. The Air-Gap design features an open air space that separates the runners from the hot engine oil resulting in a cooler, denser charge for more power. Includes nitrous bosses. No provision for exhaust heated chokes and no exhaust crossover. Edelbrock carbs will work with Ford automatic overdrive trans (AOD) when used with Lokar bracket SRK-4000
ED7521 RPM Air-Gap 302 (non-EGR)
ED75213 RPM Air-Gap NASCAR Edition (non-EGR)
ED75214 RPM Air-Gap 302 with EnduraShine finish (non-EGR)

F-28 DUAL-QUAD (1500-6500 rpm)

Designed for 289-302 c.i.d. Ford V8s. This manifold offers excellent performance as well as a hot looking package. With two Edelbrock carbs in-line, progressive throttle linkage and braided fuel line, this low-profile design allows adequate hood clearance and maintains great driveability. Chrome oval air cleaner #1235 or Elite oval air cleaner #4235 tops the package. Mounting bosses for throttle cable brackets make the F-28 suitable for late-model applications. Carb center to carb center is 6-7/16". Use Performer-Plus cam #2122 for low-end torque or Torker-Plus cam #5022 for top-end power.

ED5435 F-28 Manifold (non-EGR)
ED54351 Polished F-28 Manifold (non-EGR)

RPM AIR-GAP DUAL-QUAD (1500-6500 rpm)

Designed for 289-302 small-block Fords, these intakes are taller than the low-profile F-28 intake and offer performance improvements in the 1500-6500 rpm range. The large runners feature our unique Air-Gap design that separates the runners from the hot engine valley for a cooler, denser charge and more hp.
ED75354 RPM Air-Gap Dual-Quad manifold for S/B Ford 289-302 with EnduraShine finish (non-EGR)

PERFORMER RPM E-BOSS 302 (1500-6500 rpm)

With the new Performer RPM E-Boss 302 manifold #7129, you can build a mock Boss engine by using a standard 302 block and Edelbrock Performer RPM Cleveland cylinder heads. For high-performance street and competition, our dual-plane design makes outstanding power from 1500 to 6500 rpm. The Cleveland port layout and intake bolt hole pattern fit both 2V and 4V heads. Features include 8.2" deck height, Windsor end rails, water neck and distributor clearance plus front and rear water bosses. Match with an Edelbrock Performer or Thunder Series AVS carburetor.
ED7129 Performer RPM E-Boss 302 Ford manifold

TORKER II 302 (2500-6500 rpm)

Designed for street 289/302 c.i.d. Ford V8s. Will not fit Boss 302. Manifold not equipped with EGR. Will not fit 255 c.i.d. Ford V8 engines. Not for heavy vehicles. Aftermarket 4-bbl carbs are not compatible with Ford Auto Overdrive Transmission (AOD) unless used with Lokar bracket SRK-4000.

ED5021 Torker II 302 (non-EGR)

VICTOR JR. 302 (3500-8000 rpm)

Designed for Ford 289/302 competition engines using modified stock cast iron or aftermarket Windsor-style cylinder heads such as Edelbrock heads #60259, #77169 and #77219 or equivalent. The Victor Jr. #2921 has no rear water crossover. Port exit size at cylinder head is 1.90" x 1.08" with enough extra material to open it up to 2.10" x 1.25".

ED2921 Victor Jr. 302

SUPER VICTOR 8.2 (4500-9000 rpm)

Designed for high-rpm and competition 289/302 engines with aftermarket Windsor-style racing cylinder heads such as the Edelbrock Victor heads #77219 or Victor Jr. heads #77169, this new Super Victor 8.2 is for engines with an 8.2" deck height. Excellent for large displacement drag racing engines, this single-plane race manifold delivers big power gains from 4500 to 8500 rpm and includes nitrous and rear cooling water bosses. The square-bore carburetor pad stands .750" taller than the Edelbrock Victor Jr. #2921. Victor EFI also available, see Street & Competition EFI Manifolds.

ED2928 Super Victor 8.2

ED29285 Super Victor EFI for 8.2

SUPER VICTOR 8.7 (5000-9000 rpm)

Super Victor 8.7 is designed for high-rpm or competition Windsor Ford V8s with an 8.7" deck height SVO block. Ideal for use in drag racing applications operating between 5000 and 9000 rpm, the new Super Victor #2934 has an "extra tall line of sight" runner layout for maximum flow. Designed for square-bore carbs, this single-plane manifold includes nitrous, rear cooling and throttle linkage bosses. Average runner cross sectional area is 3.1 square inches and port openings are sized to match Fel Pro #1262 gaskets.

ED2934 Super Victor 8.7

FORD MUSTANG 5.0L EFI V8 VICTOR 5.0 (4000-7500 rpm)

Designed for 5.0L-based competition EFI engines, the Victor 5.0 EFI aluminium intake manifold is for non-emission, racing applications. Intended for engines modified to produce 400 to 540+ horsepower, this intake manifold features a race-proven design with shorter, larger runners for power to 7500 rpm. Runners are 11.5" long and 50% larger in area than Performer 5.0 #3821 runners. The base features an air-gap design to isolate the manifold from hot oil in the valley, and will accept stock or stock replacement fuel rails. The upper manifold will clear tall valve covers and large fuel pressure regulators. The upper and plenum cover are powder-coated light titanium gray. The base is as-cast and not powdercoated. Designed to work with Edelbrock cylinder heads, see Victor Jr. or Victor cylinder heads. Edelbrock 75mm throttle body is recommended for most applications with no EGR spacer. Larger injectors will be needed depending upon power levels. 1994-95 Mustangs require conversion to '87-93 inlet systems. Manifold includes throttle cable bracket.

ED2945 Victor 5.0

PERFORMER 5.0 RPM II (1500-6500 rpm)

The Performer 5.0 RPM II manifold for 1986-95 5.0L Mustangs has shown significant gains in horsepower over existing designs in the 1500 to 6500 rpm range, and is ideally suited for street and strip applications. This manifold consists of a V-shaped crossover with an increasing cross sectional area, which passes over to eight large tapered runners. The upper manifold is powder-coated light titanium gray. Our 70mm throttle body is recommended. 1994-95 Mustangs require Throttle Body Adapter #3835 and Adapter Kit #8025 (see Throttle Body Adapters), and Strut Tower Brace #5225. May not fit with stock hood of 1994-95 Mustangs, aftermarket hood recommended. 50-state street legal for 1986-95 Ford Mustangs with 5.0L V8.

ED7123 Performer RPM 5.0 II (complete, base and upper)

ED71233 Performer RPM 5.0 II with black powdercoated finish (EGR, complete, base and upper)

ED7233 Gasket set base and upper

PERFORMER 5.0 (idle-5500 rpm)

Designed for 1986-95 Ford Mustangs with 5.0L V8, the Performer 5.0 EFI aluminium intake manifold represents the standard for hot 5.0L performance. The modular design incorporates modern air flow technology and CAD programming for maximum power gains – up to 37 horsepower at 5500 rpm – with no loss of low speed torque. Stock replacement and 50-state street legal for 1986-95 5.0L engines, the features of the new Performer 5.0 EFI manifold include: broad power range from idle to 5500 rpm; removable plenum cover that allows access to runners for modification; and base manifold is CNC port matched to upper manifold for maximum performance. The upper and plenum cover are powder-coated light titanium gray. The base is as-cast and not powder-coated. Combining the new Performer 5.0 intake manifold with other Power Package parts gives you even more power across the entire rpm range. 1994-95 Mustangs require Throttle Body Adapter ED3835 and Strut Tower Brace ED5225.

ED3821 Performer 5.0 (EGR)

ED3820 Performer 5.0 Base Only

ED3832 Performer 5.0 Gasket Set (includes base-to-upper and plenum cover gaskets)

SPACER KITS FOR EDELBROCK 5.0L/5.8L INTAKE MANIFOLDS

These fibre laminate spacers for Edelbrock 5.0L/5.8L manifolds provide heat insulation between our upper and lower manifolds for a cooler charge and more power. They also raise the upper manifold 1/2" for increased valve cover clearance. Kits include everything you need for your 5.0L/5.8L.

ED8727 Kit for Edelbrock manifolds ED3821 & ED7126

ED7128 Kit for Edelbrock manifolds ED2945 & ED3887

ED8729 Kit for Edelbrock manifold

FORD 351 WINDSOR V8 PERFORMER 351-W (idle-5500 rpm)

Designed for street 351 c.i.d. Ford Windsor V8s. #2181 is stock replacement/street legal part for 351-W V8s with OEM carburetor; 1969-72 (1973 non-CA); except stock equipped EGR. Will not fit Boss 351. Aftermarket 4-bbl carbs are not compatible with Ford Auto Overdrive Transmission (AOD) unless used with Lokar bracket SRK-4000.

ED2181 Performer 351-W (non-EGR)

ED21813 Performer Black 351-W (non-EGR)

ED3783 Performer 351-W 4v (EGR)

PERFORMER RPM 351-W (1500-6500 rpm)

Designed for 1969 and later 351 Windsor Ford V8 high-performance engines with Edelbrock Performer RPM cylinder heads, modified OEM cylinder heads or equivalent. The dual-plane design offers good throttle response with excellent top-end power for the street. No provisions for choke or rear water crossover. Will fit 1964-1/2 to 1970 Mustangs. Will not fit under stock hood of 1974-78 or 1979-95 Mustangs. Aftermarket 4-bbl carbs are not compatible with Ford Auto Overdrive Transmission (AOD) unless used with Lokar bracket SRK-4000.

ED7181 Performer RPM 351-W (non-EGR)

RPM AIR-GAP 351-W (1500-6500 rpm)

Designed for street and high performance 351-400+ c.i.d. 351-W Ford V8s, the RPM Air-Gap incorporates the same race-winning design that's been used on our Victor Series competition intakes for years. The air-gap design features an open air space that separates the runners from the hot engine oil resulting in a cooler, denser charge for more power. Larger cross sectional area and a taller carb flange than #7181 for compatibility with large displacement, stroker 351-W based engines. Includes nitrous bosses. No provision for exhaust heated chokes and no exhaust crossover. Aftermarket 4-bbl carbs are not compatible with Ford Auto Overdrive Transmission (AOD) unless used with Lokar bracket SRK-4000.

ED7581 RPM Air-Gap 351-W

FORD 351 WINDSOR V8 TORKER II 351-W (2500-6500 rpm)

Designed for 1969 and later 351 Windsor Ford V8 high-performance engines with Edelbrock heads, OEM 12- or 16-bolt heads or equivalent. Will not fit "Boss 351" Cleveland. Manifold not equipped with EGR. Aftermarket 4-bbl carbs are not compatible with Ford Auto Overdrive Transmission (AOD) unless used with Lokar bracket SRK-4000.

ED5081 Torker II 351-W (non-EGR)

VICTOR JR. 351-W (3500-7500 rpm)

Designed for competition 351 Windsor Ford V8s from 1969 and later with the following heads: Edelbrock Performer RPM heads #60259, Victor Jr. heads #77169, Victor heads #77219 or similar heads. Two versions available: #2980 fits SVO blocks with a 9.20" deck height and #2981 fits standard 351-W blocks with a 9.50" deck height. Ideal for both oval track and drag racing engines operating between 3500 and 7500 rpm. Runners have a 2.70 square-inch cross sectional area.

ED2980 Victor Jr. 351-W (9.2" deck)

ED2981 Victor Jr. 351-W (9.5" deck)

SUPER VICTOR 9.2 (4500-8500 rpm)

Designed for high-rpm, large displacement and competition 351-Windsor Fords, the Super Victor 9.2 is for engines with an 9.2" deck height. Ideal for drag racing or oval track engines operating from 4500 to 8500 rpm, this single-plane intake is engineered for square-bore carbs and includes rear cooling and nitrous bosses. Runners have a 3.10 square-inch cross sectional area. Carb pad is .34" taller than Edelbrock Victor Jr. #2980. Match this race-winning manifold with Edelbrock heads #77219 or Victor Jr. heads #77169.

ED2929 Super Victor 9.2 (9.2" deck)

SUPER VICTOR 351-W (4500-8500 rpm)

Designed for high rpm or large displacement competition 351 Windsor Ford V8s with a deck height of 9.5" which are used in drag racing or oval track engines operating between 4500 and 8500 rpm. Super Victor #2924 can be used with ported factory cast iron heads, however aftermarket aluminium heads are recommended, such as Edelbrock Victor Jr. #77169 or Victor heads #77219 for ultra high-horsepower. Runners have a 3.20 square-inch cross sectional area. Also available with fuel injector bosses, see Street & Competition EFI Manifolds.

ED2924 Super Victor 351-W (9.5" deck)

ED29245 Super Victor EFI for 351-W (9.5" deck)

PERFORMER RPM E-BOSS 351 (1500-6500 rpm)

Build a mock Boss 351 engine with a standard 351W block and Edelbrock Performer RPM Cleveland heads #61699 using the new Performer RPM E-Boss 351 manifold #7183. Makes outstanding power from 1500 to 6500 rpm and the Cleveland port layout and intake bolt hole pattern fit both 2V and 4V heads. It features 9.5" deck height, Windsor end rails, water neck and distributor hole clearance, front and rear water bosses with a standard square bore carburetor pad. Edelbrock carbs will work with Ford automatic overdrive trans (AOD) when used with Lokar bracket SRK-4000.

ED7183 Performer RPM E-Boss 351 (non-EGR)

RPM AIR-GAP DUAL-QUAD 351W (1500-6500 rpm)

Designed for 351W small-block Fords, these intakes are taller than the low-profile F-28 intake and offer performance improvements in the 1500-6500 rpm range. The large runners feature our unique Air-Gap design that separates the runners from the hot engine valley for a cooler, denser charge and more hp. Also available as a complete manifold and carb kit.

ED7585 RPM Air-Gap Dual-Quad (non-EGR)

GLIDDEN VICTOR 351W (5000-9000 rpm)

Developed in conjunction with Billy Glidden, this manifold features a 4500 series carb pad, it is intended for high rpm and large displacement Windsor headed small-block Fords with a 9.5" deck height. The runner area has been enlarged to 3.6 square inches and the plenum has been increased to produce more high rpm power. The front water cross-over has been eliminated, but water fittings have been provided on the intake flange for external plumbing of a thermostat if desired. The carburetor pad height on this new manifold is only 0.250" taller than the 2924, making it ideal for single-carb all-out drag racing vehicles.

ED2828 Glidden Victor 351W for 4500 series carb (9.5" deck)

VICTOR 351-Y FOR 4500 SERIES (5000-8500+ rpm)

Designed in conjunction with noted Ford drag racer Billy Glidden for raised port aluminium C3 SVO (Yates) cylinder heads, ED2863 fits 9.2" deck heights. ED2865 is for 9.2" S/B Fords with Yates SC-1 heads. Victor Glidden 351-Y #2863 has 3.2 square-inch runners. #2865 has 4.0 square-inch runners and is intended for 400 cubic-inch and larger high output drag race engines. Both are perfect for all-out nitrous-assisted drag race applications. Carb mount flange and plenum are machined for 4500 Series carbs and require port matching and blending prior to use.

ED2863 Victor 351-Y for 9.2" with C3 heads and 4500 Series carb
ED2865 Victor 351-Y for 9.2" with SC-1 heads and 4500 Series carb
ED2864 Spacer Plate & Bolt Kit for #2865 on 9.5" deck

Ford 429/460 V8 RPM AIR-GAP 460 (1500-6500 rpm)

Designed for street and high performance 429-460+ c.i.d. Ford V8s with standard or Cobra Jet heads, the RPM Air-Gap 460 incorporates the same race-winning design that's been used on our Victor Series competition intakes for years. The air-gap design features an open air space that separates the runners from the hot engine oil resulting in a cooler, denser charge for more power. It also features a larger cross sectional area (3.3 square inches) and a taller carb flange than Performer RPM 460 manifold #7166 for even more power in high performance and large displacement engines. The carb mount flange accepts both square-bore and spread-bore carbs for Cobra Jet applications. Will not fit 1988 and later models. Note: Early Cobra-Jets came with Quadrajets.

ED7566 RPM Air-Gap 460

Ford 429/460 V8 TORKER II 460 (2500-6500 rpm)

Designed for 429/460 c.i.d. Ford V8s used in marine and high performance applications. Manifold not equipped with EGR. Will fit 429 Cobra-Jets. Manifold will not accept stock Motorcraft spread-bore carburetor. Will not fit 1988 and later models.

ED5066 Torker II 460 (non-EGR)

Ford 429/460 V8 VICTOR 460 (3500-8000 rpm)

Designed for Ford 429/460 competition engines using Cobra-Jet cast iron, SVO Cobra-Jet aluminum (M-6049-A429), or the Edelbrock 460 CJ aluminum heads. Both manifolds are ideal for drag racing (Super Stock, Super Gas, Super Comp, Brackets, etc.), marine or any application requiring maximum power up to 8000 rpm. Standard 429/460 cast iron heads will require port matching of the head to fit manifold. Our 1" Cloverleaf Spacer #8718 provides maximum performance with #2965 where hood clearance is not a problem. Port exit size at head is 2.16" x 1.88" with enough extra material to open it up to the cast iron Cobra-Jet heads. Will not fit late-model production heads (1988 & later).

ED2966 Victor 460 (for 850 cfm carburetors)
ED2965 Victor 460 (for 4500 Series carburetors)
ED8718 Cloverleaf 1" Spacer (for maximum performance with #2965)

Ford 351-M/400 V8 PERFORMER 400 EGR (idle-5500 rpm)

Designed for 351-M/400 Fords in one of the three following configurations: 1) OEM 2V carb and EGR system with supplied 2V EGR spacer; 2) 4V EGR system with either an Edelbrock #8053 4V EGR spacer, or an Edelbrock #8017 and Ford #E42Z9A-589E 4V EGR spacer; 3) For off-highway use, non-EGR 4V system with an Edelbrock #8714 adapter. Performer 400 EGR manifold #3771 is a stock replacement/street legal part for 351-M/400 2V V8s; 1974-80.

ED3771 Performer 400 EGR (2V or 4V carburetor)

PERFORMER 400 NON-EGR (idle-5500 rpm)

Designed for 400 c.i.d. Ford V8s produced from 1971 to 1982 with 2V Cleveland heads and 351-M V8s produced from 1975 to 1982. Will not fit 1974 and earlier 351-C V8s. Valley width measures 8-17/32".

ED2171 Performer 400 (non-EGR)
ED21713 Performer Black 400 (non-EGR)

Ford 351 CLEVELAND V8 PERFORMER 351-4V & 351-2V (idle-5500 rpm)

Performer 351-4V is designed for street 351-C and Boss 351 Fords that came stock with 4V carb and heads. Performer 351-2V is designed for street 351-C and accepts 4V carb, however it's designed to improve the performance of engines that came stock with 2V carb and heads. Neither manifold will fit Boss 302 or accept stock Motorcraft spread-bore carb. Valley width measures 6-31/32".

ED2665 Performer 351-4V (non-EGR)
ED2750 Performer 351-2V (non-EGR)

FORD BIG BLOCK

Ford 332-428 V8 PERFORMER 390 (idle-5500 rpm)

Designed for street 332-352-360-390-406-410-427-428 c.i.d. Ford V8s with medium- or low-rise cylinder heads. #2105 is stock replacement/street legal part for 332, 352, 360, 390, 406, 410, 427 and 428 V8s with OEM 4V carb., 1966-72 (1973 non-CA); except stock equipped EGR. Manifold not equipped with EGR; will not accept stock Motorcraft spread-bore carburetor or fit heavy-duty 361 c.i.d. and 391 c.i.d. Ford truck V8s.

ED2105 Performer 390 (non-EGR)
ED21053 Performer 390 Black (non-EGR)

Ford 332-428 V8 PERFORMER RPM FE (1500-6500 rpm)

Designed for high-performance street 390-406-410-427-428 c.i.d. Ford FE V8s with standard 390-428 c.i.d., 427 low/medium-rise or Edelbrock Performer RPM FE heads. The dual-plane constant cross-sectional area design builds low and mid-range acceleration while optimized runner paths make exceptional top-end hp. Has provision for adding the PCV or breather flange at rear. No exhaust crossover passage.

ED7105 Performer RPM FE (non-EGR)

Ford 332-428 V8 VICTOR FE (4000-8000 rpm)

Designed for high performance 390-406-410-427-428 c.i.d. Ford FE engines. The singleplane design provides race-winning power for many types of competition. Carb flange height is equal to the Ford high-riser manifold EDC4AE-9424-G to fit under 427 Cobra heads. Runners have plenty of material for port matching to low- or medium-riser style heads. Machined rear breather boss is included with an unmachined nitrous bosses and front oil fill tube boss. Will not fit 427 high-riser and tunnel-port heads. Match with our FE heads.

ED2936 Victor FE (for Square-Bore Carbs)
ED2937 Victor FE (for 4500 Series Carbs)
ED29375 Victor FE EFI (for 4500 Series Carbs)

RPM AIR-GAP 351-C (1500-6500 rpm)

The RPM Air-Gap 351 Cleveland manifold features an open space that separates the runners from the hot engine oil resulting in a cooler, denser charge. The RPM Air-Gap manifold for 351 Cleveland engines is designed to complement Edelbrock's new 351-C Performer RPM cylinder heads, and also works well with 2V cast iron Cleveland heads.

ED7564 RPM Air-Gap 351-C
ED75641 RPM Air-Gap 351-C Polished
ED75644 RPM Air-Gap 351-C Endurashine

TORKER 351 (3000-7000 rpm)

Designed for street 351 c.i.d. Ford V8s with 4V Cleveland or Boss 351 heads. Will not fit under hood of Ford Pantera with stock air cleaner. Will not fit 351 with 2V heads.

ED2760 Torker 351 (non-EGR)

S/B Ford V8 COMPETITION MANIFOLDS

VICTOR 351-Y (5500-9000 rpm)

Designed for raised port aluminium C3 SVO (Yates) cylinder heads used on SVO Ford engines with low-block deck height (9.200"). Victor 351Y-2 #2938 is for Ford engines used in the NASCAR Nextel Cup, Busch, and Craftsman Truck Series. Lighter than previous manifolds for these applications, it produces more high rpm horsepower in non-restricted applications. #2961 has 3.2 square-inch runners for those who require larger runners. Intake flange machining is required for higher compression engines and slotted both holes are provided for ease of installation. Both #2938 and #2961 are NASCAR approved for the 2005 race season. #2961 and #2938 are spider-only type manifolds which require a separate lifter valley cover made by R.D.I., phone number (704) 892-8688. No waterneck provisions in manifold.

ED2991 Victor 351-Y

Ford 429/460 V8 PERFORMER RPM 460 (1500-6500 rpm)

Designed for high-performance street 429-460 Ford V8s with standard or Cobra-Jet cylinder heads. Latest technology in dual-plane design results in excellent low- and mid-range torque and outstanding horsepower on appropriately equipped engines. Will accept square-bore or spread-bore carburetors. Will not fit 1988 and later models. Note: Early Cobra-Jets came with Quadrajets.

ED7166 Performer RPM 460 (non-EGR)

FORD FLAT HEAD MANIFOLDS

1949-53 Ford/Mercury Flathead V8 FORD FLATHEAD 4-BARREL MANIFOLDS

These manifolds allow the use of square-bore carbs such as Edelbrock Performer Series 500 cfm carb ED1403 or ED1404 on the Ford Flathead engine. They are reproductions of the vintage Edelbrock ED452 two-piece manifold with a new carb adapter flange designed for modern 4-barrel carburetors.

ED1107 Ford Flathead 4-Barrel Manifold for 1949-53 V8

RPM AIR-GAP DUAL-QUAD MANIFOLD FOR BIG-BLOCK FE FORD

Give your FE powered street rod dual-quad power and nostalgic looks with the new Edelbrock RPM Air-Gap Dual-Quad intake manifold. Designed for 1960-later high-performance street 390-406-410-427-428 c.i.d. Ford FE engines with low/medium rise or Edelbrock Performer RPM FE heads #60059 or #60069. The manifold carb pad is set up to fit Edelbrock carburetors only, will not work with other square flange carburetors. In Dyno tests on a 390 with Performer RPM heads #60069, Performer RPM camshaft #7106 and Thunder Series AVS carburetor #1804, it made 421 hp and 428 ft./lbs. torque. Will not fit 427 Ford Hi-riser and Tunnel port engines. Has provision for a breather flange at rear. Match with Edelbrock gasket #7224 for the perfect seal.

RPM Air-Gap Dual-Quad Manifold for Big-Block FE Ford. **ED7505**

FLATHEAD TRIPLE DEUCE MANIFOLD FOR 1949-53 FORD FLATHEAD

This vintage Flathead Ford intake manifold invokes images of highly modified deuce coupes running flat-out on both the salt flats of Bonneville and the bustling streets of southern California. Designed to be matched with three two-barrel carburetors, this manifold is compatible with the Stromberg, Holley and Demon three-bolt carbs, to complete the nostalgic look. This manifold uses the late model flathead design with front mounted oil fill and road draft provisions and can also be adapted to work with the 1938-48 Flathead engines.

ED1109 1949-53 Ford Flathead Triple Deuce Manifold

FLATHEAD SLINGSHOT MANIFOLD FOR 1938-48 FORD FLATHEAD

The original Slingshot manifold was the first product ever offered by Vic Edelbrock Sr. and marked a milestone in the beginnings of the automotive aftermarket industry. Edelbrock has decided to re-release this legendary manifold, giving a new generation a chance to own this historic benchmark. Using a pair of two barrel carburetors mounted in a "Y" configuration, this manifold unlocked the potential of Ford's versatile flathead platform for thousands of enthusiasts across the country. The Slingshot manifold is designed for use with 1938-48 style Flatheads, some late model blocks can be modified to work with these heads. It works with standard three bolt Stromberg, Holley and Demon carburetors and allows for the use of a period correct generator mounted in the stock location.

ED1103 Flathead Slingshot Manifold

CHRYSLER SMALL BLOCK

Chrysler 318/360 V8 PERFORMER 318/360 (idle-5500 rpm)

Designed for street 318-340-360 c.i.d. Chrysler V8s. #2176 is stock replacement/street legal part for above V8s with OEM 4-bbl. carb.;

1966-72 (1973 non-CA); except stock equipped EGR. #3776 is stock replacement/street legal part for same V8s with OEM 4-bbl. carb.; 1972-87. These manifolds are not for use on marine engines used in salt water. Will not fit 1992 and later Magnum engines.

ED2176 Performer 318/360 (non-EGR)
ED37763 Performer Black 318/360 (EGR)

Chrysler 318/360 V8 PERFORMER RPM 340/360 (1500-6500 rpm)

Designed for 340-360 c.i.d. Chrysler V8s and 318 c.i.d. engines with 340-360 cylinder heads. Latest technology in dual-plane design results in both excellent low-rpm torque and outstanding high-rpm horsepower. Recommended for high-performance street, strip and fresh water marine applications. Accepts early-style waterneck only. Will not accept stock Thermo-Quad carburetor. Will not fit 1992 and later Magnum engines.

ED7176 Performer RPM 360 (non-EGR)

Chrysler 318/360 V8 TORKER II 340/360 (2500-6500 rpm)
Designed for high performance street 340-360 c.i.d. Chrysler V8s. Manifold not equipped with EGR. Can be used on 318 c.i.d. if 340-360 c.i.d. cylinder heads are used. Not for heavy vehicles. Will not fit 1992 and later Magnum engines.

ED5076 Torker II 340/360 (non-EGR)

Chrysler 318/360 V8 RPM AIR-GAP 340/360 (1500-6500 rpm)

Designed for 340-360 c.i.d. Chrysler V8s and 318 c.i.d. engines with 340-360 cylinder heads. The air-gap design features an open air space that separates the runners from the hot engine oil resulting in a cooler, denser charge for more power. Accepts early-style waterneck only. Will not accept stock Thermo-Quad carburetor. Will not fit 1992 and later Magnum engines. Includes nitrous bosses. No provision for exhaust heated chokes and no exhaust crossover.

ED7576 RPM Air-Gap 340/360 (non-EGR)
ED75763 RPM Air-Gap 340/360 BLACK

Chrysler Magnum 5.2L & 5.9L V8 RPM AIR-GAP MAGNUM (1500-6500 rpm)

Designed for 1992 & later 5.2L (318 c.i.d.) and 1993 & later 5.9L (360 c.i.d.) Chrysler Magnum V8s, the RPM Air-Gap manifold allows the use of a carburetor on these originally fuel-injected engines for use in early muscle cars and street rods. This dual-plane manifold design incorporates the same race-winning Air-Gap technology that's been used on our Victor Series competition intakes for years for outstanding performance in the 1500 to 6500 rpm range. The Air-Gap design features an open air space that separates the runners from the hot engine oil resulting in a cooler, denser charge for more power. Match with Performer RPM cylinder heads for maximum performance.

ED7577 RPM Air-Gap Magnum (non-EGR)

Chrysler 318/360 V8 VICTOR 340 (3500-8000 rpm)

Victor 340 is designed for 340-360 c.i.d. Chryslers using standard rectangular-port heads. For oval track and drag race engines operating from 3500-8000 rpm. Can be used on 318 c.i.d. engines with 340-360 heads. Will not fit 1992 and later Magnum engines.

ED2915 Victor 340 (non-EGR)

Chrysler 318/360 V8 VICTOR W-2 (3500-8000 rpm)

Designed for 340-360 c.i.d. Chrysler V8 engines using the Chrysler W-2 oval-port cylinder heads (Chrysler #P4120664). For oval track and drag race engines operating in the 3500 to 8000 rpm range. Can be used on 318 c.i.d. engines if W-2 oval-port cylinder heads are used.

ED2920 Victor W-2 (non-EGR)

SUPER VICTOR S/B CHRYSLER (3500-8000 rpm)

Designed for small-block Chrysler engines with conventional rectangular port heads like Edelbrock Performer RPM cylinder heads, this single-plane Air-Gap style manifold operates from 3500 to 8000 rpm. Testing has shown substantial mid range gains over the current designs. The runners have been cast in such a way to insure enough metal thickness to allow for gasket matching and porting. Accepts 1975 and earlier waterneck only. Also available with electronic fuel injector bosses.

ED2815 Super Victor Small-Block Chrysler (non-EGR)
ED28155 Super Victor Small-Block Chrysler EFI (non-EGR)

CHRYSLER BIG BLOCK

Chrysler 361-400 V8 PERFORMER 383 (idle-5500 rpm)

Designed for street 361-383-400 c.i.d. Chrysler V8s that measure 7.75" across block. For EGR, #2186 is stock replacement/street legal part for 400 V8s with OEM 4-bbl. carb.; 1972-78. For non-EGR, #2186 is stock replacement/street legal part for 361-383-400 V8s with OEM 4-bbl. carb.; 1966-72 (1973 non-CA); except stock equipped EGR. May be used with OEM or aftermarket carbs.

ED2186 Performer 383 (EGR/non-EGR)

Chrysler 413-440 V8 PERFORMER 440 (idle-5500 rpm)

Designed for street 413-426-440 c.i.d. Chrysler V8s that measure 8.75" across block. For EGR, #2191 is stock replacement/street legal part for 440 V8s with OEM 4-bbl. carb.; 1972-79. For non-EGR, #2191 is stock replacement/street legal part for 413, 426 (Wedge), 440 V8s with OEM 4-bbl. carb.; 1966-72 (1973 non-CA); except stock equipped EGR. Will not fit 1962-64 Max Wedge heads.

ED2191 Performer 440 (EGR/non-EGR)

Chrysler 361-400 V8 PERFORMER RPM 383 (1500-6500 rpm)

Designed for 361-383-400 c.i.d. Chryslers. Dual-plane design results in excellent low-end torque and high-rpm power. High flow runner design will handle the popular stroker combinations. For high-performance street/strip applications. Will not fit 1962-64 Max Wedge heads.

ED7186 Performer RPM 383 (non-EGR)

Chrysler 413-440 V8 PERFORMER RPM 440 (1500-6500 rpm)

Designed for 413-426-440 c.i.d. Chrysler V8s. Dual-plane design results in excellent low-rpm torque and outstanding high-rpm hp. For high-performance street/strip applications. Will not fit 1962-64 Max Wedge heads.

ED7193 Performer RPM 440 (non-EGR)

Chrysler 413-440 V8 CH-6B CHRYSLER 6-PACK (2500-6500 rpm)

Designed for 440 c.i.d. Chrysler engines with 3x2-bbl. carbs, also fits 413 and 426 Wedge. #2475 is stock replacement/street legal part for 440 V8s with OEM 3x2-bbl. carbs; 1968-71. This manifold was original equipment on Chrysler 440 Six-Pack engines, Chrysler #P04529056. Will not fit 1962-64 Max Wedge heads.

ED2475 CH-6B (non-EGR)

Chrysler 361-400 V8 TORKER 383 (2500-6500 rpm)

Designed for 361-383-400 Chrysler V8s that measure 7.75" across block. Great for street high-performance engines operating between 2500 and 6500 rpm where low-end torque is not a requirement.

ED3010 Torker 383 (non-EGR)

Chrysler 413-440 V8 TORKER II 440 (2500-6500 rpm)

Designed for street 413-426-440 c.i.d. Chrysler V8s. They measure 8.75" across block. Manifold not equipped with EGR. Will not fit 1962-64 Max Wedge heads.

ED5091 Torker II 440 (non-EGR)

Chrysler 413-440 V8 VICTOR 440 (3500-7500 rpm)

For competition and high-rpm 413-426-440 c.i.d. Chrysler V8s, the Victor 440 has an all-new runner design that delivers maximum power from 3500 to 7500 rpm. This single-plane intake manifold includes nitrous bosses and is designed for square-bore carburetors. Dual carburetor bolt hole patterns are provided for both standard and Thermo-Quad carbs, with sufficient carburetor pad material for conversion to a Thermo-Quad carburetor for Super Stock applications. Match this race-winning manifold with Edelbrock Performer RPM Chrysler 440 aluminum cylinder heads #60189 or #60929 for maximum performance. Will not fit 1962-64 Max Wedge heads.

ED2954 Victor 440 (non-EGR)
ED29545 Victor 440 EFI (non-EGR)

PERFORMER RPM OLDS 350 (1500-6500 rpm)

Designed for 330-350-403 c.i.d. Oldsmobiles and 1980-1/2 to 1985 307 c.i.d. engines with 5A heads (casting #3317). The Performer RPM Olds manifold is a high-rise, dual-plane design with 180° firing order engineered for maximum top-end horsepower while maintaining throttle response. Port flange has extra material above the runner for use with cast iron 455 heads and Edelbrock Performer RPM heads #60519. Has clearance for HEI distributor. Carb pad accepts square-bore carbs without adapters.

ED7111 Performer RPM Olds 350 (non-EGR)

OLDSMOBILE 400-455 V8

PERFORMER OLDS 455 (idle-5500 rpm)

Designed for street 400-425-455 c.i.d. Oldsmobiles. Ideal for cars, 4x4s, tow vehicles, RVs and boats. Includes exhaust crossover plugs #2733 which must be used for marine and off-road use.

ED2151 Performer Olds 455 (non-EGR)

PONTIAC 326-455 V8
PERFORMER PONTIAC (idle-5500 rpm)

Designed for 1965-79 Pontiac 326-455 c.i.d. V8s (except Ram Air V and 265/301 V8s). Provides great throttle response for performance you can feel. #2156 is stock replacement/street legal part for 326, 350, 389, 400 and 455 V8s with OEM 4-bbl. carb.; 1966-72 (1973 non-CA); except stock equipped EGR. #3756 is stock replacement/street legal part for 326, 350, 389, 400 and 455 V8s with OEM 4-bbl. carb.; 1973-79 with EGR.

ED2156 Performer Pontiac (non-EGR)
ED3756 Performer Pontiac (EGR)

PERFORMER RPM PONTIAC (1500-6500 rpm)

Designed for 1965-79 street 326-455 c.i.d. Pontiac V8s (except Ram Air V). Will not fit 265/301 V8s. Provides maximum high-rpm power while maintaining good throttle response for street. Recommended for high-performance street, strip and marine. Has clearance for HEI distributor. Will not fit under Trans Am Shaker hood without modifications.

ED7156 Performer RPM Pontiac (non-EGR)
ED37561 Performer Polished Pontiac (EGR)

PONTIAC P-65 DUAL-QUAD (idle-5500 rpm)

Designed for 1965-79 street 326-455 c.i.d. Pontiac V8s (except Ram Air V), this manifold is a direct reproduction of the original Edelbrock Pontiac P-65 manifold delivering classic Edelbrock performance from off-idle to 5500 rpm. Bosses at the rear of the manifold accommodate brake booster, accessory bracket and throttle linkage. The flanges match the ports on the Edelbrock Performer RPM Pontiac heads for proven performance. Use with Performer-Plus cam #2157 for low-end torque or Torker-Plus cam #5057 for top-end power. Not for HEI distributors. Carb center to carb center: 6-7/16".

ED8088 Dual-Quad Braided Fuel Line Kit
ED7094 Dual-Quad Progressive Throttle Linkage Kit

VICTOR PONTIAC (3500-7500 rpm)

Two versions of the Victor Pontiac are available for 389-455 competition engines. #2957 accepts standard flange carburetors and #2956 is for 4500 Series carbs. Both manifolds are ideal for drag racing marine or any application requiring. Compatible with standard Pontiac cast iron heads, or use with Edelbrock Performer RPM Pontiac aluminum heads for maximum power. Port exit size at head is 2.10" x 1.08" with enough material to open it up to larger port openings. Victor EFI also available with electronic fuel injector bosses.

ED8718 Cloverleaf 1" Spacer (for maximum performance with #2956)

HOLDEN 253-308
Performer 253-308 (idle-5500 rpm)

For street 253-308 Holden V8s. Patented runner design with 180deg. firing order greatly improves torque over a range from idle to 5500 RPM. Fits Red/Blue/Black Motors. May have to drill out centre bolt holes depending on application.

ED2194 Performer 253-308 (non-EGR)
ED21944 Performer Endura Shine 253-308 (non-EGR)

Torker 253-308 (2500-6500 rpm)

Recommended for street high performance up to HQ with pre-pollution heads, and race vehicles only. Fits Red motor Cylinder Heads only, will NOT fit on Blue/Black motor heads. Single plane design utilising modern air flow technology. Provides good low RPM response plus increasing performance above 5000 RPM range

ED2790 Performer 253-308 (non-EGR)

HOLDEN V8 VN-VT
VICTOR JR INTAKE

MANIFOLD

(3500-7500 RPM)
The Edelbrock Victor Jr. Holden is for use with competition 355+ c.i.d. Holden V8 engines that utilize the 1988-98 Holden VN cylinder heads.

The Victor Jr. Holden is a single-plane design that is tuned for maximum air flow from 3500 to 7500 rpm. It features a taller design with long tapered runners for a broad operating rpm range. Will fit both stock 1988-1998 EFI style cylinder heads and the Edelbrock Holden VN RPM cylinder heads. It also features a 4150 flange for use with square-bore carburetors and throttle bodies. Includes extra material for porters to modify for use with 4500 series applications. The water outlet is machined for use with a small-block Chevy waterneck.

ED2894 Holden V8 VN-VT Heads, Non EFI
ED28945 Holden V8 VN-VT Heads, With EFI

Holden VN-VT V8 Manifold
RPM AIR-GAP (1500-6500 RPM)

Designed for street and high performance 304-308-355-383 c.i.d. Holden V8 engines that utilize the 1988-98 Holden VN-VT cylinder heads. This RPM Air-Gap manifold is a dual-plane design that is tuned for excellent throttle response from 1500 to 6500 rpm. This manifold has been designed to fit both stock 1988-1998 EFI style heads and the Edelbrock Holden VN-VT Performer RPM cylinder heads.

ED75945 RPM Air Gap 304-383 With EFI
ED7594 RPM Air Gap 304-383 Non EFI
ED3504 Fuel Rail Kit for #ED75945 (Anodized Black Finish)

ROVER 3500cc V8
Performer Rover (idle-5500 rpm)

Designed for Rover 3500cc V8s (1968 and later). Manifold also fits 1961-63 Buick and Oldsmobile aluminium 215 c.i.d. V8s. Will not work with stock Stromberg carburetors.

ED2198 Performer Rover (non-EGR)

CHEVROLET
SMALL BLOCK

STEALTH

The Weiland "Stealth" features a High rise, dual plane design for maximum torque & horsepower from stout street/strip engines. It is fully CNC machined for a perfect fit and is available in your choice of satin, polished or the new "Everbright" high lustre coating.

- 1500-6700 RPM power band
- High rise, dual plane design
- Square flange carburettor mounting
- 4.19" Tall at Front
- Fits Chev Small Block Pre-1987

CHEV & HOLDEN LS1 & LS6

AIR-RAM

The Weiland Air Ram intake manifold was developed in conjunction with the late John Lingenfelter and was the first aluminum intake on the market for the LS series of motors. The unique cast aluminum construction of the manifold makes it ideally suited for use with blower and turbo applications and provides the necessary material for custom nitrous system installations. Manifolds are available in satin, polished or Everbright coated.

- Fits LS-1 and LS-6 cylinder heads
- Produces gains of up to 25hp over stock plastic intakes
- Fully CNC machined for a perfect fit
- Comes with provisions for EGR (block-off plate is available)
- Utilizes stock fuel rails, crossover lines and throttle body

HI-RISE

The Weiland Hi Rise is a single plane, dual 4 barrel manifold for the early Hemi 331, 354 & 392 Hemi engines.

- This manifold requires OE style or Edelbrock carburetors as the 7.5" carb centerline is so small to fit Holley carbs. Does not fit 426 Hemi engines.
- Single plane design • 2000-6800 RPM power band
 - Square flange carburettor mounting • 3.00" Tall at Front
 - Fits Chrysler Hemi 331, 354 & 392

Description

FORD 289-302 WINDSOR

ACTION PLUS

The Weiland Action Plus features a low profile dual plane design that builds maximum torque for street performance engines. It is fully CNC machined for a perfect fit and is available in your choice of satin, polished or the new "Everbright" high lustre coating.

- Low rise, dual plane design
- Idle-5500 RPM power band
- Square flange carburettor mounting • 3.82" Tall at Front
- Exhaust crossover for improved street drivability
- Fits Ford 289-302 Windsor

MANIFOLD SPACERS

INTAKE MANIFOLD SPACER PLATES

These precision machined aluminium spacers mount between the intake manifold and cylinder head and allow you to bolt on conventional, short deck intake manifolds on GM's Chevy tall deck truck blocks, or any Big Block Chevy-style aftermarket block which is .400" taller than stock.

Intake Manifold Spacers, Fits Tall Deck BBC MO65090

EFI Manifold Spacers

Ford 5.0L EFI manifold spacers fit between the upper and lower manifolds for extra clearance with aftermarket valve covers and to help dissipate heat and significantly increase performance. CNC machined in the USA from phenolic material. Includes longer bolts.

BIG BLOCK CHEVY MANIFOLD SPACER KITS

These intake manifold spacer kits allow the use of any high performance big block Chevrolet manifold on late model Chevrolet "tall deck" truck engines. This spacer fits in the gap created by the taller deck height of the truck blocks. NOTE: Due to the increased manifold height, use of an aftermarket distributor is necessary. Spacer plates are .375" thick.

GM LS SERIES INTAKE ADAPTERS

Aeroflow Performance billet 6061 aluminium intake adapters allow the end user to choose adapt-ers to suit either cathedral or rectangle port cylinder heads. One adapter allows you to bolt up any cathedral port intake or supercharger to your rectangle port heads. The other allows you to bolt up any rectangle port intake or supercharger to your cathedral port heads. This means you can simply adapt an LSA blower or late model manifold to your early heads. Kit comes complete O-Rings for a sure seal. If bolting up an LSA intake you require M6x1 x 70mm UHL bolts. When run-ning a car intake manifold you require M6 x 130mm UHL bolts and when running a truck intake manifold you require M6 x 90mm UHL length bolts. Adapters are 12.7mm (1/2") thick.

VALVE COVERS

Edelbrock

VICTOR SERIES VALVE COVERS

WITH BLACK POWDER COAT TEXTURE FINISH

Our Victor Series valve covers have a black powder coated finish that features a finely textured surface for a pleasing and unique appearance. This is the same finish you'll find on our top-of-the-line Edelbrock/Musi 555 Crate Engine. These valve covers are manufactured from die-cast aluminum and machined with 1-1/4" breather hole. Overall height is measured from base to top at the highest point.

Application	Overall Height	Part #
1959-86 Chevy 262-400 - (low)	2.50"	ED41713
1959-86 Chevy 262-400 - (tall)	3.75"	ED41733

Ford 289/302/351W (except Boss) - (tall)	3.88"	ED41263

SIGNATURE SERIES VALVE COVERS

WITH BLACK POWDERCOATED FINISH

Dress your engine up with our new Signature Series Black powder coated finish, valve covers and breather for a distinctive modern look. These accessories are stamped from 18-gauge steel and feature a subtle textured black powder coated finish with a screen printed Edelbrock logo for great looks from the name you can count on - Edelbrock! Designed for function, these valve covers have stock style breather baffles that prevent oil passage to the PCV valve. These quality valve covers accept all emissions equipment, including PCV valve. Rubber grommets for the breather and PCV valve holes included. Matching breather sold separately.

Pontiac 301-455 V8 1962-79 (no baffle)	3.00"	ED4453

ELITE II SERIES VALVE COVERS

Introducing the next generation of Elite Series accessories... Elite II. This new line of accessories features a design that is influenced by the original Elite Series originally released in 1985, but with a new modern take on this classic look. They're made from heavy-gauge, die-cast aluminum and are finished off with a show quality high luster polished finish. The raised fins are accented by a contrast gloss black finish between the fins for the definitive Elite Series look.

Our tall profile valve covers are 2" taller than stock, and clear most roller rockers and valve train components. Our low profile valve covers clear all air-conditioning, alternator brackets and aluminium rockers. Overall height is measured from gasket flange to top at the highest point. Elite II Series Valve Covers are available in Polished Finish ONLY!

Description	Height	Part No.
CHEV		
Chevy 262-400 V8 1959-86, Low Profile (B)	2.93"	ED4262

Ford 289/302/351W (except Boss) Tall Profile (A,C)	3.70"	ED4264

(A) Some tall profile valve covers will interfere with A/C compressors, EGR valves and power brake boosters.

(B) Will not fit '86 & later Vette aluminium heads or 1987 & later Chevy cast iron heads. See centerbolt valve covers.

(C) Will not fit '86 & 5.0L engines with stock or Edelbrock #3821, #7123 or #7126 EFI Manifolds.

CLASSIC SERIES VALVE COVERS WITH POLISHED FINISH

Edelbrock first made these aluminium valve covers in the late '50s and they're still a classic. Made of heavy-gauge, sand-cast aluminium, they have enough height to clear roller rockers. Breathers #4201 or #4211 can be added, if desired. The figure in parentheses is the height of the cover from base to top at the highest point. Polished finish.

Edelbrock Coil-Covers for GM LS1 Engines

Edelbrock's LS Series Coil Covers are a great way to dress up the LS1 in your Corvette, F-Body, street rod or muscle car. Their exclusive design is manufactured of cast aluminium and eliminates the stock mounting bracket by mounting the coils directly to the underside of cover, providing a clean, custom look. These Coil Covers are a center bolt style design and will fit 1999 and later LS1/LS6 centerbolt valve covers with GM coils #12558948 or aftermarket replacement equivalent.

Coil-Covers as-cast aluminium	ED4118

CLASSIC SERIES 409 CHEVY VALVE COVERS WITH POLISHED OR BLACK FINISH

We've added the 348/409 W-series Chevy engine to our list of applications for our popular line of classic aluminium valve covers. Of course they're made of heavy-gauge, sand-cast aluminium with enough height to clear roller rockers.

Classic Series Valve Covers for 348/409 W-series Chevy, Polished	ED4140
Classic Series Valve Covers for 348/409 W-series Chevy, Black	ED41403

EDELBRÖCK CAST ALUMINUM CLEVELAND VALVE COVERS

Designed especially for the Glidden Victor SC-1 cylinder head, this heavy-duty sand cast aluminium valve cover will fit Edelbrock and factory Cleveland heads as well as aftermarket heads that use the Cleveland bolt pattern. Clearance has been designed in for the Edelbrock Victor SC-1 Pro-Port Raw head ED770/69 when using the Jesel rocker arm set-up. No breather holes to allow for custom plumbing of crankcase ventilation system. Aluminium Valve Covers for Ford Cleveland

ED4267

FABRICATED ROCKER COVERS

Aeroflow's Fabricated Rocker Covers are made completely from exceptional quality aluminium and are lightweight. They have a one-piece billet rail CNC machined from 6061-T6 aluminium to guarantee a precision flat surface for superior sealing. They come in either polished or black anodised finished. The covers come standard with a female -8 ORB (some are available with -12) for breather applications and a threaded o-ringed billet oil filler cap. All covers are tall enough to clear 99% of rocker combinations.

BILLET LS SERIES RETRO COVERS

These Aeroflow billet valve covers are machined from a solid block of 6061-T6 aluminium and then hand polished for an amazing finish. They feature super flat gasket rails that ensure no leaks and offer a superior seal for supreme vacuum retention. These covers fit only LS2 & LS3, LS7 OEM style coils. Included in the covers is a female -6 ORB for custom plumbing options. Make a statement at your next car show with these awesome covers!

AF64-4110BLK	Black	LS Series billet rocker covers

BILLET LS VALVE COVERS

The Aeroflow Performance billet aluminium GM LS valve cover will give your Chevrolet LS series engine a performance upgrade over stock and a totally new look. The LS valve covers are CNC machined from billet 6061-T6 aircraft grade aluminium for the most discerning performance engine user. This ensures a superior fit and seal opposed to the cast covers that are plagued with filment and leak issues with the factory gaskets. These valve covers are designed for use in an application where the ignition coils are mounted in a remote location and the taller design will fit over most aftermarket rocker assemblies without requiring a spacer. Each rocker cover features two female -10 ORB ports on either end of the valve covers for aftermarket breather/catch can setups. The driver's side valve cover features a low-profile oil fill cap. They are available with or without Aeroflow Logo and available in Raw finish or Black anodized finish. Custom valve covers can be ordered with your logo. contact Aeroflow (02 8825 1979) for more information.

Standard Style Rocker Covers with Bowtie Logo

Aluminum Small Block Chevy Valve Covers. Black with raised Logo.

- RPCR6336 Tall
- RPCR6334 Short

SUPER-LIGHT, FABRICATED ALLOY VALVE COVERS

These precision welded fabricated aluminum valve covers are offered in two designs: For racing with no holes, and for street (where permitted) with the traditional 1.22" hole and GM designed baffle. Fits all small-block Chevrolet engines from 1958 through 1986 with flange mounting bolt holes. Two covers per box. They have recessed Bow Tie and CHEVROLET emblems, inlaid with classic Chevrolet red, billet mounting rails for maximum leak resistance, and weigh approximately 3 lbs (45%) less than stamped steel die-cast pairs!

- PR141-800 SB CHEV Clear anodized, no baffle
- PR141-802 SB CHEV Black, no baffle
- PR141-801 SB Chev Clear anodized, no baffle.
- PR141-805 BB CHEV Clear anodized, no baffle

Die Cast Valve Covers

These premium valve covers are die-cast aluminum, manufactured to GM specifications, equipped with internal oil drippers (small-block only) and GM-designed baffles. They have recessed Bow Tie and CHEVROLET emblems, inlaid with classic Chevrolet red. All valve covers sold in pairs.

For Chevy® small-block V8, 1958-86.

- PR141-108 Polished
- PR141-116 Black Crinkle
- PR141-117 Chrome Plated

For Chevy big-block, 1965 - later, tall.

- PR141-142 Polished
- PR141-141 Black Crinkle
- PR141-140 Chrome

SB Chev Tall with Mill Raised Emblem

- PR141-119 Black Crinkle

Proform Stamped Valve Covers

These CHEVROLET Bow Tie valve covers are made of heavy gauge steel, 20% thicker than typical aftermarket valve covers. Stamped valve covers are offered in either tall or short. Oil restricting baffles are offered in many valve covers for those who wish to maintain the PCV hookup. All valve covers are sold in pairs, equipped with air breather and PCV grommets. Technical Note: Production height Chevy small-block valve covers and valve covers with baffles will not clear most stud girdle applications.

For Chevy small-block V8, 1958-86.

- PR141-102 Short, with baffle, Chrome
- PR141-103 Tall, with baffle, Chrome
- PR141-750 Short, with baffle, Black Crinkle with Red Emblem
- PR141-751 Tall, with baffle, Black Crinkle with Red Emblem

For Chevy small-block V8, 1958-86.

- PR141-361 Tall, with Baffle, Grey with Recessed Blue & Red Emblem
- PR141-899 Short, with Baffle, Recessed Red & Black Emblem

2-Piece Cast Aluminium Valve Covers

Now you can easily check your valve train while the engine is running.

The diagonal cut of the top section ensures no mess. Each valve cover

features oversize bolts for fast removal, a top and bottom section, and a retained gasket for a tight seal. Tall style, will clear roller rockers and stud girdles and available in six choices. Comes with required Allen wrench. All valve covers come equipped with baffle and grommets. Technical Note: Will not fit cylinder heads with three rectangular raised internal sections near the valve cover mounting surface, unless such sections are milled off.

For Chevy small-block V8, 1958-86.

HOLLEY VINTAGE SERIES VALVE COVERS

Holley is pleased to offer their Vintage Series Valve Covers. These new products are the first of the Vintage Series family of die-cast aluminium dress up products featuring a classically inspired finned design and a retro-style Holley script brand mark.

- Die-cast aluminium construction ensures high detail and reduces the opportunity for warping of the valve cover flange and oil leaks
- 3-1/2" tall with pre-installed internal oil baffles (oil fill and PCV grommets also included)
- Available with and without emissions provisions for your custom application (emissions compliant model includes pre-installed internal oil baffles in both covers, as well as PCV and oil fill grommets)
- Available finishes offered are as cast, satin black with machined fins, and polished

LS CAST ALUMINIUM VALVE COVERS WITH COIL MOUNTING

Holley's cast aluminium valve covers for GM LS engines provide a fresh, refined look without the need to relocate the coils. There's no question that the factory "coil on cover" design give the LS that signature high-tech look, but the factory brackets and coil location leave room for improvement. Clean up that signature look with Holley's LS Valve Covers! They incorporate a radiused shape, angled coil mounting, and a billet fill cap. Plus, the coils mount directly to the cover with no need for a bracket in-between. They fit most popular LS series engines and come in Black Krinkle, Satin, Natural Cast, and Polished. Or, paint to match your vehicle's theme!

- Angled coil mounts deliver a smooth clean look
- Retain the high-tech look and performance of "coil on cover"
- Eliminates unsightly OE style coil brackets
- Four finishes available (Natural Cast, Satin, Black Krinkle & Polished)
- Billet aluminium oil fill cap
- Reuses original gaskets and bolts
- Fits all LS engines using LS3 or similar coils with 72mm bolt spacing
- Clearance for .750" lift cam with stock style rocker arms
- Holley's LS covers utilize proven OE style baffles and vents.

LS Coil Covers

Black Glass
Filled Nylon
Composite

(Big Block Chevy

Covers Replica Look)

Thanks to Holley Big Block Chevy Replica coil covers you can give your LS a Big Block look without the Big Block Price. The new Holley Big Block Chevy replica coil covers are constructed from Glass Filled Nylon Composite for strength and durability. The covers are easily installed by using basic hand tools. Just replace a few coil bracket mount bolts with the included ball studs and snap the covers in place. The Holley Big Block Chevy replica coil covers are completely paintable so they can be customized to your taste. Minor trimming is required.

LS Coil Valve Covers Black BBC Chevy Look And Size H0242-1

COMP CAMS DIE CAST ALUMINUM VALVE COVERS

Manufactured and packaged in the U.S.A., this line of powder coated diecast aluminium valve covers will provide a sleek, high-performance look combined with rigid durability and unmatched reliability. They are a perfect addition to any high-performance engine. These valve covers are perimeter bolt style and include two chrome breathers with laser etched logos, two black rubber grommets and installed baffles. The installed baffles are welded in place to ensure no oil enters the breathers. The chrome breathers are present on both valve covers which allows for proper crankcase ventilation. In addition, these covers were designed to be tall enough to provide the necessary clearance to accommodate aftermarket valve trains.

- Die cast aluminium with black-wrinkle powder coated finish
- Include chrome breathers with laser etched logos, rubber grommets and installed baffles
- Welded-in baffles prevent oil from entering breathers
- Taller height provides clearance for aftermarket valve trains

Billet Specialties Small Block Chevy Valve Covers

Our polished aluminium valve covers are guaranteed to draw attention to your engine compartment. Choose from many styles for small block and big block Chevrolet® applications. Designs are available in short and tall heights, and have a 1.25" diameter breather hole positioned between the rockers to reduce oil splash. Use tall if using roller rockers and stud girdles. Metal baffles are included with all small block valve covers. Valve covers are produced from a high grade aluminium that is polished to Billet Specialties standards and each design is CNC machined in the USA.

The lower ends of the shafts are manufactured with wide shoulders for broad load distribution, and each wing nut is supplied with a separate stud which permits precise gasket positioning on the head prior to mounting the valve covers. Fits Chevrolet small and big block, and V6. 1/4" x 20 threads. 4 per package.

PR141-600 Wing Nuts, Chrome
PR141-756 Wing Nuts, Black Crinkle
PR141-902 Wing Nuts, Chrome, Red Bowtie

Valve Cover Hold-Down Clamps

By spreading the load over a wider area, these clamps minimize distortion of the valve cover flanges, thereby decreasing the possibility of oil leakage. Fits Chevrolet small-block V8 and V6/90° engines through 1986. 4 per package.

PR141-610 Hold-Down Clamps, Chrome
PR141-757 Hold-Down Clamps, Black Crinkle
PR141-903 Hold-Down Clamps, Chrome, Red Bowtie
PR141-366 Hold-Down clamps, Metallic Grey, Blue Bow Tie.

EXTRA LONG VALVE COVER WING NUTS

Extra Long Valve Cover Wing Nuts will clear 4-1/2" tall valve covers. Includes matching studs to speed up installation. Available in chrome plated steel or gold anodized aluminium. Four per pack.

MO68610 Chrome Plated Steel

VALVE COVER

HOLD DOWN TABS

Small Block & 90° V6 Chevrolet

- Specifically designed to spread the fastener load over a larger area of the valve cover flange to eliminate flange distortion and subsequent oil leakage
- Available in brass-plated steel (to match gold anodized and gold zinc covers), chrome plated steel, red and blue powder coated steel

MO68510 Valve Cover Hold Down Tabs, Chrome Plated Steel.

Ford 221, 260, 289, 302, 351W

- Set fits one valve cover, includes three 3" tabs for the shallow recessed bolt holes and one 4" tab for the deep recessed bolt hole. Use 1/4" washer face bolts for the two end holes.

MO68519 Valve Cover Hold Down Tabs, Chrome Plated Steel. Ford 221, 260, 289, 302, 351W.

OIL FILLER CAP PLUG TYPE

This plug features a chrome plated top with the distinctive Mr. Gasket embossed logo in the center. Fits all GM OEM or aftermarket valve covers with 1.221" dia. hole.

MG2067 2 3/16" dia. x 5/8" ht. w/ Logo

MR GASKET

TWIST-ON OIL FILLER CAP

Chrome plated steel oil filler cap. Fits most twist-on valve covers.

Twist-on Oil Filler Cap **MG2062**

BOLT-IN FILLER CAP

- Provides an easy way of adding an oil fill to a valve cover, tank, rear end and other locations
- Since no welding is required then there is not the possibility of heat damage to chrome or powder coat
- Finger Grip cap with a black anodized finish with a Moroso logo
- Cap is manufactured from 6061-T6 billet aluminium, includes O-Ring for leak free sealing

MO68485

LS SERIES OIL FILL CAP BREATHER

This handy oil fill cap breather by AeroFlow Performance is the easiest way to add an aftermarket catch tank to the GM LS engine without the need to modify the OEM valve cover. These late model valve cover fill caps screw into the valve cover like an ordinary cap. They feature an internal baffle inside the cap which helps to reduce transfer of oil to catch can. A -10 ORB is located in the centre for custom plumbing to the catch can or PCV. Billet aluminium construction with a black anodized finish.

AF708-10-10BLK LS series oil fill cap breather
AF59-708-10-10 Replacement o-ring

FORD BARRA OIL FILL CAP BREATHER

This handy oil fill cap breather by AeroFlow Performance is the easiest way to add an aftermarket catch tank to the Ford XR6 Barra engine without the need to modify the OEM valve cover. These late model valve cover fill caps screw into the valve cover like an ordinary cap. They feature an internal baffle inside the cap which helps to reduce transfer of oil to catch can. A -10 ORB is located in the centre for custom plumbing to the catch can or PCV. Billet aluminium construction with a black anodized finish.

CHROME PLATED TWIST ON BREATHER

Chrome plated Breather cap embossed with or without the Mr. Gasket Logo. Features a high porosity filter, plus an internal baffle. Twist on style fits many OEM valve covers.

2-3/4" dia. x 2-1/8" with logo **MG2069**
2-3/8" dia. x 1-3/4" without logo **MG2061**

CHROME PLATED PUSH-ON BREATHER

Dress up your engine with this sharp looking, chrome-plated push-on oil breather...Mr. Gasket logo is embossed on top...This new cap is internally baffled and uses a high-porosity filter...Great for hi-performance use! Fits factory and after-market valve covers with 1.22" dia. hole. Replaces OEM-GM breather 6421868 on late 65-67 GM big block engines.

MG2068 2 1/2" dia. x 2 1/8" ht. w/ Logo

CRANKCASE EVACUATION SYSTEM*

Designed primarily for drag race applications, this crankcase evacuation system is designed to reduce pressure build-up in the engine crankcase, providing for better piston ring seal, less intake charge contamination, and reduced oil leaks caused by high crankcase pressures, while increasing engine performance. Kit includes two chrome plated Mopar style push-on valve cover breathers, two breather grommets, two check valves and two 3 1/2" long, 45 degree cut/threaded tubes, which must be welded into collectors.

MG6002 Crankcase Evacuation System

MOROSO

ONE PIECE PUSH-IN VALVE COVER BREATHERS

- Designed to drain oil trapped in the foam back into the valve cover rather than allow it to drain out the air vents
- Fits Moroso or any valve cover with 1.22" hole
- Two per package except No. 68741

MO68740 One Piece Push-In Valve Cover Breathers, Chrome Plated Steel.

POSITIVE LOCKING BREATHER

- Meets rule requirement for cars running 7.99 E.T. and quicker
- Threaded tube with collar mounts from inside valve cover through 1.22" opening; breather screws into the tube for secure attachment

Viton gasket resists oil, alcohol and race fuel to form airtight seal

- Jam nuts allow breather to be positioned to suit plumbing requirements
- Internal stainless steel baffling keeps oil/air separated
- Clear finish resists rust

Includes all mounting hardware; one per pack

MO68785 - Positive Locking Breather, with Tube for 3/4" hose.

VALVE COVER FILTERED BREATHERS

- Available in half-hooded or non-hooded
- Provides maximum protection against dirt and airborne debris without restricting air flow
- Also available with completely exposed filter element and chrome plated top

All styles come in two types; Push-In or Clamp-On (for existing stacks; includes clamp)

- Cleanable and re-usable; oil before use
- One per pack

Valve Cover Filtered Breather, Non-Hooded style, **MO68817** Push-In type. For Moroso Covers with 1.22" punched holes.

MO68817 1-3/8" Clamp-On with Half Shield

SPRINT CAR BREATHER

TUBE KIT

- Sprint Car racers can now mount an aluminum tube-style crossover breather to their aluminum valve covers and save some money in the process
- Kit comes with all mounting hardware and aluminum bungs which must be welded to the valve covers

MO68762 Valve Cover Breather Kit, SBC Sprint Cars.

Air Breather Caps

The top of each air breather cap is embossed handsomely with a raised Bow Tie emblem to compliment the genuine factory parts appearance of the engine. Black crinkle breather cap is the perfect compliment to die-cast or stamped black crinkle valve covers. For use in valve covers with grommets fitting 1.22" holes. Technical Note: Use with grommet in Grommet Set PR141-615.

- PR141-616** Push-in, 3" dia.
- PR141-754** Push-in, 3" dia., Black Crinkle

For use in valve covers with grommets fitting 1.22" holes.

- PR141-619** Push-in, rectangular

For use with oil filler tube (PROFORM P/N 66020) or 1.82 opening.

- PR141-617** Push-on, 3" dia.

For use with Chevrolet style holes. Technical Note: Manufactured with non-asbestos gaskets. It may be necessary to remove one gasket for proper clearance.

- PR141-618** Twist-on, 3" dia.

SLANT-EDGE ALUMINIUM

PUSH-IN AIR BREATHER CAP

Slant-Edge aluminium push-in breather caps are available in five different finishes, and with just about every Ford Oval emblem configuration imaginable: raised and milled, recessed with inlaid paint, and even no emblem at all. The vivid 3D Oval emblem gives this 2.5 inch diameter breather cap a bold clean look.

- Made from High-Quality Aluminium
- Push-In Style
- Fits Twist-On Holes, and 1.22" Push-In Holes
- Special Twist-On Grommet Included (Mopar Breathers)
- Grommet Not Included (Chev/Ford Breathers)
- Officially Licensed Product

- 1-3/4" I.D KN62-1515

STYLE 3:

Zinc plated steel base plate with attached vent tube. Designed to push in to existing rubber breather grommets. All filters are 3" O.D. with deflector shields and 2-1/2" tall.

GROMMET SIZE

- 1/2" I.D KN62-1517
- 5/8" I.D KN62-1518
- 3/4" I.D KN62-1519
- 1" I.D KN62-1520

Crankcase Vent Filters

Crankcase Vent Filters with and without deflector shield. Designed for racing - Trick enough for show cars (not for use on emission controlled vehicles). Universal mounting, for a wide variety of valve covers. All shields and top plates are chrome plated for beauty and durability.

Steel Base

Crankcase Vents "One Piece Design" For Competition Use

Steel base crankcase vent filters have vent tubes swaged into base. One piece design with rubber or chrome top. Filters with mounting studs can be mounted remotely, but require vent hoses and clamps. Filters mounted direct can be pressed into rubber grommets in valve covers. All baseplates are chrome plated and tubes are zinc.

BILLET LS1 VALLEY PLATE

Aeroflow Performance billet LS1 valley plate is perfect for those who want to clean up the look of their modern LS engine or create a custom touch. Designed to be low profile that will eliminate any fitment issues with factory and aftermarket intakes and still take the factory gasket. Precision manufactured from billet aluminium with a modern, race inspired design and a cost-effective alternative to the factory GM pieces. This valley plate does not have the two provisions for knock sensors, which are usually not used in racing applications, as open headers, solid lifter cams and stiff suspensions can false trigger them. They can be used on factory and aftermarket GM LS1 style engine blocks. Will not fit Gen 4 Engine Blocks (LS3, LS7, or blocks with Active Fuel Management (AFM), DOD) use part number AF77-5016.

AF77-5015 Raw Finish
AF77-5015BLK Black Finish

BILLET LS3 VALLEY PLATE

Aeroflow Performance billet LS3 valley plate is perfect for those who want to clean up the look of their modern LS engine or create a custom touch. Designed to be low profile that will eliminate any fitment issues with factory and aftermarket intakes and still take the factory gasket. Precision manufactured from billet aluminium with a modern, race inspired design and a cost-effective alternative to the factory GM pieces. These valley plates are machined smooth on the underside, allowing for the elimination of Displacement-On-Demand (DOD) or Active Fuel Management (AFM), and instead feature O-Ring gaskets to seal them off. An extra 90-degree provision is bolted to the top of the valley plate for re-installing the oil pressure sensor if necessary.

AF77-5016 Raw Finish
AF77-5016BLK Black Finish

LS VALLEY PLATE BANJO

This GM LS valley plate banjo adapter is designed to fit factory or Aftermarket valley plates including Aeroflow Performance. It is designed to fit the factory oil pressure switch with a M16 x 1.50mm thread. This low-profile banjo will sit the oil pressure switch horizontally rather than the factory position (vertically) to allow for greater clearance.

AF77-5017 M16 banjo bolt

HOLLEY LS VALLEY COVER

Holley continues to expand their offerings for the GM LS engine platform with its latest offering of Aluminium Valley Pan covers for LS1/LS6 & LS2/LS3/LS7/LSX GM LS engines. Available in either the classic finned design to match our popular finned line of valve covers or new trussed design for a race inspired look.

These covers are either die cast or billet aluminium to ensure a high quality, high detail part. Provisions for factory oil pressure sender are cast or marked on the bottom of the cover to allow for individuals wanting to use.

GM12599296

LS Valley Cover - Ribbed

Billet Specialties new LS valley cover is engineered to fit LS2, LS3, LS7 & LSX blocks when using a carbureted manifold. This valley cover's ribbed design is precision machined from 6061-t6 aluminum and polished to a mirror finish to match our other ribbed accessories. High quality ARP 12pt hardware is included for the perfect finishing detail. Featuring a provision machined into the back for the factory breather box and two 1/8" NPT ports for use with external breathers, oil separators or catch cans. Designed for use with your OE factory gasket (not included). Made in the USA.

BS95050

MOON Finned Valley Covers

Available cast to match the No Name valve covers. Breather can be added on request at extra cost. (special order) Gasket & Bolt sets also available call for more information.

ENGINE DIPSTICKS

Aeroflow's Flexible Engine Dipsticks are 308 stainless steel braided covering over a hard-wearing high quality PTFE liner. The handle and ends are made from 6061-T6 then hand polished and chrome plated for a superior finish. A double O-ring seal keeps dipstick secured in tube and prevents crankcase gasses from escaping. These not only look great but the flexible inner dipstick is marked to give accurate oil level readings.

Replacement parts

AF59-2110 Chrome billet handle

AF59-2110BLK Black billet handle

AF59-2111 O-Ring kit for all dipsticks

UNIVERSAL ENGINE DIPSTICKS

Aeroflow Performance universal engine oil dipstick is designed to work with oil pans that have a built in 1/4" NPT fitting or can be used in any custom application with the use of a 1/4" NPT weld-on. It has an overall length of 20.75" (527mm) which can be cut down to suit most custom applications. Just like a range of dipstick it features 308 stainless steel braided covering over PTFE liner, billet handles and the double O-rings for extra security against crankcase gasses escaping. Available in chrome or black anodised.

UNIVERSAL LOCKING ENGINE DIPSTICK

- Efficient twist-lock design eliminates oil leakage, blowing out of handle and prevents crankcase gasses from escaping
 - In Dyno testing, engines equipped with our twist-lock dipstick pulled more vacuum than engines equipped with standard, non-locking dipstick
 - High temperature nylon handle dissipates heat for checking oil level on hot engines
 - Flexible stick zinc-plated, bendable outer tube adjustable clamp
 - 1/4" NPT steel, weld-in fitting supplied for pans that do not already have that provision
 - Existing "full" and "fill" dipstick marks can be used as-is, or new marks can be added to indicate desired oil level
 - Tube and universal mounting tab can be bent or modified to accommodate engine compartment clearances and mounting location
 - Dimensions: overall length, including exposed portion of dipstick - 24"
- MO25973

Flexible Engine Dipsticks

Flexible engine dipstick designed with machined aluminum handle to coordinate with Lokar's Flexible Transmission Dipstick. Slim design allows mounting inside headers. Designed for use with factory or Sanderson cast manifolds. Applications available for GM and Ford. E-Z read stainless stick for accurate measure of engine oil.

GM HOLDEN USING CHEVY ALTERNATOR MOUNTING KIT

When you mount a Chevy alternator to a Holden engine its close but not quite right. AeroFlow have developed a spacer kit to get the fitment and belt alignment perfect. This adapter kit allows the use of AeroFlow Chev 100, 120 and 140 AMP alternators to be mounted to any Holden V8 and even the Holden 6 Cylinder, fitted with a Bosch alternator.

AF4000-1000

Big Block & Small Block Chevy Power Steering Bracket & Pulleys

Engineered to work with GM remote type II power steering pumps. Billet Specialties power steering bracket and pulley is precision machined from 6061-T6 billet aluminum and mounts low on the driver's side of the motor. Check for clearance before ordering, from center of crank to outer edge of power steering pulley is 10.75 inches.

NOTE: requires the use of a 3 groove pulley.

---------	-------------------------------

POWER STEERING BRACKET FOR SAGINAW PUMP. LEFT SIDE FOR LONG WATER PUMP APPLICATIONS

Precision machined in the USA, Billet Specialties power steering bracket is designed to work with Saginaw style power steering pumps. Stainless steel hardware included. For use with v-groove pulleys or serpentine style pulleys. Pulleys sold separately.

BSFM0130PC Small Block Chevy Dimensions: 10.25" from center of crank to outside edge of power steering pulley

BSFM0230PC Big Block Chevy Dimensions: 11.75" from center of crank to outside edge of power steering pulley

AIR CONDITIONING BRACKETS

BILLET LOW MOUNT A/C BRACKET

AeroFlow has developed an air conditioning compressor bracket that positions the compressor low and snug on passenger side beside the block. Made to suit small block Chevy. These brackets are a custom fit and may suit universal applications in hot rods and muscle cars fitted with small block Chevys dependant on space.

(shown fitted in 1969 Camaro). Used with High mount P/S Bracket

SERPENTINE BRACKET SYSTEMS

Style Track Serpentine Pulley Systems

The March Performance Billet Aluminium Style Track serpentine system features a highly styled one piece alternator and air conditioning bracket that provides a rigid support for the alternator and A/C compressor. A separate bracket allows the option of power steering or no power steering.

Kits Include:

- 105 Amp Alternator • Power steering pulley with nose cover
- Alternator pulley with fan and nose cover
- Matching Chrome or Polished A/C compressor
- Aluminium Water pump and pulley • Belt Tensioning Tool
- Aluminium Timing Cover (Ford Windsor Only)
- Alternator and A/C Brackets • All mounting hardware
- Crank pulley (Larger diameter for better accessory drive)
- Power steering pump (does not include hoses or reservoir)
- Power steering bracket with mounting hardware

TRU-TRAC PULLEY SYSTEMS

Tru Trac Serpentine System for Small Block & Big Block Chevy

Kits are also available with Power steering and NO A/C
Tru Trac features: -Easy Straight Forward assembly, No spacers or washers to fool with. -All Hardware and Fasteners are included with each kit. No Running around for anything! -Entire Tru Trac System mounts to engine block, allowing any cylinder head/intake configuration.

Each Kit Includes: -New Polished Power Master 105 amp one wire alternator. -Polished Billet Aluminium Alternator Bracket -Polished Billet Aluminium Alt Fan and Pulley -New Polished Sanden SD-7 Compressor with Polished Manifold Block and Fittings -Polished Billet Aluminium Compressor Bracket -Stainless Fasteners -Polished Billet Aluminium Compressor Cover -Serpentine Belt -Polished Billet Aluminium Support Bracket -New Edelbrock Aluminium Reverse Rotation Water Pump -Polished Billet Aluminium Water Pump Pulley with Hard Coat Anodized belt surface to reduce wear -Polished Billet Aluminium Tensioner Specifically Anodized belt surface to reduce wear -Polished Billet Aluminium Crank Pulley

Kit With Power Steering Also Includes:

- New Aluminium Power Steering Pump (Sweet MFG.) with AN Fittings (-6&-10) Flow Tested and Pre Set to 850psi
- Polished Billet Aluminium Power Steering Pulley
- Polished Billet Aluminium Power Steering Bracket

Tru Trac for Ford Small & Big Block

Exclusive design features a 100% precision-machined billet aluminium timing cover that supports all components. There is no need to tap into the block. The Tru Trac serpentine system fits 289, 302, and 351W motors. Compact: Fits in the tightest engine bays. Perfect for muscle cars and street rods! The Tru Trac's OE styling gives your motor a clean - professional look instead of the clutter of stabilizer bars and adjusters. Note: Not For Use With Mechanical Fuel Pumps. Designed for 4-hole crankshaft dampers, Check Tech Info for details.

Each Kit Includes: -Polished all-billet aluminium timing cover -New Polished Power Master 105 amp one wire alternator. -Polished Billet Aluminium Alt Fan and Pulley -New Polished Sanden SD-7 Compressor with Polished Manifold Block and Fittings -Polished Billet Aluminium Compressor Cover -Polished Billet Aluminium Support Bracket -New Reverse Rotation Water Pump -Polished Billet Aluminium Water Pump Pulley with Hard Coat Anodized belt surface to reduce wear -Polished Billet Aluminium Tensioner Specifically Anodized belt surface to reduce wear -Polished Billet Aluminium Crank Pulley -Stainless Fasteners -Serpentine Belt

Kit With Power Steering Also Includes:

- New Aluminium Power Steering Pump (Sweet MFG.) with AN Fittings (-6&-10) Flow Tested and Pre Set to 850psi @ 4GPM
- Polished Billet Aluminium Power Steering Pulley
- Polished Billet Aluminium Power Steering Bracket

FORD FE Big Block Tru Trac Serpentine System

From the solid foundation of the water pump the Tru Trac for Ford FE installs with any cylinder head or manifold set-up.

Tru Trac for Ford FE includes:

- Precision machined and polished billet aluminium brackets & pulleys
- New polished Powermaster 105-amp one-wire alternator
- New polished Sanden SD-7 compressor with patented A/C manifold block
- New Edelbrock high-performance water pump
- Polished billet aluminium tensioner specifically made for this system
- Polished ARP 12pt stainless fasteners
- Goodyear Gatorback serpentine belt

Kit with power steering also includes:

- New Maval Mfg. GM type-II power steering pump
- Polished billet aluminium bracket and pulley

PONTIAC TRU-TRAC Serpentine System

Tru Trac for the 326/455 Pontiac.

Tru Trac Serpentine Systems Include:

- Polished Powermaster 105 amp 1-wire alternator
- Polished billet aluminium 1pc. alternator fan & pulley
- Natural finish Edelbrock standard rotation water pump
- Polished billet aluminium water pump pulley
- Polished billet aluminium bridge bracket
- Patent-pending polished billet aluminium tensioner engineered specifically for each Tru Trac serpentine system
- Polished billet aluminium tensioner pulley
- Polished billet aluminium crankshaft pulley
- Polished ARP 12-point stainless steel fasteners
- Goodyear Gatorback 6-rib serpentine belt
- Comprehensive installation manual
- Select pulleys are hard-coat anodized for increased durability in high wear areas

Kits With AC Include:

- Polished Sanden SD-7 AC compressor
- Polished billet aluminium AC compressor clutch cover
- Patented polished billet aluminium AC compressor manifold

Kits With Power Steering Include:

- Natural finish Maval Mfg. power steering pump with AN fittings
- Polished billet aluminium power steering pulley

BS14900	with A/C & Power Steering
BS14920	with A/C ONLY
BS14905	with Power Steering ONLY

Small Block Chrysler TRU-TRAC

Applications:

- 318 / 340 / 360 Chrysler

Tru Trac Serpentine Systems Include:

- Polished Powermaster 105 amp 1-wire alternator
- Polished billet aluminium 1pc. alternator fan & pulley
- Natural finish Edelbrock standard rotation water pump
- Polished billet aluminium water pump pulley
- Polished billet aluminium bridge bracket
- Patent-pending polished billet aluminium tensioner
- Polished billet aluminium tensioner pulley
- Polished billet aluminium crankshaft pulley
- Polished ARP 12-point stainless steel fasteners
- Goodyear Gatorback 6-rib serpentine belt
- Comprehensive installation manual
- Select pulleys are hard-coat anodized for increased durability in high wear areas

Kits With AC Include:

- Polished Sanden SD-7 AC compressor
- Polished billet aluminium AC compressor clutch cover
- Patented polished billet aluminium AC compressor manifold

Kits With Power Steering Include:

- Natural finish Maval Mfg. power steering pump with AN fittings
- Polished billet aluminium power steering pulley

Tru Trac for Chrysler 426, 472, & 528 HEMI & BIG BLOCK 383 & 440 B/RB

Billet Specialties' innovative mounting system allows any type of cylinder head or manifold to be used.

Designed For:
• 66 & UP 426 STREET HEMI • 426, 472, & 528 HEMI CRATE
• BIG BLOCK 383 & 440 B/RB

KITS INCLUDE:

- Polished 105 amp one-wire Powermaster alternator
- Polished 1pc. billet aluminium alternator fan & pulley
- Polished Sanden SD-7 A/C compressor
- Polished compressor clutch cover
- Patent-pending polished billet aluminium A/C compressor manifold
- New Mopar Performance water pump & housing
- Polished billet aluminium water pump pulley
- Patent-pending polished billet aluminium tensioner designed specifically for the Tru Trac system
- Polished billet aluminium tensioner pulley
- New power steering pump with AN fittings
- Polished billet aluminium power steering pulley
- Polished billet aluminium crankshaft pulley
- Polished billet aluminium idler pulleys with hardcoat anodizing on high-wear surfaces for added durability
- Polished billet aluminium bridge bracket
- Polished 12-point ARP stainless fasteners throughout
- Comprehensive instruction booklet included

Tru Trac Serpentine: Black Anodized Finish

The popular Tru Trac is now available in a black anodized finish for that stealth high-tech look. Each part begins with an award winning polished surface and is then anodized black for a flawless deep black durable finish. Complemented with a polished alternator and AC compressor for a striking contrast that will demand all the attention that you can handle, make a statement with Tru Trac - Black.

Black anodized Tru Trac systems include:

- Polished Powermaster 105amp 1-wire alternator
- Black anodized billet aluminium alternator pulley
- Natural finish high-performance water pump
- Black anodized billet aluminium water pump pulley
- Black anodized billet aluminium bridge bracket
- Patent-pending black anodized billet aluminium tensioner engineered for the Tru Trac system
- Black anodized billet aluminium tensioner pulley
- Black anodized billet aluminium crankshaft pulley
- Polished ARP 12-point stainless steel fasteners
- Goodyear Gatorback serpentine belt
- Comprehensive installation manual
- Select pulleys are hard-coat anodized for increased durability in high wear areas

Kits with AC include:

- Polished Sanden SD-7 compressor
- Black anodized billet aluminium AC clutch cover
- Patented black anodized billet aluminium compressor manifold

Kits with power steering include:

- Natural finish Maval Mfg. power steering pump with AN fittings pre-installed
- Black anodized billet aluminium power steering pulley

GM LS POWER STEERING DELETE

Aeroflow power steer delete bracket and idler pulley is manufactured from 6061-T6 billet aluminium. This is the perfect choice for engine conversions when deleting the power steering or when doing electric power steering conversions. Aeroflow engineers have designed the kits bracket to suit either early VT-VZ or the late VE-VF belt lines. Kit is complete with all mounting hardware.

AF64-4367	Polished
AF64-4367BLK	Black

Billet LS Belt Tensioners

The GM LS engines with the factory spring loaded belt tensioners become prone to throwing belts when used in performance applications and with aftermarket balancers. These bolt-on Billet LS Belt Tensioners are a fully adjustable solution for controlling potentially damaging resonance and maintaining desired belt tension.

GM LS1, -2, -3, -6 & -7 Adjustable Belt Tensioner w/ Idler Pulley Passenger Cars	C054021
GM LS1 Adjustable Belt Tensioner, 1998-02 F-Body	C054025

HOLDEN GILMER V-GROOVE ADAPTER

Aeroflow's Holden Gilmer power steer V-groove adapter allows you to adapt and run a v-belt accessory such as power steering or air-conditioning with your Aeroflow Holden Gilmer Drive.

Note: Accessory drive mounting brackets may need to be modified to obtain correct v-belt alignment.

Billet Alternator Pulley

1pc. with Fan

The only billet one-piece alternator pulley and fan in the industry, this pulley and fan combo features a bolt on nose cone to hide the alternator nut and washer, stainless hardware included. Fits most GM, Delco, & Ford alternators.

BS85220

Billet Alternator Pulley

Machined in the USA from 6061-T6 billet aluminium this Billet Specialties one piece alternator pulley features a bolt on nose cone to hide the alternator nut and washer. Fits most GM, Delco, and Ford alternators.

BS85120

Billet A/C Clutch Cover - Sanden SD-7

Engineered as a direct bolt on for the new Sanden SD-7 compressor and machined from solid aluminium this cover attaches with the supplied stainless hardware and is polished to a mirror finish. Not for use with Sanden 7186 heavy-duty compressor.

BS87220

Billet A/C Clutch Cover - Sanden 508

Machined from solid billet aluminium, this cover bolts directly to the Sanden 508 clutch with stainless hardware and is polished to a mirror finish.

BS87120

Billet Crankshaft Pulleys

Our crankshaft pulleys are machined from 6061-T6 billet aluminium and polished to a mirror finish. Available for small and big block Chevy™ applications, with either a long or short water pump. Pulleys are 6-7/16" diameter.

Billet Power Steering Pulleys

Machined from 6061-T6 billet aluminium and polished to a mirror finish these power steering pulleys are designed to work with Saginaw power steering pumps with a built-in reservoir. Available in either 1/8" keyway or press-on shaft styles. Keyway pulley works with both long or short water pump applications (1966 - 1976 Saginaw Power Steering Pump). Press-on pulleys are for long water pumps only (1977 - UP Saginaw Power Steering Pump).

V-Belt Pulley Sets

March performance ratio V-belt pulley sets increase horsepower by reducing accessory drag and eliminate belt throwing. Designed for daily street driving. Precision CNC machined to run perfectly true. 6061-T6 aluminium for extra strength and wear. Finished with a "No Polishing" clear powder coat. Includes crank pulley, water pump pulley and alternator pulley with nose cover. Optional power steering pulleys available for use with 2V and 3V crank pulley kits.

Serpentine

Conversion

Pulley Sets

Our performance serpentine pulley sets replace your Low performance V-belts and eliminate belt throwing while retaining your standard rotation water pump. Increases horsepower by reducing accessory drag. Precision CNC machined to run perfectly true. 6061-T6 aluminium for extra strength and wear. Finished with a "No Polishing" clear powder coat. Includes crank pulley, water pump pulley and alternator pulley with nose cover.

Application	Part No.
Chev Small Block with Short Water Pump	MPP6210
Ford 302-351 Windsor & Cleveland	MPP1670

ALTERNATOR PULLEYS

Large 5.00" diameter alternator pulleys to reduce alternator speed for high engine RPM applications. Machined from high grade, lightweight aluminium to reduce alternator bearing loads. Deep groove helps retain V-belt at high RPM. Uses 36" x 17/32" V-belts.

Description	Part No.
For GM and Ford Alternators with 21/32" dia. Shaft	MO64800
For Chrysler Alternators to 1971	MO64840

Billet Aluminium Crankshaft Pulleys

•Machined from the highest grade aircraft billet aluminium for maximum durability
 •Deep precision machined grooves ensure belt retention even during extreme changes in engine RPM
 •When crankshaft and water pump pulleys are used together, water pump speed is reduced by approximately 30%
 •Hard-coat anodized for extended life
 •V style belt
MO64551 - 351C Crankshaft Pulley, Billet, double groove, 4" dia. fits all 4-bolt dampeners, 4.00" O.D.

CRANK PULLEY SHIM KIT

Includes 3 aluminium shims per pack, 1/16", 1/8" and 3/16"
Description
Part No
 Shim Kit Suit SB & BB Chev
MO64031

Cast Aluminium Crankshaft Pulleys

•Precision machined from high grade, lightweight aluminium castings
 •Extra-deep belt grooves provide added belt retention during rapid changes in engine RPM
 •Small pulley diameter slows fan, water pump, and alternator speed to reduce horsepower-robbing drag
 •High RPM water pump operation is improved, reducing impeller speed below cavitation threshold
 •V style belt
MO64060 - SBC Crankshaft Pulley, double groove, 25% reduction, 5.40" O.D. (with short water pump)
MO64050 - SBC Crankshaft Pulley, single groove, 30% reduction, 5.25" O.D. (with short water pump)

CATALYTIC CONVERTERS

UNIVERSAL CATALYTIC CONVERTER

Flowmaster universal catalytic converters are designed to meet federal EPA emissions requirements on a wide variety of applications. These high quality catalytic converters are manufactured in the USA, and feature stainless steel outer shell construction for maximum durability. The internal substrate material and precious metal loading have been carefully engineered for maximum efficiency and to avoid MIL (Malfunction Indicator Lamp) code issues that are common with lower quality converters. Universal catalytic converters require welding and/or fabrication and should be installed by qualified technicians.

Description
 Ceramic 2.50" Inlet/Outlet, 4" O.D x 10.50" Case **Part No.**
 Ceramic 3.00" Inlet/Outlet, 4" O.D x 10.50" Case **FLO2230125**
FLO2230130

UNIVERSAL 200 SERIES CATALYTIC CONVERTER

These high quality round catalytic converters are designed to meet Federal USEPA requirements and will work for a wide variety of universal applications. Features include a compact 4.00 inch diameter x 8.00 inch long spun outer casing for ease of fitment in tight spaces along with high flow 200 Cell metallic substrate internals for severe-duty/high temperature uses. These 2.50 inch inlet/outlet converters are for Pre-OBDI applications and can be used for high performance applications and come with a 5-year/50K case warranty and 25k mile emissions warranty for long lasting durability and performance. These converters are Not Legal for Sale or for Use in California and may Not be Legal in States that follow CARB regulations.

- High Flow 200 Cell Metallic Substrate
- Meets All USEPA Requirements
- Stainless Steel Spun Body
- Compact Size and Shape

Description
 2.50" Inlet/Outlet, 4" O.D x 8" L Case **Part No.**
 3.00" Inlet/Outlet, 4" O.D x 8" L Case **FLO2000125**
FLO2000130

METALLIC CATALYTIC CONVERTERS

Aeroflow's universal catalytic converter is a metallic substrate material encased in a full brushed 304 stainless steel round body. Designed for performance exhaust systems these Hi-flow 50 cells per inch honey comb converters are very low restriction so they don't loose horsepower.
AF9586-2500 63.5mm (2-1/2") Slip fit
AF9586-3000 76.2mm (3") Slip fit
AF9586-3500 88mm (3-1/2") Slip fit
AF9586-4000 102mm (4") Slip fit

CUTOUTS & VALVES

Oval Low Profile Electric Exhaust Cutouts

Low profile electric cutouts are designed for any car or truck that has limited ground clearance. With the Quick Time Electric Cutout you can have the best of both worlds! Quiet for the street and wide open for the strip. You control the volume, you control the power. Open your exhaust with the flip of a switch.
 -Fits 2 1/4" to 3" Round Exhaust Pipe. -Low Profile Design
 -CNC 6061 Aircraft Aluminium Body -Stainless Steel Butterfly Plate and Shaft -6061 Aircraft Aluminium Motor Plate
 -High Torque DC Gear Driven Motor (1 1/2 Ft Lbs TQ)
 -Custom Illuminated Toggle Switch or Optional Controller
 -Weather Proof Connector w/gold plated contacts
QTPEC33-Single **Oval Electric Valve and Oval Connection Pipe**
QTPEC66-Dual **Oval Electric Valves and Oval Connection Pipes**
QTP11338 **Oval Turndown**

Electronic Cutouts

No need to uncap your cutout. With the Quick Time Electric Cutout you can have the best of both worlds! Quiet for the street and wide open for the strip. Go from stealth quiet to wide open power!
 Gain over aftermarket exhaust systems. You control the volume, you control the power. Open your exhaust with the flip of a switch. Run it closed, run it all the way open or any position in between. Adjust your back pressure to save gas. Fits any car or truck, from old school muscle to Street rods.

Replacement Electric Motor

QTP-MOTOR **Suits all Electric Valves**

Electric Cutout Controller

Just when you think our electric cutout is pretty high tech, we bring you The Controller! The Controller is an upgrade from our standard toggle switch. Hit the button and it automatically opens the butterfly for you and stops it at 100%.
QTPEC10200 **Exhaust cut-out controller**

Single Electric Valve, Wiring and Toggle Switch -

QTPEC225	2-1/4" Controller Valve
QTPEC25	2-1/2" Controller Valve
QTPEC30	3" Controller Valve
QTPEC35	3-1/2" Controller Valve
QTPEC40	4" Controller Valve

Dual Electric Valve, Wiring and Toggle Switch

Cut out pipe not included.
QTPEC45 2-1/4" Controller Valve
QTPEC50 2-1/2" Controller Valve
QTPEC60 3" Controller Valve
QTPEC60CP 3" Controller Valve & Stainless Steel Cut Out Kit
QTPEC70 3-1/2" Controller Valve
QTPEC80 4" Controller Valve

Universal 2.5" Turn Down

360 degree floating flange so you can angle the turn down in any direction you want. Designed to bolt to any 2.5 inch 3-bolt flange or behind your QTP electric exhaust cutout. Polished stainless steel. 1/4" Thick Flange
QTP11250 **2.5" Turn Down**

Stainless Steel Cutout Pipes

Stainless Steel Exhaust Cutout. Uncap your exhaust in seconds. 304 Polished Stainless Steel Tig Welded Comes with cap, gasket, bolts and nuts.
2-1/4" S/S Cutout **QTP10225**
2-1/2" S/S Cutout **QTP10250**
3" S/S Cutout **QTP10300**
3-1/2" S/S Cutout **QTP10350**
4" S/S Cutout **QTP10400**

REPLACEMENT INTERMEDIATE WIRE HARNESS

Factory replacement intermediate wire harness for QTP Electric Cut Outs either round style size-es or Ovals, 14" Long
QTP-IWIRE

REPLACEMENT DUAL TOGGLE SWITCH

- Genuine QTEC Toggle Switch
 - Dual Position/Momentary Switch
 - Direct fit for all QTEC Cut Outs
 - Use for Dual Electric Cutouts
- QTP-SWITCH2**

WIRELESS REMOTE CONTROLLER

Awesome things really do come in small packages! Whether space is at a premium in your Car or truck or you prefer to retain stock vehicle appearance or just like the high-tech aspect of it all. The QTEC Wireless Remote-Control system is the answer! The transmitter is small enough to install into the tightest spaces inside the car or truck. Not recommend outside or in the engine bay. Connect your power/ground and plug in your QTEC's. It's as simple as that! Press and hold the button on the remote switch and let go at the desired position. All the way open, or just a touch. The choice is yours! Easy to use push button operation for partial or wide-open settings. You retain control of the amount of sound!
QTP10900

REPLACEMENT QTP BUTTERFLY KIT

- (1) Round Butterfly Plate
- (2) Screws
- (1) Coupler
- (1) Butterfly Shaft

Description	Part No.
2.250" Butterfly Kit	QTP225BLFYKIT

3.500" Butterfly Kit	QTP35BLFYKIT
4.000" Butterfly Kit	QTP40BLFYKIT

MR GASKET Exhaust Cut-Outs

Now you can manually control the flow of your vehicle's exhaust either thru the stock exhaust system or straight out the pipe, with an exhaust cut-out from Mr. Gasket! Made from durable cast iron, the exhaust cut-out will accept 2" O.D. exhaust pipes, though it can be used on other size tubing through the use of adapters/reducers (Not included). Brazing is required. Each cut-out is complete with a control cable and installation instructions.

Exhaust Cut-Out MG5424

EXHAUST CONTROL VALVE

Do you want the benefit of having the full noise and power of an open header at full throttle but also keeping it quiet for cruising the streets? Thanks to AeroFlow Performance the boost activated exhaust control valve (ECV) you can have the best of both worlds. No more wiring up expensive and unreliable electric exhaust cut-outs and no more climbing underneath the car to open the manual exhaust cut-outs. It's just a matter of hooking up the boost referenced vacuum line or a mac valve solenoid and you are ready to go. These ECV is for use with turbocharged vehicles and will open the exhaust valve when boost reaches roughly 6-7psi. Allowing a quieter exhaust when driving around normally. The higher pressures can be obtained with either a installing a manual boost controller or a mac valve solenoid. The exhaust valve is normally closed for all applications. Installation requires fabrication work to weld into the current exhaust system with a T-piece or Y-piece (Sold Separately)

AF9590-3000	76.2mm (3")	exhaust control valve
AF9590-3500	88.9mm (3.5")	exhaust control valve
AF9590-4000	101.6mm (4")	exhaust control valve

EXHAUST FABRICATION

AeroFlow Performance's new range of 304 stainless steel mandrel bends and exhaust accessories are perfect for intercooler, turbo-charger, supercharger and intake pipes. These pipes will not corrode or rust like coated or painted steel pipes. High quality, contaminant free stainless produces clean weld beads, for a show quality welding job!

NOTE: LEG SIZES ARE APPROXIMATE AND MAY VARY.

Tech Tip: To weld 304 stainless steel, to 304 stainless steel use of a 308 stainless steel filler rod is recommended. When welding mild steel to 304 stainless steel use of a 309 stainless steel filler rod is recommended.

Merged Slip-On 12" Collectors

Our Merged Collectors are constructed with the primary tubes joining as they transition into the collector to form a spear eliminating sharp edges and voids to reduce turbulence. This allows more precise management of the sound pressure waves (tuning) and improves aerodynamic flow. These 3 into 1 and 4 into 1 collectors are made from the lightest materials possible. Sold in pairs only

Description	Part No.
1-3/4" Primary, 3" Collector	HK14730

2-1/2" Primary, 5" Collector	HK14704

AEROFLOW MERGE COLLECTORS

Aeroflow's 4 into 1 merge collectors are made out of T304 stainless steel that is durable enough to stand up to the elements and combine high flow and high velocity to increase and broaden an engine's torque curve. The hand porting inside the collector ensures unrestricted, smooth exhaust flow to prevent power loss and excessive backpressure.

AF4175-300	44.5mm (1-3/4") primary's into 76mm (3") collector outlet diameter

EXHAUST FLANGES

CNC STAINLESS STEEL HEADER FLANGES

Custom build your exhaust with high quality Aeroflow components. Aeroflow's CNC header flanges are manufactured from 3/8" (9.5mm) thick 304 Stainless Steel. The Aeroflow header flanges are offered in a variety of sizes to meet your exhaust building needs.

Part No	Description
S/B CHEVY	
AF9551-1000	1-5/8" Round port header flanges suit S/B Chevy
AF9551-1001	1-3/4" Square port header flanges suit S/B Chevy
AF9551-1002	1-7/8" Square port header flanges suit S/B Chevy
AF9551-1010	2" Spread port header flanges to suit S/B Chevy
AF9551-1011	Alloy adapter kit suit large pipes to small bolt pattern

B/B CHEVY	
AF9551-1004	2" Round port header flanges suit B/B Chevy
AF9551-1003	2-1/4" Round port header flanges suit B/B Chevy

LS SERIES CHEVY	
AF9551-1005	1-3/4" Round port header flanges suit LS Chevy
AF9551-1006	1-7/8" Round port header flanges suit LS Chevy

FORD CLEVELAND	
AF9551-1007	1-3/4" Oval port header flanges suit 302-351C
AF9551-1008	1-7/8" Oval port header flanges suit 302-351C
AF9551-1009	2" Oval port header flanges suit 302-351C

FORD WINDSOR	
AF9551-1012	1-3/4" rectangle port header flanges suit 289-351W Brodix
AF9551-1013	1-3/4" square port header flanges suit 289-351W Victor Jr
AF9551-1014	1-7/8" square port header flanges suit 289-351W Victor Jr
AF9551-1015	2" square port header flanges suit 289-351W Victor Jr
AF9551-1016	SBF Aluminium adapter kit suit 50.8mm (2") bolt pattern.

Header Flange Kit

- Aluminium plates simplify the task of matching exhaust ports to large tube, dual flange headers on
- Small Block Chevy engines
- Only 3/8" thick to save weight
- Includes six plates, enough for one engine SB Chev Header Std Port to Spread Port Exhaust Flange Kit M067650

Super Competition Flange Kit

Hooker offer a complete line of "hard to find" specialty header flanges. Flange kits come with gaskets, bolts and polished stainless steel NHRA contingency header I.D. tags. Super Competition Flange Kit, Mopar Hemi 426 Outer Flange Without Stubs, Primary Tube Size 2.250", Port Shape Square

Part #:	Application	Port Shape	Primary Size O.D.(in)
HHK11833HKR	Chevy S/B 18 deg Alloy	Round	2-1/8, 2-1/4

FORD 302-351W- Dart II Hedder Flanges without Stubs

1-3/4" tube diameter
Kit Contents: One pair of Flanges Wide Pattern, Thickness 3/8"
Part# TD10445

TURBINE FLANGES

Aeroflow's machines a variety of exhaust-turbo flanges all manufactured from 3/8" (9.5mm) high quality 304 Stainless Steel.

Part No.	Application
AF9551-0001	GT25, GT28, Turbine inlet flange (T28)
AF9551-0002	GT30, GT35, Turbine inlet flange (T3)
AF9551-0003	T04Z, GT42, GT45, Turbine inlet flange (T4)
AF9551-0004	GT42, GT45, GT51 turbine inlet flange (T5)
OUTLET	
AF9551-0005	GT25, GT28, turbine outlet flange (T28)
AF9551-0006	GT30, GT35, turbine outlet flange (T3)
AF9551-0007	GT42, GT45, GT51 turbine outlet flange (T4)

2 BOLT FLANGES

Aeroflow 2 bolt exhaust flanges are manufactured with our same technique as our machined header flanges, machined 100% flat for a sure seal! Available in sizes 2-1/2" (63.5mm) and 3" (76mm).

AF9551-0009	2-1/2" (63.5mm) I.D. Stainless steel flanges (2 Pack)
AF9551-0010	3" (76mm) I.D. Stainless steel flanges (2 Pack)

3 BOLT FLANGES

Aeroflow 3 bolt exhaust flanges are manufactured with our same technique as our machined header flanges, machined 100% flat for a sure seal! Available in sizes from 2.5" to 4".

AF9551-0011	2-1/2" (63.5mm) I.D. Stainless steel flanges (2 Pack)
AF9551-0012	3" (76mm) I.D. Stainless steel flanges (2 Pack)
AF9551-0013	3-1/2" (88.9mm) I.D. Stainless steel flanges (2 Pack)
AF9551-0014	4" (101.6mm) I.D. Stainless steel flanges (2 Pack)

Copper Collector Gaskets

Embossed copper flange gaskets for a superior seal and longer life. Supplied as pairs with bolts.

CHROME EXHAUST HANGER CLAMPS

Why bolt up your new side pipe exhaust system with those rusty old clamps you've got laying around. Finish off your exhaust system with these stylish chrome clamps.

Description	Part No.
2" Chrome Exhaust Clamp	PATHHPC200

EXHAUST CLAMPS

V-BAND CLAMPS WITH FLANGES

Aeroflow V-Band kits are available in 6061-T6 aluminium, mild steel or 316 stainless steel weld flanges and a stainless steel quick release clamp. New self-aligning V design. The weld flanges have been designed with a male to female connection which not only helps align the bands but also provides multiple sealing surfaces which prevent leaks and warping. Mild steel weld flanges are plated in high lustre weld through coating to help prevent rust and corrosion.

Note: Moly grease all threads before installation and removal.

REPLACEMENT QUICK RELEASE

V-BAND CLAMP

Aeroflow Performance quick release V-Band clamp makes it easy to install and remove exhaust systems and turbo parts. Great for racers and tuners, these clamps make it easy to remove parts to gain access to vital components easily as there are no hard to reach bolts or special tools needed. Simply undo the clamp and you can remove the component easily.

NOTE: This is the outer V-band clamp only and can be used to replace bolt style V-band clamp.

1967-69 CAMARO & FIREBIRD LS Headers

Muscle Rods Headers from Hedman Husler are designed specifically for the installation of an LS series engine into 1967-69 GM F-Body vehicles. Available in either HTC Ceramic-metallic coated or uncoated. Each set of headers comes with the required gaskets and bolts.

Style	Primary	Collector	Uncoated
Mid Length	1-3/4"	3"	TDH45060
Long Tube	1-3/4"	3"	TDH45070
Long Tube	1-7/8"	3-1/2"	TDH45090

Super Comp Block Huggers

Street Rod/Universal SUPER COMPETITION Headers are great for custom car, truck, or street rod where a specific fit tuned SUPER COMPETITION header is not available. They work great for those tight-fit installations where frame rails are close to the engine block. Stock motor mounts can be used. Because the collector exits parallel with the oil pan rail, maximum ground clearance is allowed. These Headers come complete with gaskets, header bolts and collector reducers. These Headers come available in chrome, high heat resistant black paint or Hookers Metallic Ceramic Thermal Barrier Coating.

Small Block Chevy Block Huger Headers

SBC 262-400, Tube Size 1.625", Collector Size 2.5", Collector Length 4", Port Shape: Round, Black High Temp Paint
Black Coating HK2100
Stainless Steel finish HK2100-2HKR

Super Comp. LS-1 Chevy Block Huger Header

Street rod owners who have installed a LS-1 or derivative engine and need maximum frame rail clearance with complete access to engine mounts and starter.

Coated Finish	HK2313HKR
Stainless Steel Finish	HK2314HKR

EXHAUST HEADERS

DO NOT RUN CERAMIC COATED HEADERS IN WITH NEW ENGINES

CHEV Shorty Headers

Fits Small Block Chevy 1967-81 Camaro 283 - 400 (not 67-90 with A/C), 1968 - 87 Chevelle 283-400, 1968-79 Chevy II & Nova and 1970-87 Monte Carlo 283-400. Flange thickness-3/8. Tube diameter - 1-5/8" with a 5/16" collector.
Includes collector reducers, gaskets & header bolts.

Ceramic Coated

LS1 / 6 BLOCK HUGGERS

The Aeroflow Performance block hugger headers are a universal fitment to suit the GM LS1/LS6 They are a retro fit, tight fit block hugger designed for use in conversion cars.

This header kit will include:

- 2x header manifolds
- 2x exhaust manifold gaskets
- 2x collector flanges
- 2x 3-bolt collector gaskets
- 2x weld-in O2 sensor bungs
- 12x M8x1.25mm header bolts
- 6x 3/8"-24 bolts/nuts/washer

Specs are :

Primary tube diameter is 41.28mm (1-5/8")

Collector diameter is 38.1mm (2-1/2")

Round Port 42.4 x 42.4mm (1.67" x 1.67")

Dimensions are :

Width of header at widest point from exhaust port 104.9mm (4.13")

Height of header from top of flange to lowest point 311.15mm (12.25")

AF9599-1001 Steel/Black
AF9599-1002 Stainless Steel

FORD FLAT HEAD BLOCK HUGGERS

Aeroflow Performance stainless steel centre dump headers are a universal fitment to suit the 1932-1953 Ford V8 Flathead. These are manufactured from high tubular steel and is not recommended for use with the stock Ford wishbone front suspension.

This header kit will include the following:

- 2x header manifolds
- 2x 4 bolt square header flange
- 2x 4 bolt square gaskets
- 6x manifold exhaust gaskets
- 4x 7/16"-14 header bolts
- 4x 3/8"-16 header bolts 6 x 3/8"-24 bolts/nuts/washer

Specs are:

Primary tube diameter is 44.45mm (1-3/4")

Collector diameter is 63.5mm (2-1/2")

Round port 41.14 x 41.14mm (1.62" x 1.62")

Dimensions are:

Width of header at widest point from exhaust port 154.95mm (6.10")

Height of header from top of flange to lowest point 190.5mm (7.50")

AF9599-1000 Stainless Steel

Super Comp. 392- 502 Chevy Block Hugger Headers

Block Hugger Headers will not fit any factory application with side engine mounts including 63-82 Corvette.

Ceramic Coating
Stainless Steel Finish

TIGHT TUCK Headers

Tight Tuck headers are the solution to many problems associated with engine swaps in modern street rods. Tight Tucks fit in the tightest of engine compartments and clear all stock motor mounts. Our applications include headers for small and big block Chevy engines, small block and Flathead Ford engines and small block Mopar engines. Most headers are manufactured from durable 16-gauge tubing and comes complete with gaskets, header bolts and collector reducers. Tight Tuck headers are available in three finishes; raw finish for individual customizing, chrome finish for that show quality shine or with Patriot's very popular metallic ceramic coating.

STREET ROD HEADERS

Patriot Street Rod Headers are the solution when a universal Tight Tuck won't fit, or when you want more power. Street Rod Headers are available in Mid Length, Long Tube, and Fenderwell designs. Mid Length Headers offer greater performance over Tight Tucks yet have excellent ground clearance on lowered applications. Long Tube Headers are the ultimate performance header with longer primary tubes for maximum torque and horsepower. Fenderwell Headers offer the same performance benefits in an over the chassis exit design for more steering and engine compartment room and that gasser look. Applications for 1920's through 1950's Ford and Chevy engine and frame combinations, plus popular front frame clip swaps. CAMARO FRONT CLIP

ROADSTER Headers

Roadster "Fad T" and '32 Hi-Boy headers have set the industry standard for style, quality and performance. Choose between the Classic or the high performance Sprint style for small and big block Chevy and small block Ford engines. Match these headers with our Turnouts and integral mufflers for a complete exhaust system. Roadster headers are available in raw finish, with Patriot's metallic ceramic coating or with show quality chrome.

LAKESTER Headers

Give your rod a nostalgic look with our Lakester style fully welded header. Fits T-Buckets, Model As, 32-34 Hi-Boys and most other fenderless street rods with small and big block Chevy or Ford small block engines. Classic design allows for hookup to an under chassis exhaust system, but by removing the provided blockoff plates you can easily uncore your headers.

Turbo Dump Pipes

A mandrel bent dump pipe off the turbo is one of the most effective exhaust mods you can make to a turbo engine and will help your engine to build boost faster and make more power. All Pacemaker dump pipes are 3" mandrel bent with flanges at both ends.

TURBO EXHAUST MANIFOLDS

CAST TUBULAR MANIFOLD FOR LS

Patriot's cast iron manifolds for GM LS engines offer a wide variety of fitment applications maximizing engine bay clearance. The Patriot LS cast manifold also incorporates a sealing dome and ships with a pair of 304 series stainless steel reducers to help route your exhaust system with more adjustment options than the competition. No more expensive GM gaskets needed to get you on the road. These manifolds fit many LS engine swaps.

Description	Raw Cast	Hi-Temp Black
LS Series Cast Exhaust Manifold	PATH8097	PATH8097-B

FLOWTECH LS TURBO HEADERS

Flowtech Headers are the perfect combination of quality and value. These "4 to 1" LS Turbo headers available in 1-3/4" and 1-7/8" tube diameters are an ideal design creating a compact package allowing a variety of configurations (Up and Forward, Down and Forward, or Down and Back) to be used as a universal fit Turbo header.

- CNC Mandrel-bent tubes provide consistent tubing diameters for smooth flow and increases the cylinder scavenging effect and improves engine breathing
- Heavy duty 16-gauge 304SS (Polished Finish Only) and 409SS (Natural, Black Painted, and Ceramic Coated finishes) tubing for increased strength and durability
- 1-3/4" and 1-7/8" tubing diameters available for increased exhaust flow increasing performance and improved throttle response
- 3" collector for maximum strength and exhaust flow
- 7/16" thick header flange for a leak-free seal and maximum strength
- Premium aluminium header gaskets included
- 3" V-Band Flanges and Clamps are included
- Available in a total of four finishes (Natural, Black Painted, Ceramic Coated, and Polished)

AF8200-1000

GM LS UNIVERSAL CROSS OVER PIPE AF8200-1000

GM LS universal cross over steampipe manifold. Can be used to fit both single and twin turbo manifolds. Slip joint and flexible joiners are designed to be welded in the correct length position once fitted to vehicle.

GM LS SINGLE TURBO MANIFOLD AF8200-1010

GM LS single turbo steampipe manifold. Suits drivers side. Factory OE design.

GM LS T4 TWIST MOUNT ADAPTER AF8270-2000

GM LS T4 twin entry twist mount adapter. Suits both single and twin turbo GM LS turbo manifolds. V-Band to T4 which rotates the turbo to an angle for tight clearances.

GM LS T4 STRAIGHT MOUNT ADAPTER AF8270-2005

GM LS T4 twin entry straight mount adapter steampipe manifold. Suits both single and twin turbo GM LS turbo manifolds. V-Band to T4 adapts the turbo straight from the turbo manifold good for cars with lots of clearance or larger turbocharger.

AF8207-1104

MITSUBISHI

AF8207-1100 MITSUBISHI EVOLUTION UPGRADED V-BAND

MODEL: Mitsubishi Evolution 4-9 with 4G63 engine turbo steampipe manifold with 1-1/2" running tubes
FLANGE: V-Band GT30.
MOUNTING LOCATION: Low Mount.
WASTEGATE: Single 50mm external wastegate

AF8207-1104 MITSUBISHI EVOLUTION UPGRADED V-BAND

MODEL: Mitsubishi Evolution 4-9 with 4G63 engine turbo steampipe manifold with 1-1/4" running tubes
FLANGE: V-Band GT30.
MOUNTING LOCATION: Low Mount.
WASTEGATE: Single 50mm external wastegate

AF8207-1101 MITSUBISHI EVOLUTION T3

MODEL: Mitsubishi Evolution 4-9 with 4G63 engine turbo steampipe manifold.
FLANGE: T3 single entry.
MOUNTING LOCATION: Low Mount.
WASTEGATE: Single 50mm external wastegate

AF8207-1103 MITSUBISHI EVOLUTION OEM

MODEL: Mitsubishi Evolution 4-9 with 4G63 engine turbo steampipe manifold.
FLANGE: Stock Frame OEM DSM 1g/2g.
MOUNTING LOCATION: Factory Location.
WASTEGATE: Internal wastegate

AF8207-1102 MITSUBISHI EVOLUTION UPGRADED STOCK FRAME

MODEL: Mitsubishi Evolution 4-9 with 4G63 engine turbo steampipe manifold with upgraded 1-1/4" running tubes
FLANGE: Stock Frame OEM DSM 1g/2g.
MOUNTING LOCATION: Factory Location.
WASTEGATE: Internal wastegate

AF8200-1100 MITSUBISHI EVOLUTION DUMP PIPE

Mitsubishi Evolution exhaust dump pipe to suit all GT30 style turbochargers when bolted onto our range of turbo manifolds. This 3" dump pipe is manufactured from pie cuts to give it extra clearance to clear engine components such as the A/C compressor in the engine bay. It includes a 3" v-band welded to the other end to allow a fabricator to finish off your exhaust system.

Turbo Manifolds

AeroFlow Performance steampipe turbo manifolds are a series of pipes that collect exiting exhaust gases which can be channelled into our merge collector which are perfectly matched to our Boosted range of turbochargers. Our merge collector design allows all pipes to enter at the exact same angle, and merge together at a point in the middle, pointing straight into the turbine. No pipes enter across each other, so airflow is not disrupted, meaning a perfect balance between boost control and flow. With minimal back pressure where the manifold meets the turbo, you can be sure that you're getting the best flow possible from our turbo manifold.

AeroFlow turbo manifolds are finished to the highest of standards, constructed from thick wall 3mm mandrel bent steam pipe with CNC Machined header and turbo flanges. Each flange is milled after welding to ensure precise surface finish. These manifolds are supplied with a short wastegate starter pipe designed to allow the fabricator to choose the size of the wastegate required, and the position the wastegate sits in.

Each manifold is finished with a black enamel coated finish that withstands high temperature exhaust that has proven to withstand excessive heat. We do recommend to have this manifold either wrapped with exhaust wrap or ceramic coated to ensure protection for external accessories and reduce under bonnet temperatures. The AeroFlow Performance turbo manifolds are available to suit many makes and models along with different flange and wastegate sizes available.

AF8200-2000

GM LS UNIVERSAL TWIN TURBO MANIFOLDS AF8200-2000

GM LS twin turbo steampipe manifolds. Sold as a pair. Forward facing 2.5" V-Band's attached.

UNIVERSAL LONG RUNNER TWIN TURBO MANIFOLDS AF8200-2005

GM LS Long Runner twin turbo steampipe manifolds. Sold as a pair. Forward facing 2.5" V-Band's attached. Will fit 27" of frame rail distance.

AF8200-1005

GM LS SINGLE TURBO MANIFOLD AF8200-1005

GM LS single turbo steampipe manifold. Suits passenger side. V-Band on both ends.

NISSAN RB30

AF8207-6000 NISSAN RB30 V-BAND

MODEL: Nissan RB30 turbo steampipe manifold.
FLANGE: V-Band GT30.
MOUNTING LOCATION: High Mount.
WASTEGATE: Single 50mm external wastegate

AF8247-6000 NISSAN RB20, RB25 & RB26 T3

MODEL: Nissan RB30 turbo steampipe manifold.
FLANGE: T3 single entry.
MOUNTING LOCATION: High Mount.
WASTEGATE: Single 50mm external wastegate

AF8245-7000

NISSAN SR20

AF8205-7000 NISSAN SR20 V-BAND

MODEL: Nissan SR20 turbo steampipe manifold.
FLANGE: V-Band GT30.
MOUNTING LOCATION: High Mount.
WASTEGATE: Single 45mm external wastegate

AF8245-7000 NISSAN SR20 T3

MODEL: Nissan SR20 turbo steampipe manifold.
FLANGE: T3
MOUNTING LOCATION: High Mount.
WASTEGATE: Single 45mm external wastegate

AF8235-7000 NISSAN SR20 T28

MODEL: Nissan SR20 turbo steampipe manifold.
FLANGE: T3
MOUNTING LOCATION: Factory Position
WASTEGATE: Single 45mm external wastegate

FORD BARRA

AF8227-3000 FORD FALCON BARRA BA BF FG V-BAND

MODEL: Ford Barra BA BF FG turbo steampipe manifold.
FLANGE: V-Band GT45.
MOUNTING LOCATION: High Mount.
WASTEGATE: Single 50mm external wastegate

AF8277-3000 FORD FALCON BARRA BA BF FG T4

MODEL: Ford Barra BA BF FG turbo steampipe manifold.
FLANGE: T4 twin entry.
MOUNTING LOCATION: High Mount suits GT35/GT40/GT42 style turbo sizes in T4 flange
WASTEGATE: Single 50mm external wastegate

AF8247-4000

NISSAN RB20 / RB25 / RB26

AF8207-4000 NISSAN RB20, RB25 & RB26 V-BAND

MODEL: Nissan RB20 / RB25 / RB26 turbo steampipe manifold.
FLANGE: V-Band GT30.
MOUNTING LOCATION: High Mount.
WASTEGATE: Single 50mm external wastegate

AF8247-4000 NISSAN RB20, RB25 & RB26 T3

MODEL: Nissan RB20 / RB25 / RB26 turbo steampipe manifold.
FLANGE: T3 single entry.
MOUNTING LOCATION: High Mount.
WASTEGATE: Single 50mm external wastegate

AF8245-1200

SUBARU EJ20 / EJ25

AF8205-1200 SUBARU TWIST MOUNT V-BAND ADAPTER

MODEL: Subaru with EJ20 / EJ25 engines.
FLANGE: V-Band GT30.
MOUNTING LOCATION: Twist Mount.
WASTEGATE: Single 45mm external wastegate

AF8245-1200 SUBARU TWIST MOUNT T3 ADAPTER

MODEL: Subaru with EJ20 / EJ25 engines.
FLANGE: T3 Single Entry .
MOUNTING LOCATION: Twist Mount.
WASTEGATE: Single 45mm external wastegate

TOYOTA 2JZ

AF8227-1000 TOYOTA 2JZ V-BAND

MODEL: Toyota 2JZGTE turbo steampipe manifold.
FLANGE: V-Band GT45.
MOUNTING LOCATION: High Mount.
WASTEGATE: Single 50mm external wastegate

AF8277-1000 TOYOTA 2JZ T4

MODEL: Toyota 2JZGTE turbo steampipe manifold.
FLANGE: T4 twin entry.
MOUNTING LOCATION: High Mount suits GT35/GT40/GT42 style turbo sizes in T4 flange.
WASTEGATE: Single 50mm external wastegate

SMALL BLOCK CHEV UNIVERSAL TWIN TURBO

MANIFOLDS

AF8200-1300
Small Block Chevy 350 twin turbo steampipe manifolds.
Sold as a pair.
Forward facing 2.5" V-Band's attached.
1-7/8" Primary Tubes.
2-1/2" Merge Collector.

BIG BLOCK CHEV UNIVERSAL TWIN TURBO MANIFOLDS

AF8200-1400
Big Block Chevy 396-454 twin turbo steampipe manifolds.
Sold as a pair.
Forward facing 3" V-Band's attached.
2" Primary Tubes.
3" Merge Collector.

SMALL BLOCK FORD UNIVERSAL TWIN TURBO

MANIFOLDS

AF8200-1500
Small Block Ford 289-351 Windsor twin turbo steampipe manifolds.
Sold as a pair.
Forward facing 3" V-Band's attached.
1-7/8" Primary Tubes.
3" Merge Collector.

TURBO MERGE COLLECTORS

AF8300-1000

TURBO EXHAUST MERGE COLLECTORS

All fabricators know that more often than not the most time-consuming aspect of fabricating a turbo manifold is making the merge collector! The AeroFlow Performance turbo merge collector range will save you hours of labor when fabricating a manifold and no more wasting material trying to figure out optimal angles. These cast 304 stainless steel merge collectors are a crucial point when it comes to an even flowing exhaust manifold. Each merge collector is cast meaning no welds can potentially crack over time. Available in either 6 into 1 or 4 into 1 configuration with multiple flange options to choose from.

AF8300-1000 Style: 6 into 1 Design: Oval Shape Collector
Flange: V-Band (AF8080-1016) Wastegate: No Wastegate Hole

MOROSO SPIRAL FLOW RACING MUFFLERS

Using advanced gas dynamics and sophisticated noise cancellation acoustics, Moroso engineers have developed the finest and most durable Racing Mufflers for your Exhaust System. Specially engineered spiral baffles divide the exhaust flow into two separate paths, significantly reducing noise levels with minimal backpressure.

- Reduced noise levels with minimal backpressure
- These mufflers offer a 5 - 7 db drop over open collectors and the mufflers flow 850 C.F.M

5000 SERIES

MUFFLERS

AeroFlow's 5000 series mufflers are the perfect choice for today's street driven high horsepower muscle cars where both flow for maximum performance and dB reduction are critical. Manufactured from durable 16 gauge TIG welded aluminised steel and coated in a high temp silver finish, AeroFlow's 5000 series mufflers are a chambered design for a consistent sound that won't change over time. When used as part of an appropriate exhaust system they offer a throaty exhaust sound on acceleration and quiet operation at idle and cruising speeds. These mufflers are available in 3 configurations (Center/Center, Offset/Center and Offset/Offset) with inlet/outlet sizes in both 2-1/2" (63.5mm) and 3" (76mm). Compact case dimensions, length 13" 330mm, width 10" 255mm and height 4-1/4" (110mm) will fit many applications, perfect for the single system or classic muscle car dual exhaust.

Part No	Description
AF5000-250	63.5mm (2-1/2") offset / offset, 330mm (13") length, 254mm (10") width, 108mm (4-1/4") height

STAINLESS STEEL

MUFFLERS 5500 SERIES

AeroFlow's 5500 series mufflers are the perfect choice for today's street driven high horsepower turbo cars where both flow for maximum performance and dB reduction are critical. Manufactured from durable 16 gauge TIG welded 304 stainless steel, AeroFlow's 5500 series mufflers are a packed style with perforated tube design that aids performance. These mufflers are available in 3 configurations, Center/Center, Offset/Center and Offset/Offset with inlet/outlet sizes in both 2-1/2" (63.5mm) and 3" (76.2mm). Compact case dimensions: Length 13-3/4" 350mm Width 9-1/2" 241mm Height 5-5/16 135mm. Will fit many applications, perfect for the single system or dual exhaust.

Part No	Description

QUICK PERFORMANCE AR3 RACE MUFFLER

The AR3 delivers a high quality muffler with a compact design with excellent flow characteristics while helping drivers and tracks support environmental concerns. The AR3 Race Muffler delivers maximum performance in a small, lightweight package. A low profile height combined with a free flowing perforated internal baffle to minimize resonance. 304 stainless steel construction and tig welded throughout for long life.

- Low Profile Design Provides Great Clearances
- Dual Flow Design
- 304 Stainless Steel Construction Inside and Out
- Fully Tig Welded
- Meets Mufflers Requirements At Race Tracks
- High Temperature Sound Absorbing Material
- Available Sizes are 2.5", 3.0", 3.5", and 4.0"

Part No.	Description
QTP12250	2.5" Centre/Centre AR3 Muffler
QTP12300	3.0" Centre/Centre AR3 Muffler
QTP12350	3.5" Centre/Centre AR3 Muffler

QTP SCREAMER TWINTRONIC MUFFLER

With the success of our electric cutout we took it to the next level, The Screamer. A dual mode muffler with a single inlet with a dual outlet. One outlet is a straight pipe with a valve at the end on a 360 degree floating flange for total adjustability. When the valve is open you get the loud and free flowing exhaust system. Close the valve and the exhaust gases are diverted through the muffled section to get the quiet mild mannered sound.

- Electronic dual mode exhaust system • Total user control over power & sound • 304 stainless steel construction
- Quiet to riot with the flip of the switch • Available in 2.5" and 3" sizes • Made in the U.S.A.

Kit Contents

- Screamer Muffler • QTEC Electronic Valve • Wire Harness
- Dual position momentary switch • Hardware & Gasket

Description	Part No.

3.000" Screamer Muffler Kit	QTP13300C

SUPER 44™

STREET & STRIP

The Super 44™ is the most aggressive, deepest sounding street and strip muffler Flowmaster has ever made! The Super 44's Maximum performance and Improved flow path will generate more torque and more power than ever before! If you want to really hear your exhaust system inside as well as outside your vehicle the Super 44™ is for you.

Application Recommendations:

- Off Road and Race applications. • Vehicles with dual exhaust
- Aggressive Tone for Early Street/Strip Cars
- Early Generation Muscle Cars. • Late Model Muscle Cars

Super 44™ Standard 4" Case

SUPER 40 STREET/STRIP Two Chamber High Performance Mufflers

The Super 40 is our latest development utilizing

"Gen II Delta Flow" technology. This gets you the best of both worlds of Sound and Performance. The Super 40 has that "deep powerful" sound of the original 40 series but with all the benefits of performance and low interior resonance from the "Delta Flow" technology." The Super 40 5x10-inch case design, modeled after our Top Ten race mufflers, gives you a deeper tone that retains our famous 40 Series sound and feel. Our Super 40 is the most aggressive, deepest sounding street 2-chamber muffler.

Application Recommendations:

- High horsepower street cars . Deep performance tone
- Reduced Interior Resonance. Increased flow path radius
- Vehicles with dual exhaust

50 SERIES Delta Flow - Three Chamber Mufflers STREET/STRIP

This is the latest design of the 50 series™ muffler that utilizes Flowmasters patented "Delta Flow" technology along with an Helmholtz Chamber to eliminate most all interior resonance and still have that famous Flowmaster sound outside the vehicle. Constructed of 16 gauge aluminized steel and fully mig-welded for maximum durability. The Flowmaster 50 Series Delta Flow mufflers is designed to produce a mellow, deep sound in most vehicle and truck applications. It is milder than the 40 Series mufflers on the outside of the vehicle, and is significantly quieter inside the vehicle, yet it still has the right performance sound and feel.

Application Recommendations:

- Street/Strip Vehicles & Sport Trucks. Early/Late model Street Rods Performance Vehicles. Vehicles with dual exhaust

Case: 17.00 in. x 9.75 in. x 4.00 in.

60 SERIES Delta Flow - Three Chamber Mufflers

The 60 Series incorporates Flowmasters patented "Delta Flow" technology to produce a nice mellow sound for your sport compact car & Truck. A larger diameter tailpipe will create a deeper tone both inside and outside the vehicle. Constructed of 16 gauge aluminized steel and fully mig-welded for maximum durability. The 60 Series Performance muffler is designed specifically to bring Flowmaster performance to smaller cars and trucks with small displacement 4 and 6 cylinder engines. All 60 Series mufflers feature Delta Flow technology for increased torque, horsepower and reduced interior resonance.

Application Recommendations:

- High Performance Street/Strip applications
- Small Displacement 4 and 6 Cylinder vehicles. Sport Compact

DBX ROUND MUFFLER

DBX series mufflers - this Laminar Flow internal configuration muffler features the revolutionary HP core design delivering excellent sound control for a wide variety of engine types where vehicle under-chassis space is limited. Utilizing cool shell technology to minimize radiant heat from the muffler body, they are perfect for sport compact imports as well as muscle cars and other performance applications. Constructed with 409S stainless steel internal components and wrapped with a proprietary insulation material and finally a polishable 304 stainless steel casing, these mufflers are as attractive as they are functional delivering a moderate to aggressive tone.

HOOKEER Aero Chamber Mufflers

The all aluminized and stainless steel Aero Chamber is designed to do much more than simply muffle exhaust noise. The Aero Chamber Muffler produces a deep throaty powerful sound that will not change with time. The Hooker Aero Chamber uses a unique step principal, similar to that which is currently popular in racing header design. The aerodynamically designed chambers flow 23% better and produce more horsepower and torque than the most popular high performance brand.

HOOKEER Maximum

Flow Mufflers

The Hooker Maximum Flow muffler actually flows 99% and produces more horsepower and torque than a 2-1/2" open pipe. The Maximum Flow is constructed of an aluminized steel case with stainless steel internal core and uses a high temperature packing material to absorb excessive noise while allowing a mellow powerful sound. As with all absorption type silencers, the Maximum Flow will be most effective for sound control with lower compression (8.5 to 1 and lower) motors with conservative Camshafts and with applications using catalytic converter(s). The Maximum Flow flows either direction, allowing for easy installation.

HURST 2015-16 FORD MUSTANG GT 5.0L EXHAUST SYSTEM

Hurst's new Elite Series Cat-back exhaust system for the 2015 - 2016 Mustang GT with the 5.0L V8 is constructed using the highest quality materials and finest craftsmanship available today. Hurst Elite Series systems feature fully mandrel-bent 304s stainless steel tubing that has been custom-designed and exclusively manufactured by industry-leading Flowmaster Inc. to ensure a precise fit every time! The Hurst engineers then added an X-pipe crossover which provides maximum scavenging, sound, and performance, and paired it with a set of fully polished 304s stainless steel Hurst mufflers. The mufflers utilize a high-thermal sound absorption barrier with a large 3.0in straight-through performance core that provides a deep, classic tone reminiscent of Hurst's iconic heritage. The 4.0in mirror-polished stainless steel tips, featuring laser-etched Hurst logos, finish off the system and put the world on notice that you're serious about performance and style. You can take comfort and pride in knowing that every Hurst Elite Series Cat-back exhaust system is hand-fabricated in the USA **HU6350024**

WELD ON FITTINGS

WELD IN ALLOY PLATE

Aeroflow Performance Weld in alloy plate with 3 x -6 ORB female ports. Can be welded in to any alloy pipe for vacuum ports or breather return.

Overall Length 85mm (3-11/32")
Overall Width 35mm (1-25/64")
Overall thickness 9mm (23/64")

SPACERS

BILLET SPACERS

These billet aluminium spacers are perfect for spacing and mounting fabricated parts. They can be welded to the part or just inserted between the part and mounting surface to provide the required clearance. They are supplied in a pack of 4 (2 x 5.5mm and 2 x 11.5mm) (2 x 7/32" and 2 x 29/64").

Part No	Size	Finish
AF64-4375	M6 (1/4")	Silver
AF64-4375BLK	M6 (1/4")	Black
AF64-4376	M8 (5/16")	Silver
AF64-4376BLK	M8 (5/16")	Black
AF64-4377	M10 (3/8")	Silver
AF64-4377BLK	M10 (3/8")	Black

HEX SPACERS

These billet aluminium hex spacers are perfect for spacing and mounting fabricated parts. They can be welded to the part or just inserted between the part and mounting surface to provide the required clearance. They feature female M6 x 1.00mm threads on either end and an external hex for tighten and loosen with a spanner. Sold in either silver or black finish with an overall length of 40mm.

Part No	Finish
AF64-4385	Blue sold individually
AF64-4385BLK	Black sold individually
AF64-4385S	Silver sold individually

BEARINGS AND BUSHES

MEZIERE MISALIGNMENT BUSHING

When you are putting your spherical rod ends to the test, these high misalignment bushings may be just what you need. Made of 4130 alloy, these bushing allow the spherical end to swivel through a much wider arc which provides you with a more versatile mechanism.

LOW PROFILE BILLET ALLOY WELD ON FILLER & CAP

AeroFlow's lightweight, non-vented filler caps feature a low profile aluminium weld-on which make them perfect for tight clearance applications. These caps are manufactured from 6061-T6 aluminium and are supplied with a BUNA-N (great for a wide range of fuels and oils) and EPR O-Ring seals (for use with Nitro methane fuels). Available 1-1/2", 2", 2-1/2" and 3" diameters in blue, red, black, gold, purple, raw, polished and silver anodized finishes.

SAFETY WASHERS

MEZIERE SAFETY WASHERS

As the name implies, these parts make your spherical rod end installation safer. These parts perform two critical functions: First if the rod end were to fail, the end would not be able to slip over the retainer bolt. Second, the tapered profile allows the spherical to travel through an extended range without the limitation posed by a simple flat washer. These parts come in sizes that can be used in small linkages and up to large suspension assemblies. The washers are offered in Aluminum, Stainless and Alloy (4130 steel).

Part No	Size	Material
MZSW10A	10-32	4130 Steel
MZSW12A	1/2"	4130 Steel
MZSW14A	1/4"	4130 Steel
MZSW14L	1/4"	6061 Aluminium
MZSW34A	3/4"	4130 Steel
MZSW38A	3/8"	4130 Steel
MZSW51A	5/16"	4130 Steel
MZSW58A	5/8"	4130 Steel
MZSW71A	7/16"	4130 Steel

CLEVIS ENDS

Clevis Ends

Moroso Clevis Ends solve suspension and fastening problems in applications where rod ends would not be practical. They allow adjustment both radially and laterally and place the mounting bolt in a double shear load. Machined from 4130 chrome moly steel and plated with a zinc and yellow chromate finish. Packaged two per card.

Description
1/2"-20 Shank, 5/16" Bolt Holes, 1/4" Slot
5/8"-18 Shank, 3/8" Bolt Holes, 3/8" Slot

ROD ENDS

Rod Ends

Our top quality rod ends are available in a number of sizes and in both right or left hand threads. The all-steel bodies are available in either carbon steel or Chrome Moly. We highly recommend that you use our Chrome Moly Rod Ends exclusively in our 4-Link and Ladder Bar suspension kits.

Description
5/8" Shank x 5/8" Hole, RH Thread, Low Carbon Steel **MOC6009**
5/8" Shank x 5/8" Hole, LH Thread, Low Carbon Steel **MOC6010**
3/4" Shank x 5/8" Hole, RH Thread, HD Chrome Moly **MOC6160**
3/4" Shank x 5/8" Hole, LH Thread, HD Chrome Moly **MOC6161**

FK Bearings rod ends and spherical bearings are used by racers everywhere, in all forms of motorsport. They are available in a huge range of sizes and materials to suit any application. FK Bearings offers self-lubricating Teflon liners on nearly all of our rod ends and spherical bearings. The Teflon liner is chemically bonded to the inner diameter of

the race. The liner offers a very high load carrying capacity and has greatly increased dynamic wear characteristics. The operating temperatures of our liner range from -50° to 160° C. The load limits quoted are Static Radial Ultimate Load which is the load that can be applied to a bearing without fracturing the ball, race, or rod end eye. The ultimate load rating is usually, but not always 1.5 times the limit load. Jam nuts must be purchased separately.

ALUMINIUM TUBE

ALUMINIUM TUBE AND MANDREL BENDS
Aeroflow Performance has introduced a new range of quality universal aluminium bends. Our mandrel bends are premium quality T6063 grade aluminium. Our bends are perfect for intercooler, turbocharger, supercharger and intake pipes. These pipes will not corrode or rust like coated or painted steel pipes and are much lighter than stainless pipes. Aeroflow's aluminium, when welding produces contaminant free beads, for a show quality welding job!
NOTE: LEG SIZES ARE APPROXIMATE AND MAY VARY.

PIPE BEADING TOOL (Large bore)

Great for beading 15.87mm (5/8") pipe and larger for aluminium up to 1.65mm (.065") and stainless steel / steel pipe up to 1.25mm (.050"). Produces a bead that is approx 2mm (5/64") tall and 6.5mm (1/4") wide.
AF98-2017

ALLOY TUBE ENDS

ALUMINIUM TANK ENDS

Aeroflow aluminium tank ends allow making custom tanks a breeze. Simply weld these aluminium ends to your aluminium tubing and add some mounts. Available in a machined 45 degree end or a smooth spun bowl style end, allowing you to create a professional tank. Sizes range from 2.5", 2.75", 3.00", 3.50", 4.0".

MACHINED 45° ALUMINIUM TANK ENDS

DRAIN VALVE

UNIVERSAL DRAIN VALVE

This universal valve with -10 ORB or 3/8" NPT male is suitable for use as a drain plug on various tanks. Exit incorporates a 1/8" NPT female thread for connection of drain tube.

Part No	Material	Thread
AF615-01S	Silver	3/8" NPT Drain valve.
AF615-01BLK	Black	3/8" NPT Drain valve.
AF615-00S	Silver	-10 ORB Drain valve.
AF615-00BLK	Black	-10 ORB Drain valve.
AF615-02BLK	Black	-6ORB Drain Valve
AF615-02S	Silver	-6ORB Drain Valve

ALLOY TUBE CLAMPS

INTERCOOLER ALUMINIUM PIPE CLAMP

Aeroflow's Intercooler Aluminium Pipe Clamps are made from billet 6061-T6 aluminium. It has a double O-ring grooved sleeve offering protection, absolute sealing and flexibility. Easy bolt together design outer ring which is hard anodized for robustness and wear resistance. The clamps are designed for all types of applications including turbo piping, intercooler piping, cold air intakes and custom applications.

DZUS FASTENERS

Large Head Self-Ejecting Fasteners - Black

These number 6 fasteners are now available in black. Used on steel, aluminium, and fiberglass body and interior panels where a more evenly distributed load to avoid pull-through is needed. Use with Spring No. 71400, 71410, 71420, 71425 or 71430, 10 per package.

Large Head Self-Ejecting Fasteners, 7/16" x .500" **M071372**
Large Head Self-Ejecting Fasteners, 7/16" x .550" **M071377**

Self-Ejecting Fasteners 5/16

A necessity for quick pit work in both drag racing, and oval track. Use spring No. 71430 as a replacement. 10 per package.

Self-Ejecting Fasteners, .400" Short Body, Grip Range: .098" to .133"	M071440
Self-Ejecting Fasteners, .450" Short Body, Grip Range: .148" to .183", Butterfly Head	M071440
Self-Ejecting Fasteners, .500" Medium Body, Grip Range: .198" to .233"	M071500
Self-Ejecting Fasteners, .650" Long Body, Grip Range: .348" to .383"	M071530
Butterfly Self-Ejecting Fasteners, .500" Medium Body, Grip Range: .198" to .233"	M071510

Replacement Fastener Springs

Designed for use with Moroso's flat, oval head and butterfly fasteners. 10 per package.

1" Spring, 0.325" High	M071430
1-3/8" Spring, 0.425" High	M071400
1-3/8" Spring, 0.375" High	M071410
1-3/8" Spring, 0.325" High	M071420

Quick Fasteners, Steel

Cadmium plated steel fasteners provide quick fastening of body panels, door, tilt front ends, fiberglass to metal, metal to metal, etc. Available in four lengths and three head styles. Use with Spring No. 71400, 71410, 71420, 71425 or 71430, 10 per package

- Butterfly Head Fastener, 7/16" x .400" Short Body MO71260
 - Butterfly Head Fastener, 7/16" x .450" Short Body MO71270
 - Oval Head Fastener, 7/16 X .450" MO71359
 - Flush Head Fastener, 7/16" x .400" Short Body MO71280
 - Flush Head Fastener, 7/16" x .450" Short Body MO71290
 - Flush Head Fastener, 7/16" x .500" Medium Body MO71300
 - Flush Head Fastener, 7/16" x .550" Long Body MO71310
 - Oval Head Fastener, 7/16" x .500" Medium Body MO71350
 - Oval Head Fastener, 7/16" x .550" Long Body MO71360
 - Oval Head Fastener, 5/16" x .400" MO71340*
 - Oval Head Fastener, 5/16" x .500" MO71345*
 - Oval Head 3/16" Hex Drive Fastener, 7/16" x .500" MO71352
 - Oval Head 3/16" Hex Drive Fastener, 7/16" x .550" MO71362
- * Use with Fastener Spring Nos. 71425 & 71430

Quick Fasteners, Aluminium

Thicker body to handle heavy duty jobs and aluminium for light weight. Slot head style. Use with Spring No. 71400, 71410, 71420, 71425 or 71430. 10 per package.

- Flush Head Fastener, 7/16" X .450" MO71312
- Oval Head Fastener, 7/16 X .450" MO71363
- Flush Head Fastener, 7/16" x .500" MO71301
- Flush Head Fastener, 7/16" x .550" MO71311
- Oval Head Fastener, 7/16" x .500" MO71351
- Oval Head Fastener, 7/16" x .550" MO71361

Large Head Self-Ejecting Fasteners

These number 6 fasteners are in demand by racing's finest chassis builders. Used on steel, aluminium, and fiberglass body and interior panels where a more evenly distributed load to avoid pull-through is needed. Use with Spring No. 71400, 71410, 71420, 71425 or 71430, 10 per package.

- Large Head Self-Ejecting Fasteners, 7/16" x .500" MO71370
- Large Head Self-Ejecting Fasteners, 7/16" x .550" MO71375
- Large Self-Ejecting 3/16" Hex Drive, 7/16" x .500" MO71380
- Large Self-Ejecting 3/16" Hex Drive, 7/16" x .550" MO71382

Reinforcing Plates

Reinforcement plates provide a secure metal backing for long lasting service. Solves the problem of quick release fastener attachment rivets pulling out of fiberglass panels after repeated usage. Also prevents fastener spring brackets from cutting into panels. Use with Quick Fastener Nos. 71280, 71290, 71300, 71310, 71350, or 71360. Ten per package.

- Quick Fastener Reinforcing Plates, .022" Thick MO71490

Large Diameter Reinforcing Plates

Large 1-3/4" diameter aluminium reinforcement plates provide a sure foundation for quick fasteners.

- Use them on thin gauge fiberglass and metal. Ten per package.
- Quick Fastener Reinforcing Plates, .032" thick MO71495

Quick Fastener Mounting Bracket, 7/16"

Steel bracket can be welded or fastened to any member of the car to provide a convenient pop rivet mount for self-ejecting fastener springs. Use with Nos. 71301, 71311, 71351, 71361, 71352, 71362, 71371, 71376, 71380, 71381, 71382, or 71383. Ten per package.

- Quick Fastener Mounting Bracket, .069" thick, accepts 1.375" springs MO71554

Quick Fastener Mounting Brackets, 5/16"

Brackets can be welded or fastened to any member of the car to provide a convenient pop rivet mount for self-ejecting fastener springs.

- Quick Fastener Mounting Bracket, Flat, Steel, 10 per package. Use with 1" springs MO71550
- Quick Fastener Mounting Bracket, Flat, Steel, 10 per package. Use with 1" or 1.375" springs MO71551
- Quick Fastener Mounting Bracket, 90° angle, Steel, 10 per package MO71552
- Quick Fastener Mounting Bracket, 45° angle, use with 1" springs. 10 per package MO71553
- Quick Fastener Mounting Bracket, 90° Angle, Steel Extra Strong. Two per pack, .100" thick MO71555
- Quick Fastener Mounting Bracket, 90° Angle, Aluminium Extra Strong. Two per pack, .100" thick MO71556

Quick Fastener Wrench

This tool fits slot-head 1/4-turn fasteners far better than a screwdriver, reducing the possibility of damaged fasteners and body panels. Manufactured of zinc plated spring steel with three different sized radii to match the slots in various 1/4-turn fasteners. Includes non-slip, plastic hand grip. MO71600

Quick Fastener Wrench With Easy-Grip Handle

Removing and installing 1/4-turn fasteners just got quicker. Features an easy grip handle and redesigned steel shank plated with black zinc for durability. Unlike a screwdriver, the blade is contoured to fit inside the 1/4-turn fastener without stripping the slot. Heavy Duty Quick Fastener Wrench MO71606

QUICK FASTENER TOOL - HEX DRIVE

- Allows for faster removal of 1/4-turn fasteners
 - Features include a high strength steel shank plated with black zinc for durability
- MO71607

Billet Dzus Fastener Tool

Multi-function Dzus tool. Dual head for both size fasteners. Billet black aluminium construction AF98-2012

Measure from the bottom of head to the bottom of spring locking area.

Button length is easily calculated by adding the total material thickness plus the spring height, as shown in the diagram below.

A. Total Material Thickness
B. Spring Height with Deflection
C. Total button length

LARGE DIAMETER HEAD DZUS BUTTONS

Larger diameter gives greater surface coverage of the panel, giving it longer life. Also helps when the hole is opened out, as it will still hold the panel tight. Supplied individually, available in raw or black anodised finish.

PANELFAST TRANSFER STUD PUNCH

Do you have body panels that will not line up perfectly because you tried marking your holes with a quarter fastener spring in the way? Are your fastener holes butchered up and fabricated to help realign your body panel with its weld plate hole? The panel transfer stud punch is a tool you need to make your body hanging experience effortless. No more worrying about if your hole you made where the spring and weld plate are will line up after you have drilled your hole. This tool acts as a regular stud punch you would use to make to hole in. Compared to the a normal stud punch, you simply place the transfer stud punch in a weld plate or body panel and position your panel over top of it and lightly tap the panel with a hammer. After, you will be left with a mark in your panel where you now can confidently drill your hole and not fear that the hole will be off when you realign your panel. They are made of steel in a 5/16" and 7/16" diameters in milled finish. PANELfast is proudly manufactured right here in the USA.

Engine & Accessory Fastener Kits

Everything you need to attach components and accessories from a long block on up is packaged in one economical, convenient kit! The stainless steel is polished to achieve a brilliant luster, and provides a distinctive, maintenance-free environment. Each kit has a dozen different type fasteners, all neatly organized and labeled in protective vacuum-wrapped packages. Both materials are nominally rated at 170,000 psi tensile strength and come in both hex and 12-point heads. Please note that these kits are designed for carbureted engines. Newer EFI applications may require the purchase of additional fasteners.

Each Kit Contains 12 Groups of Fasteners

Including: Intake Manifold Bolts - Valve Cover Bolts - Thermostat Housing Bolts - Alternator Bracket Bolts - Distributor Bracket Bolts - Motor Mount Bolts - Oil Pan Bolts - Coil Bracket Bolts - Header Bolts - Front Cover Bolts - Water Pump Bolts - Fuel Pump Bolts

• Black Oxide Finish 8740 Chrome Moly Steel or Stainless Polished Steel
• Stronger Than Any Hardware Grades • Choice Of Hex or 12-Point Heads

Plain Stainless Steel Bolt Kits

A lower cost alternative to our polished or chrome bolt kits. These plain unpolished stainless steel hex bolt kits are perfect for painting or for engines with a more standard appearance. Engine bolt kits include intake manifold, water neck, valve cover, timing cover, water pump, fuel pump, oil pump and header bolts. Chev kits also include a distributor bolt. Ford Kits are supplied with no water pump bolts and Mopar kits with no water neck bolts. Supplied with washers where applicable.

Special Purpose Washers

A true high performance washer from ARP, available in a variety of sizes and thickness, and with or without I.D. (inside diameter) chamfers. All are constructed from premium chrome moly and are parallel-ground, hardened, and finished in black oxide. Our 3/8" I.D. washers, for example, come in four different sizes (O.D.) and different thicknesses. Special connecting rod washers are available, as are some of the more popular metric sizes. All of the washers are available individually, with most of them also offered in handy 2-piece and 10-piece packages. Build up an inventory of these premium quality washers so you won't get caught short when the need arises.

TITANIUM BOLTS

Aeroflow Performance Titanium 12 Point Head bolts, studs and nuts are machined from 6AL-4V grade 5 Titanium and the small head design is ideal when fitting into a recess or tight areas to give maximum clearance. These titanium bolts are the favored material for a fastener due to the attractive property of being a low-density metal, which has a higher tensile strength than many other materials, even in higher temperatures. Given this strength, titanium is remarkably light. When compared to steel in a strength-to-weight ratio, titanium is far superior, as it is as strong as steel but 45% lighter. In fact, titanium has the highest strength-to-weight ratio of all known metals. The pairing of their high strength to weight ratio, excellent resistance to stress corrosion cracking, high corrosion resistance and good fatigue strength make it the best choice to have in your race car. Each bolt is sold individually and available in a variety of threads and lengths to choose from.

TITANIUM WASHERS

Aeroflow Performance Titanium flat washers are machined from 6AL-4V grade 5 Titanium. These titanium washers are the favored material when using a titanium fastener due to the attractive property of being a low-density metal, which has a higher tensile strength than many other materials, even in higher temperatures. Given this strength, titanium is remarkably light. When compared to steel in a strength-to-weight ratio, titanium is far superior, as it is as strong as steel but 45% lighter. In fact, titanium has the highest strength-to-weight ratio of all known metals. The pairing of their high strength to weight ratio, excellent resistance to stress corrosion cracking, high corrosion resistance and good fatigue strength make it the best choice to have in your race car.

TITANIUM STUD KIT

Aeroflow Performance titanium studs are 45% lighter and stronger than your regular steel stud and nut combo you find at your local bolt shop. The high strength and super lightweight Ti 6AL-4V grade studs are the perfect replacement for turbo manifolds, exhaust headers or intakes. The use of factory OEM bolts and studs they can result in stripped or broken bolts and inadequate clamping force, resulting in leaks. Aeroflow Performance titanium stud and nut combo incorporates a hex key tip that allows them to be easily installed using an Allen wrench. Titanium 12-point nuts and washers are included. Sold in one kit of 1 stud, 1 nut and 1 washer.

AF55-2000	M8 x 1.25mm Stud, Nut, Washer
AF55-2003	M10 x 1.25mm Stud, Nut, Washer
AF55-2004	M10 x 1.50mm Stud, Nut, Washer

HEAD BOLTS & STUDS

AEROFLOW HEAD STUDS

Aeroflow Performance head studs greatly improve your cylinder head-to-block sealing compatibilities. This is important in engines with high power adders such as turbochargers, superchargers or nitrous. They can even be a great addition to a mildly modified build as insurance against failure. All head studs provide a more accurate and consistent torque loading overhead bolts. These head studs are manufactured from aircraft quality 8740 high tensile strength chromoly steel and cold-forged to ensure molecular integrity within the stud. Meaning these studs are rated up to 190,000 psi tensile strength making them stronger than Grade 8 and OEM fasteners. All kits come complete with 12-point nuts and hardened parallel washers for an even load distribution and accurate torque readings.

Chevy Engines

AF37-2000 Small Block Chev 350 Head Stud Kit, 12-point nuts suits 23 Degree OEM and Aftermarket Cylinder Heads
AF37-2010 Big Block Chev 396-454 Head Stud Kit, 12-point nuts suits OEM and Aftermarket Cylinder Heads
AF37-2011 Big Block Chev 396-454 Head Stud Kit, 12-point nuts suits Aeroflow / Edelbrock Performer RPM Cylinder Heads

Ford Engines

AF37-2015 Small Block Ford 289-302 Windsor 7/16" Head Stud Kit, 12-point nuts suits OEM and Aftermarket Cylinder Heads with 7/16" Holes
AF37-2017 Small Block Ford 351 Windsor 1/2" Head Stud Kit, 12-point nuts suits OEM and Aftermarket Cylinder Heads with 1/2" Holes
AF37-2019 Big Block Ford FE 390-428 Head Stud Kit, 12-point nuts suits OEM and Aftermarket Cylinder Heads
AF37-2020 Ford 302-351 Cleveland Head Stud Kit, 12-point nuts suits OEM and Aftermarket Cylinder Heads
AF37-2022 Ford Falcon XR6 Barra (6 Cylinder) Head Stud Kit, 12-point nuts

Chrysler Engines

AF37-2023 Small Block Chrysler 318-360 Head Stud Kit, 12-point nuts suits Aeroflow & Edelbrock Performer Cylinder Heads
AF37-2024 Big Block Chrysler 383-440 Head Stud Kit, 12-point nuts suits Aeroflow & Edelbrock Performer RPM Cylinder Heads

GM LS Engines

AF37-2025 GM LS All Even Head Stud Kit suit 2004 and Later model engines, 12-point nuts suits OEM and Aftermarket Cylinder Heads
AF37-2026 GM LS with Odd Sizes Head Stud Kit suit 2003 and earlier model engines, 12-point nuts suits OEM and Aftermarket Cylinder Heads

Holden Engines

AF37-2029 Holden 253, 304, 308 and Hemi 265 and Ford CrossFlow Head Stud Kit, 12-point nuts suits OEM and Aftermarket Cylinder Heads
AF37-2030 Holden 304, 308 EFI VN-VT Head Stud Kit, 12-point nuts suits OEM and Aftermarket Cylinder Heads

Nissan Engines

AF37-2035 Nissan SR20 M11 Head Stud Kit, 12-point nuts suit Rear Drive Wheel SR20 engines with M11 thread.
AF37-2037 Nissan RB20 and RB25 Head Stud Kit, 12-point nuts suit Nissan Skyline RB Rear Wheel Drive Engines
AF37-2038 Nissan RB26 Head Stud Kit, 12-point nuts suit Nissan Skyline RB26detd All-Wheel Drive Engines
AF37-2039 Nissan RB30 WITH Double Overhead Cam Cylinder Head from RB25 or RB26 Head Stud Kit, 12-point nuts suit Nissan Skyline RB30 All-Wheel Drive or Rear Wheel Drive Engines
AF37-2040 Nissan RB30 WITH Single Overhead Cam Cylinder Head Stud Kit, 12-point nuts suit Nissan Skyline RB30 Rear Wheel Drive Engines with 11mm OEM Thread
AF37-2041 Nissan RB30 WITH Single Overhead Cam Cylinder Head Stud Kit, 12-point nuts suit Nissan Skyline RB30 Rear Wheel Drive Engines with Oversized 1/2" (12.7mm) Thread

Toyota Engines

AF37-2045 Toyota 1JZ and 2JZ Head Stud Kit, 12-point nuts suit Turbo and Non-Turbo Engines

Mitsubishi Engines

AF37-2050 Mitsubishi 4G63 1994 and Later Head Stud Kit, 12-point nuts suit Mitsubishi Evolution with M11 Thread

Subaru Engines

AF37-2055 Subaru EJ20 and EJ25 Head Stud Kit, 12-point nuts suit Subaru Double Overhead Cam EJ engines

1939-1953 Flathead V8 Head Nut & Stud Kit

Performance engine builders know that head studs are superior to bolts, and this is especially the case on Flathead Ford and Mercury V8s. Flathead decks are thin and their threads are easily stripped. By installing studs, you avoid damaging the threads in the block through repeated use. The combination of the studs' fine outer threads and hardened washers also prevents galling and ensures accurate torque readings, particularly on aluminum heads.
RP91015310-39 Head Nut/Stud Kit, 1939-48
RP910-15310L Head Nut/Stud Kit, 1949-53

Cylinder Head Bolts

Mr. Gasket cylinder head bolts compensate for thread length lost when using head bolt washers. These head bolts are made from high-quality Grade 8 alloy steel.

Individual Head & Main Studs

These studs are made from ARP's tough 8740 material and are perfect for use as head studs, mains studs or for any application that requires high strength studs. They have UNC coarse threads on the bottom and UNF fine threads on the top for use with ARP 12-point nuts.

HEAD BOLTS

Aeroflow Performance head bolts greatly improve your cylinder head-to-block sealing compatibilities. This is important in engines with high power adders such as turbochargers, superchargers or nitrous. They can even be a great addition to a mildly modified build as insurance against failure. These head bolts are manufactured from aircraft quality 8740 high tensile strength chromoly steel and cold-forged to ensure molecular integrity within the bolt. Meaning these bolts are rated up to 190,000 psi making them stronger than Grade 8 and OEM fasteners. All kits come complete with hardened parallel washers for an even load distribution and accurate torque readings.

Chevy Engines

AF37-2100 Small Block Chev 350 Head Bolt Kit, 12-point Head Bolt suits 23 Degree OEM and Aftermarket Cylinder Heads
AF37-2110 Big Block Chev 396-454 Head Bolt Kit, 12-point Head Bolt suits 23 Degree OEM and Aftermarket Cylinder Heads
AF37-2111 Big Block Chev 396-454 Head Bolt Kit, 12-point Head Bolt suits Aeroflow / Edelbrock Performer RPM Cylinder Heads

Ford Engines

AF37-2115 Small Block Ford 289-302 Windsor 7/16" Head Bolt Kit, 12-point Head Bolt suits OEM and Aftermarket Cylinder Heads with 7/16" Holes
AF37-2117 Small Block Ford 351 Windsor 1/2" Head Bolt Kit, 12-point Head Bolt suits OEM and Aftermarket Cylinder Heads with 1/2" Holes
AF37-2120 Ford 302-351 Cleveland Head Bolt Kit, 12-point Head Bolt suits OEM and Aftermarket Cylinder Heads

Chrysler Engines

AF37-2123 Small Block Chrysler 318-360 Head Bolt Kit, 12-point Head Bolt suits Aeroflow & Edelbrock Performer Cylinder Heads
AF37-2124 Big Block Chrysler 383-440 Head Bolt Kit, 12-point Head Bolt suits Aeroflow & Edelbrock Performer RPM Cylinder Heads

GM LS Engines

AF37-2125 GM LS All Even Head Bolt Kit suit 2004 and Later model engines, 12-point Head Bolt suits OEM and Aftermarket Cylinder Heads
AF37-2126 GM LS with Odd Sizes Head Bolt Kit suit 2003 and earlier model engines, 12-point Bolt suits OEM and Aftermarket Cylinder Heads

GM LSA Engines

AF37-2129 GM LSA, 12-point Bolt Head suits OEM and Aftermarket Cylinder Heads

Holden Engines

AF37-2130 Holden 253, 304, 308 Head Bolt Kit, 12-point Head Bolt suits OEM and Aftermarket Cylinder Heads

Holden V8 Main Studs

These 2 bolt main stud kits for Holden V8 engines also suit the inner bolts on the Milodon splayed 4-bolt main caps.
Description Part No.
Holden V8 253-308 M181145
Holden V8 253-308 with Windage Tray M181146

MAIN STUDS

Aeroflow Performance main studs are designed to keep your main caps in place and stop them walking and fretting which can lead to engine failure. These studs are preferred over bolts as they allow you to obtain more accurate torque readings. These main studs are manufactured from aircraft quality 8740 high tensile strength chromoly steel and cold-forged to ensure molecular integrity within the stud. Meaning these studs are rated up to 190,000 psi making them stronger than Grade 8 and OEM fasteners. All kits come complete with 12-point nuts and hardened parallel washers for an even load distribution and accurate torque readings.

Chevy Engines

AF37-2200 Small Block Chev 350 Main Stud Kit, 12-point nuts suits 2 Bolt main caps with Large Journal
AF37-2201 Small Block Chev 350 Main Stud Kit, 12-point nuts suits 2 Bolt main caps with Small Journal
AF37-2202 Small Block Chev 350 Main Stud Kit, 12-point nuts suits 4 Bolt main caps with Small Journal
AF37-2210 Big Block Chev 396-454 Main Stud Kit, 12-point nuts suits 2 Bolt main caps
AF37-2211 Big Block Chev 396-454 Main Stud Kit, 12-point nuts suits 4 Bolt main caps

Ford Engines

AF37-2115 Small Block Ford 289-302 Windsor 7/16" Main Stud Kit, 12-point nuts suits 2 Bolt main caps
AF37-2116 Small Block Ford 289-302 Windsor with Girdle 7/16" Main Stud Kit, 12-point nuts suits 2 Bolt main caps (1/2" Longer than AF37-2115 to accommodate girdle)
AF37-2117 Small Block Ford 351 Windsor 1/2" Main Stud Kit, 12-point nuts suits 2 Bolt main caps
AF37-2120 Ford 351 Cleveland Main Stud Kit, 12-point nuts suits 2 Bolt main caps
AF37-2122 Ford Falcon XR6 Barra (6 Cylinder) Main Stud Kit, 12-point nuts suits 2 Bolt main caps

Chrysler Engines

AF37-2223 Small Block Chrysler 318-360 & Big Block Chrysler 383-440 Main Stud Kit, 12-point nuts suits 2 Bolt main caps

GM LS Engines

AF37-2227 GM LS with OE windage tray Main Stud Kit, 12-point nuts suits 4 Bolt main caps

Holden Engines

AF37-2230 Holden 253, 304, 308 Main Stud Kit, 12-point nuts suits 2 Bolt main caps

Nissan Engines

AF37-2235 Nissan SR20 Main Stud Kit, 12-point nuts suits 2 Bolt main caps and Rear Drive Wheel SR20 engines.
AF37-2237 Nissan RB25, RB26, RB30 Main Stud Kit, 12-point nuts suits 2 Bolt main caps

Toyota Engines

AF37-2245 Toyota 1JZ and 2JZ Main Stud Kit, 12-point nuts suits 2 Bolt main caps and Turbo and Non-Turbo Engines

Mitsubishi Engines

AF37-2250 Mitsubishi 4G63 Main Stud Kit, 12-point nuts suits 2 Bolt main caps

Harmonic Balancer Bolt & Washer Kits

Made from Grade 8 alloy material and heat-treated for superior strength, these harmonic balancer bolts feature a high hex head to prevent socket slippage while rotating the engine when degreasing a cam or adjusting the valves. An extra thick, parallel ground washer is provided to allow for a more accurate, uniform torque. Durable zinc dichromate, gold tone finish, complete with split lock washer to prevent loosening caused by vibration.

Chevrolet 283-400 Small Block, 7/16"-20 x 2-1/4" MG945
Chevrolet 396-454 Big Block, 1/2"-20 x 1-1/2" MG946

NOTE: Includes

Chev Harmonic Balancer Bolt

Part No	Colour	Description
AF37-0010	Black	SBC / BBC Balancer Retaining Bolt
AF37-1400	ZINC	SBC / BBC Balancer Retaining Bolt

Balancer Bolt

The thicker 3/4" hex head on this 7/16"-20 x 2-1/4" Balancer Bolt provides a larger contact surface for more positive socket engagement. Manufactured of Grade 8 steel with gold iridite finish.
Balancer Bolt, Small Block Chevy **MO38770**

OIL PAN

Oil Pan

The special smaller-than-standard hex head is ideal for tight spaces. Because of the hex flange head design, it will not fall back into the socket wrench, allowing for easier installation. Special underhead serrations prevent loosening and the wide flange head distributes uniform clamping pressure for an Ultra gasket seal. Bolts are zinc plated, Grade 5.

OIL PAN STUDS

Aeroflow Performance oil pan studs are designed to make installation of your oil pan as easy as it can be. The studs all feature a bullet nose radius on the ends to help locate the pan rail holes, this also allows the nuts to be easily installed without the risk of cross threading. These oil studs are manufactured from aircraft quality 8740 high tensile strength chromoly steel and cold-forged to ensure molecular integrity within the stud. All kits come complete with 12-point nuts and hardened parallel washers for an even load distribution and accurate torque readings.

GM LS OIL PAN STUD KIT

The Aeroflow Performance oil pan stud kit is designed for use with our Aeroflow oil pan for all GM LS series engines. Using these studs makes installing your oil pan a breeze without the hassle of aligning bolts. The serrated faced nuts provide extra grip on the oil pan rail which will prolong the life of the gasket and prevent oil leaks down the line. Studs are made of heat treated Grade 8 steel and zinc plated. This set includes : 13 M8 x 1.00mm (40mm long) studs with matching nuts
2 - M6 x 1.00mm (40mm long) studs with matching nuts
AF82-2050

MITSUBISHI EVOLUTION

The Aeroflow Performance oil pan stud kit is designed for use with our Aeroflow oil pan for the Mitsubishi Evolution 4 to 9 models with the 4G63 engines. Using these studs makes installing your oil pan a breeze without the hassle of aligning bolts. The serrated faced nuts provide extra grip on the oil pan rail which will prolong the life of the gasket and prevent oil leaks down the line. Studs are made of heat-treated Grade 8 steel with zinc plated silver and the nuts are cadmium and zinc plated. This set includes 23 M6x1.00mm (40mm long) studs and matching nuts.

Add part number to page 143
AF82-2051 Mitsubishi Evo oil pan stud kit (Pack of 23)

NISSAN RB20, RB25 & RB30

The Aeroflow Performance oil pan stud kit is designed for use with our Aeroflow oil pan for the Nissan RB20, RB25 and RB30 rear wheel drive models only. Using these studs makes installing your oil pan a breeze without the hassle of aligning bolts. The serrated faced nuts provide extra grip on the oil pan rail which will prolong the life of the gasket and prevent oil leaks down the line. Studs are made of heat-treated Grade 8 steel with zinc plated silver and the nuts are cadmium and zinc plated. This set includes 30 M6x1.00mm (40mm long) studs and matching nuts.

OIL PAN BOLTS

Aeroflow Performance oil pan bolt kits are designed to hold and secure your oil pan and gasket in place without the worry of loosening. Undoubtedly, these oil pan bolts are the most professional method of attaching an oil pan to your engine block. The bolts construction is such that they can be re-used time and time again and provide prolonged gasket life. These oil pan bolts are manufactured from aircraft quality 8740 high tensile strength chromoly steel and cold-forged to ensure molecular integrity within the stud. All bolts feature a small 12-point head and hardened parallel washers for an even load distribution and accurate torque readings.

INTAKE MANIFOLD BOLTS

When installing a new intake manifold it is recommended to upgrade your intake bolts, some standard intake manifold bolts won't work depending on aftermarket intake manifolds. These Aeroflow intake bolts are made from chrome moly 8740 for strength. They are coated in a black oxide finish for protection and long-lasting durability. Each bolt features a compact 12-point head which is ideal for use where space is minimal on most aftermarket intake manifolds compared to the factory bolts with a larger head. Each set includes thick flat washers for optimum clamping pressures to ensure a sure seal.

---	------------

TORQUE CONVERTER BOLTS

Aeroflow Performance torque converter bolts are used to mount the converter to the flex plate when installing your transmission. These bolts can weaken over time and could lead to shearing off leading to expensive converter and transmission damage. These bolts and nuts are manufactured from aircraft quality 8740 high tensile strength chromoly steel and cold-forged to ensure molecular integrity within the stud. Meaning these are rated up to 190,000 psi making them stronger than Grade 8 and OEM fasteners. All bolts feature a 12-point head and hardened parallel washers for an even load distribution and accurate torque readings. We recommend the use of Loctite 262 or similar so they won't come loose over time. These bolts should be torqued down to each manufacturer's specifications.

FLYWHEEL, FLEXPLATE & PRESSURE PLATE BOLTS

FLYWHEEL BOLTS

When installing a new flywheel, it is recommended to replace your flywheel bolts as the old factory ones can fatigue over time. These Aeroflow flywheel bolts are made from chrome moly 8740 for high strength compatibilities. They are black oxide to resist rust and corrosion. We recommend the use of Loctite 262 or similar so they won't come loose over time. These bolts should be torqued down to each manufacturer's specifications.

Intake Manifold Bolt Kits

3/8" diameter, 12-point-headed intake manifold bolts simplify the job of installing and removing many of today's aftermarket intake manifolds designed with extremely tight fastener clearances. Kits are manufactured of Grade 8 steel with gold iridite finish and come complete with close-tolerance washers.

MR GASKET INTAKE MANIFOLD BOLTS

These special Grade 8 intake manifold bolts feature a 12-point smaller-than-standard head and flange, and include special extra thick flat washers for optimum clamping pressures. They're ideal for use where space is minimal, typical on larger runner race manifolds. These bolts and washers are brite zinc plated for protection and good looks.

- Features 12-point Smaller-than-standard Bolt Head
- Thick Flat Washers Distribute Optimum Clamp Load
- Ideal Use Where Space Is Minimal On Race Manifolds
- Bolts & Washers Zinc Plated For Protection

UNIVERSAL TRANSMISSION OIL PAN BOLT KIT

Aeroflow automatic transmission oil pan bolts keep your oil transmission pan in place. These bolts are custom made to exact specifications for a precise fit. Machined from hardened, grade 5 steel and includes a durable black coated finish to enhance the look of your new transmission pan. Each set consists of fourteen 5/16"-18 x 3/4" black hex head bolts with a Phillips head built inside the hex head so ease of installation. The serrated faced head on each bolt provide extra grip on the oil pan rail which will prolong the life of the gasket and prevent oil leaks down the line. Designed for use on Ford, GM and Chrysler transmissions.

AF82-2070 5/16"-18" with 3/4" UHL (14 PACK)

GM 4L60 TRANSMISSION OIL PAN BOLT KIT

Aeroflow automatic transmission oil pan bolts keep your oil transmission pan in place. These bolts are custom made to exact specifications for a precise fit. Machined from hardened, grade 5 steel and includes a durable black coated finish to enhance the look of your new transmission pan. Each set consists of sixteen M6 x 1.00mm black allen key socket cap bolts. Designed for use with our AF72-3008 transmission pan to suit the GM 6L80/6L80E.

AF82-2073

GM 4L60 TRANSMISSION OIL PAN BOLT KIT

Aeroflow automatic transmission oil pan bolts keep your oil transmission pan in place. These bolts are custom made to exact specifications for a precise fit. Machined from hardened, grade 5 steel and includes a durable black coated finish to enhance the look of your new transmission pan. Each set consists of sixteen M6 x 1.00mm black allen key socket cap bolts. Designed for use with our AF72-3007 transmission pan to suit the GM 4L60/4L60E.

AF82-2071

TRIMATIC TRANSMISSION OIL PAN BOLT KIT

Aeroflow automatic transmission oil pan bolts keep your oil transmission pan in place. These bolts are custom made to exact specifications for a precise fit. Machined from hardened, grade 5 steel and includes a durable black coated finish to enhance the look of your new transmission pan. Each set consists of twelve 5/16"-18" black allen key socket cap bolts. Designed for use with our AF72-3005 transmission pan to suit the Holden Trimatic.

FORD 9" RING GEAR BOLTS

The AeroFlow Performance Ford 9" ring gear bolt sets are constructed from durable steel and featured in a black oxide finish. Hex wrench type with a thread pitch of 7/16"-20. We recommend to torque these to 70ft/lb (94 Nm).

They come in three different lengths as listed below.

AF5075-1011	25.4mm (1") UHL pack of 10
AF5075-1010	30.7mm (1-7/32") UHL pack of 10
AF5075-1012	31.5mm (1-1/4") UHL pack of 10

DIFF HOUSING BOLTS & STUDS

Carrier Stud Kit, FORD 9"

Competition Engineering's Carrier Stud Kit is designed for our Fabricated Rear Axle Housings, similar sheet metal housings, or stock-style Ford 9" housings. The heat treated Grade 8 steel studs provide solid mounting points for the centre section differential. Manufactured with splined ends, the press-in studs are pulled through from inside the housing. Includes nuts and copper sealing washers, which are far superior than steel to prevent seepage and leakage. Packaged in sets of 10 studs, nuts, and washers.

MOC9006

AXLE HOUSING T-BOLTS

Ford 9" T-bolt rear end bolt kit has everything you need to mount brake backing plates to your Ford 9" housing. They are made from high strength steel with a thread size of 3/8"-24 and overall length of 1.50" (38.10mm). Included is 8 T-bolts and matching lock nuts to suit.

AF5072-1000 Axle Housing T bolts (Pack of 8 T-bolts & nuts)

DIFF CENTRE HOUSING STUDS

Ford 9" rear end centre carrier studs are manufactured from high strength steel with a thread size of 3/8"-24 and overall length of 1.75" (44.45mm). A knurl size of 0.403" (10.32 mm) studs. This set includes 10 studs only, no nuts/washers are included.

AF5073-1000 Carrier Studs (Pack of 10 studs ONLY)

ROCKER ARM STUDS

AeroFlow Performance rocker arm studs are ideal for competition and street engines. They are designed to keep your rocker arms in place for precise and critical valvetrain adjustment. Made from 8740 chromoly steel and are heat-treated to 180,000 psi tensile strength. They are concentric within .005" total indicator runout thread pitch to thread pitch, this gives you more consistent rocker geometry. With an extra-large radius base, they are more resistant to flex and will provide a more positive seating. IMPORTANT - it is highly advisable to determine what the optimum rocker arm stud length is for your particular application. This is especially true when long pushrods and valves are employed, you should raise the installed height of the rocker arm to compensate for the longer than stock components.

All Rocker arm studs suit Small and Big Block Chevy, Small and Big Block Ford and Holden V8. May also suit other applications. All Rocker Studs are sold as a Pack of 16

AF37-1100	Thread - 7/16"	OAL - 1-3/4" (44.4mm)
AF37-1101	Thread - 3/8"	OAL - 1-57/64" (48mm)

AF37-1105	Thread - 7/16"	OAL - 2-3/32" (53mm)

Sure-Lock Rocker Arm Nuts

Designed to keep the rocker arms positively locked for precise and critical valve train adjustments.

Manufactured from quality grade steel, then heat-treated for extra strength and plated with a durable finish.

Kits include 16 rocker arm nuts with socket head set screws and one hex key wrench.

For Stock Rocker Arms

Chevrolet 283-400 Small Block gold tone finish	.603"	3/8"	MG920

CARBURETTOR FASTENERS

Carburettor Studs

These bright zinc plated studs help prevent stripped out threads in your aluminium intake manifold. They hold the gasket in place and guide the carburetor on too. Available in four lengths, the studs are threaded 5/16"-18 at one end and 5/16"-24 at the opposite end. Each package contains four studs, nuts and washers.

Standard, 1-3/8" length	MG59
Medium, 1-1/2" length	MG60

BLOWER STUDS

BLOWER STUD KITS

Blower stud kits are machined from aerospace-quality 6061-T6 aluminium and are black or silver anodized.

In the event of a severe backfire, these studs will break and allow separation of manifold and blower. This protects engine and blower from unnecessary damage. Kit comes complete with anodized aluminium studs, 12-point, quality steel nuts and hardened steel washers.

Part No	Colour / Description

PROFORM WEDGE-LOCKING HEADER & COLLECTOR BOLTS

Each PROFORM® Grade 8 (or 12.9 Class) Header Bolt is permanently assembled with a set of special washers, when sufficiently torqued, the washers' super hardened external serrated teeth bite into and grip the bottom of the bolt head and the top surface of the header. Bolt-loosening rotational movement is blocked by the wedge-locking action created by the washers' interfacing, matching cams. Vibration that might ordinarily loosen the bolt actually increases the wedge locking tension, keeping the bolt secure. Because this simple wedge-locking method uses tension instead of friction, contact with oil actually facilitates the wedge effect. When changing headers, the header bolts can be untightened with a normal wrench, lubricated, and reused.

HEADER BOLTS

When installing aftermarket exhaust headers you will need new header bolts, factory exhaust manifold bolts won't work as the flange could be thicker or the original bolts could be damaged. These AeroFlow header bolts are made from chrome moly 8740 material for high strength properties. They are coated in a black oxide for protection and long-lasting durability. Each bolt features a compact 12-point head which is ideal for use where space is minimal especially on aftermarket header flanges.

CARBURETTORS

GENUINE STROMBERG

Yes, they're back, even though they never went away. And they're just the same. But better than ever. A brand new carburetor with Stromberg on one side. And a big 97 on the other. And all the other markings too. We started with the original 1930's specifications, consulted with experts over potential improvements, and brought all the best features together into the ultimate 97 carburetor.

- A new, improved early style cast iron base with stock size - not second-best oversize - throttle shaft.
- A big 97 logo, Type 1 bowl casting, pressure-cast in new dies, CNC-machined for a blue-print parts fit with brand new emulsion tubes. No oversize screw threads. No mystery parts from previous rebuilds. No problems.
- Stock Stromberg jetting - 0.045" main jets and a Number 65 power valve.
- A new air horn casting with extra meat around the float bowl lid to help prevent warping (and leaks) if you get a little heavy on the screws. • A new brass float, made in the USA on the original Stromberg dies. • A newly developed no-stick S-Jet inlet valve. • Modern, high-tech, reinforced cellulose/nitrile gaskets. No leaks is a major project target, and these beauties are half the battle won.
- Stainless steel linkage instead of plated mild steel throughout. No needs rust? Not us. Our springs are stainless. So is the accelerator pump rod, the throttle linkage, choke plate, lever and float. • Beautiful investment cast stainless steel throttle and accelerator pump levers.
- The correct pale chrome colour with iridescent highlights, using the original Ford Service Bulletin process. And correct black Parkerized/lacquered bases.

GENUINE ORIGINAL REPRODUCTION STROMBERG 97 CARBURETOR

Part No: STROM9510-A

STROMBERG

BIG97 PRIMARY

The BIG97 Primary features 250cfm airflow with significantly improved fuel circuits, and provides ported vacuum for your modern aftermarket distributor. It can be used on its own, in multiples (with direct or progressive linkage) or as part of the BIG97 Tri-Power.

- All Genuine 97 on the outside
- Totally new on the inside
- BIG 250cfm airflow - 55% more than a regular 97
- New power valve circuits improve fuel conditioning
- New 'early plenum effect' boosts top end power
- Ported distributor vacuum adds mid-range torque
- BIG S-jets accept 5/16in hard line
- Runs out of the box

Stromberg BIG97 Primary STROM9510A-BIG-P

STROMBERG BIG97 SECONDARY

The BIG97 Secondary carburettor is designed ONLY to be used in multiple carburetor systems, connected to a BIG97 Primary with a progressive linkage. BIG97 Secondaries have no power valve or accelerator pump circuits, but keep chokes, idle and transition circuits for steady idle and good low throttle manners. Dummy accelerator pumps retain the classic 97 look.

- All Genuine 97 on the outside
- Totally new on the inside
- BIG 250cfm airflow - 55% more than a regular 97
- New 'early plenum effect' boosts top end power
- BIG S-jets accept 5/16in hard line
- Runs out of the box.
- Use ONLY in multiple carb systems, connected to a Primary with a progressive linkage

Stromberg BIG97 Secondary STROM9510A-BIG-S

STROMBERG BIG97 TRI-POWER

On the outside, it's Genuine 97 all the way. But on the inside, we're talking the ultimate 750cfm hot rod Tri-Power, with new improved fuel circuits, ported distributor vacuum and a whole lot more. Add our progressive linkage and classic 3-into-1 fuel lines and you're looking at old school carburetion with next level performance and drivability.

The pre-packed Tri-Power comes at special pricing compared with buying separate carbs. Add our Small Block Chevy linkage and fuel line and you can save even more!

- BIG 750cfm airflow - 55% more than regular 97s • Signature 97 outside shape - No change!
- New power valve circuits improve fuel conditioning
- New 'early plenum effect' boosts top end power
- Ported distributor vacuum adds mid range torque
- Runs out of the box. Pre-jetted for typical SBC/SBF
- Progressive linkages available with cable throttle and kickdown options

• Classic 3-into-1 fuel line available for SBC

Stromberg BIG97 Tri-Power STROM9510A-BIG-T

STROMBERG TWOSTEP LINKAGE KITS FOR 6X2 AND 4X2 INTAKES

Eight new TwoStep multi-carb linkage kits are now available from Stromberg Carburettor, catering for the ever-growing trend for nostalgia hot rod induction. Designed and manufactured exclusively by Stromberg Carburettor, the range brings a whole new level of quality, efficiency and looks to multi-carb linkages. The new kits include bolt-on solutions for commonly available 6x2 and 4x2 intakes, plus versatile Trim-to-Fit kits covering the full range of vintage induction applications.

- CAD optimized function, plus great looks. No giant 'pillow-block' brackets. The carbs remain the star of the show.
- Supplied pre-assembled. With instructions!
- Unique low-line brackets support the Back-bar shaft in Oilite self-lubricating bushes at four points for zero flex and positive operation.
- Clamped and pinned levers ensure positive grip on the Back-bar, with '3-position' adjustment for leverage and throttle response.
- Stainless steel end stops prevent lateral movement.
- Cool satin finish. Chrome available to special order.
- The current range comprises:

- STROM9260-BB 6x2 Back-bar Kit - Trim-to-Fit
- STROM9260-D 6x2 Direct Linkage Kit - Trim-to-Fit
- STROM9261-BB 6x2 Back-bar Kit - fits Edelbrock X1
- STROM9261-D 6x2 Direct Linkage Kit - fits Edelbrock X1
- STROM9262-BB 6x2 Back-bar Kit - fits Offenhauser Pacesetter 3924
- STROM9262-D 6x2 Direct Linkage Kit - fits Offenhauser Pacesetter 3924
- STROM9270-D 4x2 Direct Linkage Kit - Trim-to-Fit
- STROM9271-D 4x2 Direct Linkage Kit - fits Offenhauser Pacesetter 5024

To match the increasingly popular Stromberg chrome 97 models, chrome versions of all these linkages are available to special order.

PROGRESSIVE LINKAGE KIT

Designed and manufactured exclusively by Stromberg Carburettor, the TwoStep linkage range combines clean, traditional looks with maximum leverage and huge versatility. Each kit comes pre-assembled and installs in just two simple steps, without the need for extended throttle shafts. Our kits are not a 'one size fits all' solution. Different intakes use different carb spacing, so we modelled every kit in 3D CAD and offer different kits for specific intakes. If you're in doubt, simply measure your manifold spacing - throttle shaft to throttle shaft. Check out the following features:

- Progressive kits have opposite threaded rod ends for easy adjustment. Just spin the rod to adjust for the correct lever angles.
- Extended throttle shafts are not required.
- Die-cast zinc SuperLink lever arms. All other parts stainless steel - even the rod ends and lock nuts.

- Every kit comes with two new Stromberg 'Snapback' throttle return springs, which wrap around the end of the throttle shaft. These chemically blacked, stainless steel torsion springs snap the carburetors shut, yet virtually disappear from view.
- TwoStep progressive systems are designed to ensure optimum performance and ensure maximum versatility. The primary lever has three mounting points to change when the secondary carburetors open, and you can pull the front carburetor or push the rear one open to suit individual applications. On the top setting (as supplied), the linkage will start to open the secondary (end) carburetors at around 50% primary (centre) carburetor throttle rotation. Lower holes will open the secondaries sooner.
- Every Stromberg TwoStep linkage kit comes with full instruction
- STROM9246PRO Progressive 3x2 Chev Linkage Kit Suit Edel/Offy Tripower - Chrome
- STROM9246PRO-CHR Progressive 3x2 Chev Linkage Kit Suit Edelbrock, 4-7/8" Carb to Carb
- STROM9251PRO

LINKAGE KITS

Designed and manufactured exclusively by Stromberg Carburetor, the TwoStep linkage range combines clean, traditional looks with maximum leverage. Each kit comes pre-assembled and installs in just two simple steps, without the need for extended throttle shafts. These kits are not a 'one size fits all' solution. Different intakes use different carb spacing, so we modeled every kit in 3D CAD and offer different kits for specific intakes. If you're in doubt, simply measure your manifold spacing - throttle shaft to throttle shaft. Check out the following features:

- Long die-cast zinc SuperLink lever arms. All other parts stainless steel.
- Extended throttle shafts are not required.
- Every kit comes with two new Stromberg 'Snapback' throttle return springs, which wrap around the end of the throttle shaft. These chemically blacked, stainless steel torsion springs snap the carburetors shut, yet virtually disappear from view.
- For a smooth, lightweight look, the swivels are positively fixed by a small e-clip on the back, and the small black set-screws on the front have knurled ends for a strong fix on the stainless rod.
- Every Stromberg TwoStep linkage kit comes with full instruction

Stromberg 2 X 2 Linkage Kit Suit Edelbrock Superdual STROM9244S

Stromberg 3 X 2 Linkage Kit Suit Edelbrock Tripower STROM9245S

Stromberg 3x2 Chev Linkage Kit Suit Edel/Offy Tripower STROM9246S

Stromberg 2 X 2 Linkage Kit Suit Universal STROM9241P

Twostep Linkage. 5-1/2in. Chrome.

A competitively priced, CHROME 3x2 direct carburetor linkage with Stromberg Superlink levers. Use with intake manifolds that put the carburetors 5-1/2 inches apart.

STROM9246S-CHR

Long Lever With Swivel

Designed to match the shorter Superlink lever arms, this longer version comes with a swivel and roll pin STROM9096

Long Lever With Kickdown Arm

Our 9096K long lever with additional auto-trans kickdown capability - a 1/4"-UNF thread at the bottom end takes a Lokar-style kickdown cable end STROM9096K-KD

SUPERLINK THROTTLE LEVER WITH SWIVEL

A new take on the traditional multi-carb linkage arm. Zinc die-cast with a modern H-beam section for strength without excess weight, and a small feature line at the bottom edge for a period feel. The countersunk stainless steel screw matches those on the carb and threads directly into the arm. The stainless steel swivel, secured by a small e-clip on the back, has a cross hole sized for the typical 3/16th diameter linkage rod, secured by a black knurled-tip set screw. STROM9091K

Cable Throttle Bracket

Securely mounted between the carburetor and intake manifold, our Cable Throttle Bracket positions the cable for optimum, bind-free 'pull' on the Stromberg progressive linkage. STROM9136K

STROM29447K Carb blank off plate. Want to keep a carb or two out of action? Slip this thin stainless plate between the carb and gasket. It's shaped to fit the later 1-1 base footprint you find on most '50's and '60's 2-bbl manifolds, but it's smaller so it all but disappears

CHROME GENUINE STROMBERG 97

Yes, they're back, even though they never really went away. And they're just the same, But better than ever. The Genuine Stromberg 97. A brand new carburetor with Stromberg on one side. And a big 97 on the other. Available only from Stromberg Carburetor. And now in a hand-polished, real triple-chrome plated finish!

• Threads and fuel passages retapped and cleaned before assembly. Chromed brass plugs, screws and S-jet, and polished stainless steel linkage and springs.

• Super-accurate pressure die-castings from new dies, CNC-machined for a blue-print parts fit. So no oversize screw threads. No mystery parts from previous rebuilds. No problems.

• An early style cast iron base with stock size - not second-best oversize - throttle shaft. Parkerized and black lacquered just like they used to be.

• A reinforced air horn casting with extra material around the float bowl lid to eliminate warping and leaks.

• Stock original (sea level) Stromberg jetting - 0.045 main jets and a Number 65 power valve.

• 162cfm out of the box (independently verified) measured at 1.5inch Hg (same as they measure 4-bbl carbs).

• A new brass float, made in USA on original Stromberg dies. A specially developed no-stick S-Jet inlet valve.

• Stainless steel linkage throughout. Who needs rust? Not us. Our springs are stainless. So is the accelerator pump rod, the throttle linkage, choke plate, lever and more.

• Beautiful investment cast stainless steel throttle and accelerator pump levers.

• Correct pale chromate zinc treatment using the original Ford Service Bulletin process.

• Original-style riveted throttle and choke shafts.

Chrome Genuine Stromberg 97 STROM9510A-CHR

STROMBERG 97 BASE WITH VACUUM PORT

A new 97 base (throttle body) with specially designed brass fitting to provide ported vacuum advance for your distributor - complete with new throttle shaft, bushes and plates, new kicker and choke lever, idle mixture screws and springs and gaskets. Available only from Stromberg Carburetor, it's the perfect swap-in for your current 97, adding that all-important distributor vacuum port.

- New 97 base with ported vacuum fitting
- Provides ported vacuum for your distributor
- All new and complete with throttle shaft and plates, kicker, choke lever and idle mixture screws.
- One vacuum port required per engine.
- Not compatible with the 1949-53 Ford flathead Loadomatic distributor

Stromberg 97 Base with Vacuum Port

STROM9514-VP

Finned 3 Bolt Carb Block Off Plate

Aluminium polished.
Suit Stromberg 97 & Holley 94
OTB038

LINKAGE BOMB

Build your own pedal to carb rod with these cool stainless steel linkage clips, which fix onto the Stromberg throttle shaft and an early Ford firewall pedal linkage. Also fits most hot rod throttle cable kits and clips on a typical 1/4in throttle ball stud. All threads are 10-32 and left and right versions are available to build your own carb-to-pedal linkage. Comes with a lock nut.

- Throttle linkage clips have never looked better!
- Fits Stromberg throttle ball and Ford pedal linkage
- Fits aftermarket 1/4in throttle ball studs
- Replace that old Ford piece. It springs open every time you accelerate!
- Takes 3/16in rod, threaded to 10-32
- Small flats added for easy tightening

Description
Linkage bomb (Right Hand 10-32 thread)
Linkage bomb (Left Hand 10-32 thread)

Part No.

STROM9164K-L

ROCKET CLIP

Upgrade your throttle cable with the coolest end clip around! With its stainless steel body and black painted end clip, the Stromberg Rocket Clip works with all popular throttle cable kits. But best of all, its an easy way to convert your 97 carb from rod to cable choke. Just add our 9552K-B bracket for the cable outer sleeve. We recommend using a push/pull wire type kit which won't need a return spring. Either way, the knurled set screw will grip the wire for reliable operation.

- Coolest clip ever for choke and throttle cables!
- Fits Stromberg throttle and choke levers
- Fits all popular throttle cable kits.
- Use with 9552K-B choke bracket for easy cable choke conversion
- Works best with wire type push/pull kits
- Matches Stromberg Linkage Bomb clip

Description
Rocket Clip for choke or Throttle Cable

STROM9166K

SUPERSEAT HOSE FITTING - CHROMED

The only brass hose end available with the correct 18 degree seat for Stromberg inlet fittings (original or S-jet). So no leaks and period looks too. Big 9/16" AF hex cost us more to make, but looks right on the hose. Perfect for 5/16" ID hose - but 3/8" ID hose also clamps up great. This piece is chromed the traditional way, of course.

- Only brass hose end available with the correct 18 degree seat
- Chromed the traditional way!
- Fits old Stromberg needle & seat, and new S-jet
- Also fits 9564K-BIG S-jet (standard on BIG 97 carbs)
- Tightens right into S-jet so no ugly threads showing
- Perfect for 5/16in and 3/8in ID hose

STROM9080K-CHR

Stromberg Service Parts

Looking for Genuine Stromberg service parts? We've got 'em. Genuine Stromberg carbs and parts are designed and manufactured to the best available quality. They're great value, too. Always look for the Genuine Stromberg stamp on every part. **Choose your kit** To best match your needs and make ordering easy, we've combined our parts into convenient kits - all at very competitive prices - and split the list between regular service and restoration parts. Most parts also fit Stromberg 40, 48 and 81 carburetors too. Here's the full list of parts available.

NEW PARTS

Stromberg banjo fitting single end - Stainless steel.

How cool are these! For perfect proportions, we make them from big diameter material with a recess lip on each side to hide the gasket and move the bolt head moves closer to the banjo. We kept the wrench surfaces short, knocked the corners off the hex and rounded the bolt head too. They're sized to fit both 5/16inch and 3/8inch hose, with plenty of fuel flow guaranteed.

STROM9082K

Stromberg banjo fitting - double end - Stainless steel. Just as awesome than our single end version. But with two ends for through flow. Remember where you saw them first.

STROM9083K

Premium jet wrench. Stainless steel with knurls for good grip and a CNC milled end for a super fit. Cheaper wrenches have a punched end. This will last a lifetime.

STROM9071K

Superseat hose fitting.

The only one available with the correct 18 degree seat for Stromberg inlet fittings (original or S-jet). So no leaks and period looks too. Big 9/16" AF hex cost us more to make but looks right on the hose. Perfect for 5/16" ID hose - but 3/8" ID hose also clamps up great.

STROM9080K

Banjo Fitting - Single End - Fits Fuel Gauge

All the benefits of our super-popular single-end banjo fitting, but with an 1/8th NPT hole in the end of the banjo bolt to accept your hot rod fuel pressure gauge

STROM9082K-G

Banjo Fitting - Double End - Fits Fuel Gauge

All the benefits of our super-popular double-end banjo fitting, but with an 1/8th NPT hole in the end of the banjo bolt to accept your hot rod fuel pressure gauge.

STROM9083K-G

Banjo Fitting Spacer

If you want to use banjo fittings with your 3x2 progressive linkage, these beautiful, media polished stainless steel spacers are exactly what you need.

STROM9086K

SERVICE PARTS

STROM9590K-81 Get 'em here! Premium Service Kit for Stromberg 81 - Full gasket kit, 'No-stick' S-jet inlet valve, Accelerator pump check valve, 2 idle mixture screws and springs, full 81-size accelerator pump kit, installation sheet and float gauge

STROM9447K Full gasket kit - three main gaskets (non-paper), plus felt gasket for accelerator pump, and ring gaskets for power jet, inlet valve and drain plugs

STROM9447K-5 Bulk gasket kit - as above x 5
STROM69447K Carb to manifold gasket pack. 6 gaskets

STROM9526K-97 Accelerator pump rod for 97 and 81 - stainless steel
STROM9526K-48 Accelerator pump rod for 40 and 48 - stainless steel

PHENOLIC CARBURETOR SPACER

Helping prevent heat transfer between intake and carburetor, our traditionally styled spacer comes with two gaskets - needs extended intake manifold studs (STROM89064-E) for each carb.

- Period correct real phenolic material. Not plastic!
- Helps prevent heat transfer between intake and carburetor.
- Helps starting in hot weather.
- Must be used with Stromberg STROM89067-E Extended intake studs.
- Fits all 3-bolt 2-bbl carbs inc Holley and Edelbrock 94.

STROM39447K

EXTENDED INTAKE MANIFOLD STUD KIT

Fitting some Stromberg Phenolic spacers (39447K)? Then you will need these 1/4in extended intake manifold studs. Comes with stainless nuts and lock washers, of course. (3 piece)

STROM89067-E

STROM31095K Body screw kit - 8 screws/washers - stainless steel

STROM89067K-3 Manifold stud kit. 3 studs with stainless lock washers and nuts

STROM89067K-4 Manifold stud kit. 4 studs with stainless lock washers and nuts

THROTTLE SHAFT

EXTENSION KIT

Extending the Stromberg 97 throttle shaft for difficult linkage applications, this kit comes with a support bracket for reliable linkage operation. It's designed for narrow spaced 4x2 and 6x2 intakes where all of the carburetors must be linked on one side - like the Weiland WC4D, Edelbrock CD-694 and supercharger adapter plates.

- Extends the 97 throttle shaft 3-3/4" for difficult linkage applications
- Stainless steel construction resists twist
- Support bracket ensures reliable linkage movement
- PTFE-lined support bush for smooth throttle action
- Perfect for Weiland WC4D (small block Chevy) & Edelbrock CD-694 (early Cadillac) intakes. Blower plates too!

STROM9139K

BIG BORE STAINLESS FUEL LINE

Our classic stainless steel 3-into-1 fuel line (Big Bore 5/16in OD) for Small Block Chevy 3x2 intakes, combines super-clean looks with simple TwoStep installation. Designed and manufactured exclusively by Stromberg Carburetor, each kit is supplied ready to install, complete with special 5/16in Ford Nut compression fittings into the carburetor. Check out the features!

Note: Use STROM9564K-BIG Stromberg S-jets
Stromberg Big Bore fuel lines must be used with Stromberg 9564K-BIG S-jet inlet valves. Fitted as standard on Stromberg BIG 97s, they are specially designed to take 5/16in OD stainless steel line. If you have regular Stromberg 97 carburetors, you MUST update to 9564K-BIG S-jets.

SB Chev 3X2 Fuel Line Kit **STROM9146-BIG**

HARD LINE ADAPTER

If you want to fit a 5/16in OD hard fuel line into a 1/4NPT fuel block, this is the fitting you need - perfect for the Stromberg 9146-BIG 3x2 line for Small Block Chevy.

1/4" NPT to 5/16" Adapter **STROM9180K**

GASKET KIT

Stromberg 97 full gasket kits, with five whole kits in one

STROM9447K-5

CHOKE LEVER DETENT & SPRING

97 and 81 models have this small pin which presses against the choke lever to provide a positive stop when the choke is off. 48 and 40 models don't use one. Comes with a new spring - all stainless steel.

STROM9537K

S-JET INLET VALVE

A specially designed S-jet inlet valve for use with 5/16in OD Stromberg Big Bore fuel lines - eg 9146-BIG 3x2 line for Small Block Chevy (standard 97 carburetors only accept 1/4in line). Also accepts regular 9080K Stromberg SuperSeat hose fitting.

- Specially designed S-jet inlet for 5/16in hard line (regular Stromberg 97s only take 1/4in line)
- Must be used on regular Stromberg 97s with 9146-BIG 3x2 fuel line for Small Block Chevy
- Accepts regular Stromberg 9080K SuperSeat hose fitting
- A 'next generation' needle and seat valve
- Designed to eject dirt particles and improve high speed running

STROM9564K-BIG

STROM9590K-97 Premium Service Kit kit for Stromberg 97, 48 and 40 - Full gasket kit, 'No-stick' S-jet inlet valve, Accelerator pump check valve, 2 idle mixture screws and springs, Full accelerator pump kit, Installation sheet and float gauge

STROM9533K-size Main jets - pair - all sizes available
STROM9534K Emulsion tubes - pair
STROM9541K Idle adjusting screws & springs - pair
STROM9542K Idle jets - pair
STROM9558K Float pin
STROM9563K Bowl plug gaskets (pack of 10)

STROM9564K Fuel inlet S-jet with gasket
STROM9573K Accelerator pump check valve
STROM9586K Throttle/choke plate screw kit - pack of 10

STROM9594K-size Power by-pass jet with gasket - all sizes available
STROM9630K Accelerator pump kit inc. springs/retainers/washers/felt gasket/cotter pin

STROMBERG 97 FORD NUT Fits Stromberg 97, 81, 48 & 40
STROM9081K
STROM9154K Stromberg Return Springs Snapback Suit Multi Carb Setup

STROM9630K-81 Accelerator pump kit for the Stromberg 81. Talk about original. Our 81 pump has a correct 10-finger brass spring washer beneath a leather seal. Kit includes two springs/retainer/washers/felt gasket - even a cotter pin

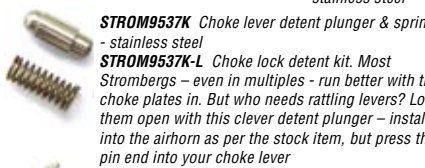

STROM9631K-81 Accelerator pump for the Stromberg 81. What a beauty - with correct 10-finger brass spring washer beneath a leather seal.
STROM9631K Accelerator pump - stainless steel rod

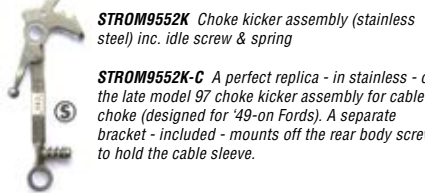

RESTORATION PARTS

STROM9522K Bowl plug kit - all 3 plugs with gaskets
STROM9523K Bowl gallery plugs (pack of 20)
STROM9531K Accelerator pump lever, spring & cotter pin - stainless steel

STROM9537K Choke lever detent plunger & spring - stainless steel
STROM9537K-L Choke lock detent kit. Most Strombergs - even in multiples - run better with the choke plates in. But who needs rattling levers? Look them open with this clever detent plunger - install into the airhorn as per the stock item, but press the pin end into your choke lever

STROM9552K Choke kicker assembly (stainless steel) inc. idle screw & spring
STROM9552K-C A perfect replica - in stainless - of the late model 97 choke kicker assembly for cable choke (designed for '49-on Fords). A separate bracket - included - mounts off the rear body screw to hold the cable sleeve.

STROM9546K Choke shaft kit inc. lever, washer, screw & end stud
STROM9549K Choke plate kit inc. screws - stainless steel plate with correct 15 deg edge
STROM9550K Brass float. Made on the original Stromberg vendor tooling. And supplied with a new float pin.

STROM9571K Spring kit - all exterior springs - all stainless except idle adjuster springs
STROM9577K Accelerator pump discharge jet plus collar - pair
STROM9581K Throttle shaft and lever kit inc. screws & bushes - stock size

STROM9585K Throttle plate - 7 degree edge - pair
STROM9589K Throttle stop screw & spring - stainless steel
STROM9592K Choke & accelerator pump lever fulcrum screws both stainless steel

EDELBRÖCK AVS2 SERIES CARBURETTORS

The AVS2 Series is the next generation in Edelbrock carburetors. The AVS2 features annular flow primary boosters with a new calibration for improved off idle and cruising performance. The annular flow booster design delivers improved fuel atomization to eliminate flat spots that may be encountered when the carburettor transitions from idle to full throttle. Each annular booster features eight, equally spaced orifices to improve fuel metering from idle to the main. The improved flow metering makes this carburettor ideal for use with a wide variety of small-block and big-block engines with either dual- or single-plane intake manifolds. The AVS2 includes both timed and full vacuum ports for ignition advance. ED1901 & ED1902 calibrated for single carburettor application.

Description
500 cfm, Square-Flange, Electric Choke (non-EGR) Part No. ED1901
500 cfm, Square-Flange, Manual Choke (non-EGR) ED1902
650 cfm, Square-Flange, Manual Choke (non-EGR) ED1905
650 cfm, Square-Flange, Electric Choke (non-EGR) ED1906

THUNDER SERIES AVS CARBURETTORS

The next step up from our Performer Series Carburetors is our Thunder Series AVS. Primary and secondary booster clusters offer the most accurate and up-to-date calibration available for today's fuels and octane levels. The Thunder Series' unique Qwik-Tune Secondary Air Valve allows for limitless calibration of the secondary circuit with simple hand tools while on your vehicle. They are available with either manual or electric choke in sizes of 500, 600, and 800 cfm.

• Easily Adjustable Air Valve Secondary
 • No Power Valves To Blow Out • Square Flange Bolt Pattern
Description
500 CFM, Electric Choke ASV Part No. ED1803
500 CFM, Electric Choke ASV (EnduraShine) ED18034
500 CFM, Manual Choke ASV ED1804

650 CFM, Manual Choke ED1805
650 CFM, Manual Choke (Offroad) ED1825
800 CFM, Electric Choke ED1813
800 CFM, Manual Choke ED1812
650 CFM, Manual Choke (EnduraShine) ED18054
650 CFM, Electric Choke (EnduraShine) ED18064
800 CFM, Electric Choke (EnduraShine) ED18134

PERFORMER SERIES CARBURETTORS

The original Edelbrock carburettor design is still available and offers affordable performance for hundreds of applications. Whether you need to replace an aging "stocker" or are looking for a performance carb to top your "hot rod", the Edelbrock Performer Series carbs are the best choice for performance and value. They are available with either manual or electric choke in sizes of 500, 600, 750 and 800 cfm.

• Edelbrock Carburetors bolt on and run right out of the box
 • No Power Valves to Blow Out
 • Square Flange Bolt Pattern
Description
500 CFM, Electric Choke Part No. ED1403
500 CFM, Manual Choke ED1404
600 CFM, Manual Choke Endura shine ED14054
600 CFM, Manual Choke ED1405
750 CFM, Electric Choke ED1411
750 CFM, Manual Choke ED1407
800 CFM, Electric Choke ED1412
800 CFM, Manual Choke ED1413

DUAL CARB & MANIFOLD KITS

These Dual-Quad Kits offer the include the new Edelbrock RPM Air-Gap Dual-Quad intake manifold and two 500 cfm Thunder Series AVS carburetors calibrated specifically for dual-quad applications. These kits also include our high-tech progressive throttle linkage, Russell fuel line and intake gaskets. The RPM Air-Gap manifold and Thunder Series carbs feature our high-tech EnduraShine chrome-like finish for show quality looks that last.

• Hi Tech EnduraShine Finish • Supplied with Fuel Line & Linkage
 • Specially Calibrated Dual Quad Carbs
Application
 Chev Small Block 1955-86 Part No. ED20254
 Chev Small Block Vortec ED20264
 Chev Big Block ED20654
 Ford 289-302 Windsor ED20354
 Ford 351 Windsor ED20854
 Ford FE BBF 390-428 ED20364

MARINE CARBURETTORS

For use in marine applications, these Edelbrock carbs comply with U.S. Coast Guard safety standards. Cast surfaces are iridized with Teflon-coated shafts and pump arm for maximum protection. Other features include modified bowl venting, specially designed throttle levers, accelerator pump seal, tube in air horn for fuel pump vent, universal throttle lever and revised secondaries for improved transient performance.

Note: These carbs have no vacuum ports and are not for automotive use.
 • Edelbrock Carburetors bolt on and run right out of the box
 • No Power Valves to Blow Out
 • Square Flange Bolt Pattern
Description
600 CFM, Electric Choke, Marine Part No. ED1409
750 CFM, Electric Choke, Marine ED1410

2-BARREL STREET CARBURETTORS

Stock performance replacement for 2-bbl street applications. Also mandated carbs for some oval track racing sanctioning bodies.

• Power Valve Blow Out Protection
 • Center Hung Float Bowls • Manual Choke
 • Ford A/T Kickdown
 • 30cc Acc Pump on 350cfm • 50cc Acc Pump on 500cfm
Description Part No.
350 CFM Two Barrel H00-7448
500 CFM Two Barrel H00-4412C

2-BARREL RACING CARBURETTORS

Intended for short circle track racing Sizes of throttle bore, venturi, booster diameter, throttle plate thickness and throttle shaft diameter have not changed. They comply and are fully consistent with the technical gauging now in use. Venturi casting rings are reamed to legal dimensions, for more consistent air flow.

- No Choke • Adjustable Air Bleeds • Centre Hung Float Bowls
- Power Valve Blow Out Protection • 30cc Acc Pump

Description	Part No.
350 CFM Two Barrel	H00-80787-1

4-BARREL RACING CARBURETTORS

These traditional Holley racing carbs feature competition fuel curves which provide safe and reliable horsepower for high performance race engines

- No Choke • 4-Corner Idle
- Centre Hung Float Bowls
- Power Valve Blow Out Protection
- Square Bore Bolt Pattern

Description	Part No.
660 CFM Centre Squirter	H00-4224
750 CFM Double Pumper	H00-9379
830 CFM Double Pumper	H00-9381
850 CFM Double Pumper	H00-9380

4-BARREL VACUUM

SECONDARY CARBURETTORS

Developed for the budget minded enthusiasts, these traditional Holley Carbs are calibrated for use on stock to mildly modified engines.

- Available In Classic or Shiny Finish
- Ford A/T Kickdown on Some Models
- Manual or Electric Choke
- Power Valve Blow Out Protection
- Square Bore Bolt Pattern (Except 80555C)

Description	Classic	Shiny
390 CFM, Square Bowl, Elect. Choke	H00-8007	-
465 CFM, Square Bowl, Hot Air Choke	H00-1848-1	-

MECHANICAL SECONDARY CARBURETTOR

This 450 cfm mechanical secondary carburettor is perfect for small engines and street tunnel ram set ups. It features a single accelerator pump and compact design allowing it to fit inline on most applications.

- Model 4160 with classic finish
- Mechanical secondaries
- Single accelerator pump
- Single feed fuel inlet
- No choke

450 CFM Mechanical Secondary	H00-9776
-------------------------------------	-----------------

ALL-ALUMINIUM TRADITIONAL CARBS

Holley is pleased to introduce four new all-aluminium versions of our most popular Traditional Carburettors! The new 0-80458SA carburettor is a 600 CFM vacuum secondary carb with dual inlet V-bowls and electric choke. It has all of the same great features as the popular Holley 0-80457SA carburettor with the exception of having dual inlet V-bowls. It was designed for enthusiasts with a mildly built engine and a desire for a racy dual inlet look, but who only need a 600 CFM carburettor. Holley's new 0-3310SA is constructed from all-aluminium and has all the same great features of the original 0-3310 that was chosen by Hot Rod Magazine as one of the inaugural inductees into their Speed Parts Hall of Fame!

The all-new 0-80508SA mimics the original 0-80508 750 CFM electric choke carburettor, but is constructed of Aluminium. The new 0-80459SA is a 750 CFM carburettor with vacuum secondaries and square bowls for enthusiasts who want the simplicity of a single inlet or might need a 2x4 set up that requires 750 CFM carbs.

Compared to their zinc counterparts, these new aluminium carbs offer a weight savings of 40%! They will hold their shine longer and can be hand polished for a custom look! All feature vacuum secondaries making them perfect for a wide range of vehicles, and all of these carbs are priced for budget-minded enthusiasts!

- Features:**
- Vacuum secondaries allow use on wide variety of vehicles
 - Electric choke for easy warm up (all except 0-3310SA which is manual choke)
 - Ford A/T kickdown, (does not work with A.O.D. transmissions)
 - 1 timed (spark) port, 1 full vacuum, and 1 PCV port
 - Performance upgrade for stock to mildly modified vehicles
 - Universal calibration for easy bolt-on performance
 - Clear fuel level sight glasses (all except 0-80459SA)
 - Great for 2x4 setups where a larger CFM is needed (0-80459SA only)
 - Adjustable needle & seats (float level)
 - Universal Polished Aluminium

Description	Part No.
1160 750 (v-bowl)	H00-3310SA
1160 600 (v-bowl)	H00-80458SA
1160 750CFM (square bowl)	H00-80459SA
1160 750CFM (v-bowl)	H00-80508SA

MARINE VAC SECONDARY

These Model 4160 marine carburetors include all of the same features as their street cousins--plus a few more that make them adaptable and legal for marine use. Primary differences include fuel bowl vent tubes, sealed throttle shafts, and universal marine calibration. Plus, they're designed to meet flooding and backfire requirements as defined by the U.S. Coast Guard. Other than that, they're typical Holley quality all the way, with a square bore flange, vacuum secondaries, single or dual fuel inlets, an electric or manual choke, 30cc accelerator pumps, and a 5 in. airhorn (unless noted otherwise). And last but not least, you can choose between universal or direct fit OE replacement versions.

600 CFM Marine Vac Secondary Elect Choke	H00-80318-1
---	--------------------

BLOWER CARBURETTORS

Designed and calibrated for roots supercharged engines. Manifold referenced power valve tells the carburettor when to add additional fuel based on the engine's need - eliminating the need to block off the power valve and raise jetting to falsely compensate.

- Model 4150 with shiny finish
- Manual choke
- Mechanical secondary
- Boost referenced power valve

Description	Part No.
600 CFM, SBC, 2x4bbl, 6-71 series supercharger	H00-80592S
700 CFM, SBC 1x4bbl, 140 series supercharger	H00-80572S
750 CFM, SBC 1x4bbl, 170 series supercharger	H00-80573S

SPREAD BORE DOUBLE PUMPER CARBURETTOR

The spread bore double pumper is designed as a performance upgrade replacement for Quadrajet carburetors in GM applications. It is an emissions legal replacement for 1966-1970 Chev small blocks and can also be used in many other applications.

- Mechanical secondaries
- Single feed fuel inlet • Divorced choke
- Dual accelerator pumps • All emissions provisions

650 CFM Spread Bore Double Pumper	H00-6210
--	-----------------

STREET HP CARBURETTORS

The Street HP series carbs feature the Famous HP main body with Street/Strip metering. These are the best value competition style carbs for tough street & strip vehicles.

- No Choke • Adjustable Air Bleeds
- Centre Hung Float Bowls
- Power Valve Blow Out Protection
- Shiny Finish in Zinc • Square Bore Bolt Pattern
- Ford A/T Kickdown

Description	Part No.
650 CFM Double Pumper	H00-82651
750 CFM Vacuum Secondary	H00-82750
750 CFM Double Pumper	H00-82751
850 CFM Double Pumper	H00-82851
950 CFM Double Pumper	H00-82951

HP SERIES BLOWER CARBURETTORS

Designed and calibrated for roots supercharged engines. Manifold referenced power valve tells the carburettor when to add additional fuel based on the engine's need - eliminating the need to block off the power valve and raise jetting to falsely compensate.

- Model 4150HP with shiny finish • No choke
- Mechanical secondary • Boost referenced power valve
- Replaceable air bleeds • Four-corner idle system
- Throttle lever cut off for clearance on sideways applications

Description	Part No.
600 CFM HP Blower carburettor	H00-80575
600 CFM HP Blower carburettor shiny	H00-80575S
750 CFM HP Blower carburettor shiny	H00-80576S
950 CFM HP Blower carburettor shiny	H00-80577S

HP SERIES CARBURETTORS

Performance calibrated and race ready out of the box, Holley HP Series carbs have become the standard in race carburetors.

- Adjustable Air Bleeds
- Centre Hung Float Bowls
- Power Valve Blow Out Protection
- Notched Floats & Jet Extensions • Square Bore Bolt Pattern
- 4-Corner Idle • No Choke

Description	Part No.

LO-RIDER AVENGER CARBURETTOR

If you've got a slammed ride and like to drop it like it's hot, has Holley got a carb for you! Holley's Low-Rider Avenger carburetors have an exclusive No Trouble design metering block and vent tube to prevent hesitation, stalling and fuel flooding at extreme angles, nose up, nose down, and side to side maneuvers.

They also feature a No Trouble choke that ensures great cold starting. Their externally adjustable, No Trouble spring loaded needle and seats promote stable fuel levels for improved fuel control under all conditions. H.V.S. Annular Boosters provide an ultra High Vacuum Signal for incredible low and mid range throttle response and torque. Built in fuel inlet filter and Viton transfer tube seals ensure leak-proof no trouble operation. These carbs also feature chrome fuel bowls with side-hung floats to provide precise fuel control and maintain the classic Holley look. To top it all off, the Low-Rider Avenger carbs have a vibratory polished finish with gold dichromate hardware for a blingin' look.

BRAWLER SERIES CARBURETTORS

Brawler carburetors are precision machined and hand-assembled by craftsman right here in the USA. The Brawler family of carburetors include models for your daily driver to your race car. These carburetors work hard just as their name implies- just raw bare knuckled performance that you can rely on. Don't let the budget-friendly price fool you, the Brawler development focused on the performance you want and not the pretty box that it comes in. Brawlers come with the latest technology in air/fuel calibrations for today's street or race engine demands. The Brawler family of carburetors are all made from light-weight aluminium components and are available in both vacuum and mechanical secondary models. They offer all the tunability that you would find from more expensive carburetors in the market, including four-corner idle adjustment on all models.

HOLLEY ALUMINIUM

ULTRA XP CARBURETOR

Xtreme Performance - Holley Ultra XP carburetors! Ultra XP carbs are 38% lighter than our original HP, have fuel capacity that is 20% greater and 30 other new features! They're available in our all-new Hard Core Gray hard coat anodized finish with Black billet for improved corrosion protection. They're also available in natural tumble-polished aluminium with your choice of Black or Red metering blocks and base plate. The Aluminium Ultra XP comes in 600, 650, 750, 850, and True 950-CFM. Holley Ultra XP carburetors offer new features such as an integrated idle bypass valve that allows for idle adjustments while maintaining the correct throttle plate to transfer slot relationship, high capacity fuel bowls which feature 20% more fuel capacity to eliminate starvation, integrated fuel shelf to minimize fuel aeration and internal baffling to control fuel slosh. Other features include all aluminium construction, fully tunable billet metering blocks, billet base plate, adjustable secondary linkage and knurled (hand adjustable) curb idle screws. Holley Ultra XP carburetors are the ultimate in square bore race carburetors!

E85 4150 ULTRA HP

ALUMINIUM CARBURETOR

More and more racers are using E85 as a cheap alternative to race gas and now Holley has raised the bar on E85 race carbs! Our popular 4150 Ultra HPs are now available with components and calibrations making them ready for ethanol. They're available in 600, 650, 750, 850 and 950 CFM and all come in our exclusive Hard Core Gray hard-anodized finish - the perfect barrier to the corrosive properties of ethanol fuels. Requires 9.75"-inch spread fuel line.

- 100% Holley - Made in the U.S.A.
- 97% aluminium construction
- 20% more fuel bowl capacity
- 10 new base plate features
- 5 new main-body features
- 38% weight savings
- 10 new fuel bowl features
- 6 new metering block features
- 1 new carburetor...Ultra HP

Aluminum Marine Avenger Carburetors

Building on the proven performance and durability of the Aluminum Street Avenger Series- we have engineered the new marine models to continue that performance heritage that Holley is known for. The all-aluminum carburetors are hard coat anodized in a black finish to protect them from corrosion in fresh water or salt water conditions. The new Marine Avengers are built to exceed the Coast Guard standards and are J1223 Marine Standard certified. So, if you are hitting the lake for an easy cruise or some high speed fun, the new Aluminum Marine Avengers will meet and exceed your performance demands!

- All aluminium construction
- Black hard coat anodized finish for corrosion protection in marine environments
- Built to exceed Coast Guard standards and are J1223 Marine Standard Certified
- Dual metering block system utilizing four corner idle adjustment for precision tuning
- Throttle shafts are PTFE coated for corrosion protection
- Available in 570 CFM, 670 CFM, and 770 CFM sizes to match your application needs
- Calibrated to compensate for unique engine loads found on boats
- Electric Choke Vacuum Secondaries

LIGHTWEIGHT ALUMINIUM DOMINATOR

The new Ultra Dominators feature all aluminium construction which saves 3.8lbs of the top of the engine.

The Ultra Dominators feature 6061-T6 billet metering blocks with changeable emulsion, idle feed, and power valve restrictions, a fully hand polished top and venturi for maximum airflow and less air turbulence. Teflon coated slabbbed throttle shafts with low profile, button head screws mated to lightweight anodized aluminium throttle plates improve airflow. Fully adjustable external linkage provides 1:1, progressive, or soft progressive throttle activation, 12 hole anodized billet booster inserts for superior fuel atomization, and aluminium dual inlet fuel bowls with built in clear sight glasses are just a few of the features on the new Ultra Dominator.

- All Aluminium • Designed for use Drag race or Pro Street engines
- Dual 50cc accelerator pumps • 3 Circuit Metering • 4 corner idle
- Calibrated for Gasoline • Dual fuel inlets • Screw in air bleeds
- Fully adjustable external linkage • 12 Hole Annular Boosters w/ billet insert • Aluminium throttle plates • Fully adjustable billet metering blocks • HP fuel bowl with 20% more capacity
- New calibration • Casting is hard coat anodized for ultimate corrosion

Ultra

Dominator Carburetors

Ultra Dominators Carburetors feature all aluminium construction and are equipped with 6061-T6 billet metering blocks with changeable emulsion, idle feed, and power valve restrictions and a fully hand polished top and venturi for maximum airflow and less air turbulence. The clean, polished look coupled with Red, or Blackmetering blocks, booster inserts and throttle plates will certainly set your ride apart whether you are at a show or the track.

- All aluminium construction saves 3.8 lbs • Designed for use on Drag race engines • Interchangeable emulsion, idle feed & PVC
- Built in fuel level sight windows • Hand polished top and venturi inlet • Tumble polished main body and fuel bowls • Slabbbed throttle shafts • All linkage is external, no parts under the carburetor • 12 Hole billet booster inserts • 4 corner idle

GEN 3 ULTRA DOMINATOR

The original Dominator took carburetion to another level in 1969 when it was developed for NASCAR racing. It has been refined over the years and is now receiving its biggest change ever. Introducing the ALL NEW Gen 3 Ultra Dominator! The Gen 3 features a brand new main-body, brand new state-of-the-art calibrations, high volume HP fuel bowls and sizes up to 1475 CFM! The new patent pending GEN 3 main-body is 5/16" taller than the previous generation! This new height allowed for larger radius air entries which were optimized using Computational Fluid Dynamics (CFD) software to deliver smoother flow into new fully machined, big bore venturi.

- For 1 x 4 Carburetor Set-up (2-Circuit Metering)
- 1.690" venturi, 2.00" throttle bore, skirted booster
- All new calibrations optimized for today's larger engines and new fuels
- Fully machined from venturi throat to throttle bore for predictable & repeatable performance
- Designed for use on Drag race, Pro Street, or any high horsepower engines
- All aluminum construction saves 3.8lbs. over original models (28% weight savings)
- Hard Core Gray™ finish is the ultimate in corrosion resistance & hard core looks!
- Integrated idle bypass valve allows for adjustment of idle while maintaining correct throttle plate to transfer slot relationship
- Factory ready TPS mounting points for use with data acquisition systems (Holley TPS P/N 534-214 available)
- Fully adjustable stainless steel external linkage can be adjusted for 1:1 progressive, or soft progressive throttle activation. No linkage parts under the carburetor
- 12 hole billet booster inserts for superior atomization and crisp throttle response
- Knurled (hand adjustable) primary and secondary curb idle screws allow for easy idle adjustment without the use of tools
- Contoured hex head squirter screws for streamlined airflow
- Dual 50cc accelerator pumps
- New modified skirt boosters on 1350 & 1475 maintains strong fuel signal on large CFM carbs

PROFORM STREET

SERIES CARBURETTOR

PROFORM's new Street Series Carburetors are hand assembled in the U.S. Based on the wildly successful Race Series carburetors the new PROFORM street carburetors. Constructed of lightweight aluminium, changeable idle air bleeds for easy non-permanent calibration changes if needed. Fine tuning is accomplished by simply changing air bleeds not opening calibration restrictions with a drill bit. Each street carburetor features billet metering blocks with a street performance calibration developed for today's high-performance engines. Four corner idle on mechanical secondary carburetor to help fine tune the idle with aggressive camshaft profile. Changeable idle feed restrictions expand the idle adjustment capabilities.

750 CFM Vacuum Secondaries Street Carburetor, Elec Choke **PR67213**

PR67201

PROFORM RACE SERIES CARBURETTORS

Finally, an affordable high-performance race carburetor! PROFORM's new Race Series Carburetor is hand assembled in the U.S. utilizing the PROFORM High-Flow Carburetor Main Body, durable billet metering blocks, and a high-performance billet throttle baseplate. The PROFORM Race Series Carb includes: PROFORM Carburetor Main Body, High-Flow Aluminium Main Body! Dyno-Proven Horsepower and Torque Gain! Adjustable, Screw-In Air Bleeds, Maximum Air Flow: No Air Horn, Choke Tower, or Choke Control!, High-Rate Air-Flow Section Design!, Uses standard service and tuning components! PROFORM Billet Throttle Base Plates!., Adjustable Secondary Air Flow Cam Bracket! Solid Billet Construction! Manufactured in the U.S.A.! Timed and Full Vacuum Tubes for Accessories and Tuning!, Button Torx Head Throttle Plate Screws!, Power Valve Blow Out Protection!, Slip Link Mechanical Secondary Linkage!, Serviceable Throttle Levers! PROFORM Billet Metering Blocks, Solid Billet Construction!, Durable, No Warping or Porosity Problems!, Changeable Idle Feed Restriction!, Manufactured in the U.S.A.! PROFORM Aluminium Fuel Bowls, Lightweight Aluminium, Sight Glass Windows for easy float adjustment!

CARBURETOR PARTS & ACCESSORIES

FUEL FLOAT BOWL

KIT WITH SIGHT GLASS

Lightweight aluminium center-hung fuel bowls with sight glass windows for easy visual float adjustment. Kit comes with two (2) fuel bowls and two (2) gaskets and anodized aluminium 5/8" x 18 inverted flare fuel inlets. Fits PROFORM, Quick Fuel, and Holley Double-Pumper carburetors.

- Center-Hung Float Model with Sight Glass
- Fits PROFORM/Quick Fuel/Holley® 4150 Models
- Silver Finish
- Includes All Gaskets & Two 5/8-18 Inverted Flare Fuel Inlets
- 1-inch Stud Length

Description
 4150 Fuel Bowl with Sight Glass **Part No. PR67162**

CARBURETTOR

BASE PLATE

Upgrade your carb with PROFORM's new Billet Inlet Base Plate! Made from solid billet construction versus die cast aluminium for added strength and durability this base plate comes with button torx head throttle plate screws, adjustable secondary air flow cam bracket, timed and full vacuum tubes for accessories and tuning, slip link mechanical secondary linkage, and power valve blow out protection!

Description
1-11/16" Suit 650/700/750/800 CFM
1-3/4" Suit 850/950/1050 CFM

Part No.
PR67155
PR67166

ACCELERATOR

SECONDARY PUMP CAM BRACKET

This newly designed secondary pump cam bracket features a mechanical idle enabling you to manually adjust the secondary throttle plates on your Holley® 4150 carbs and PROFORM carburetors.

PR67237

750 CFM CARBURETTOR

MAIN BODY GAS & ALCOHOL

Direct Replacement Components to turn a street carburettor into a high-performance carb: get that extra performance out of your ride in less than 30 minutes! Add up to 25-50 HP with PROFORM's 100% NEW, high-performance carburettor main body (no re-built components). Easy swap-in, swap-out installation utilizing existing metering blocks, fuel bowls, and baseplate. Involves only 14 screws. Has adjustable screw-in air bleeds, high-performance down-leg boosters. Get maximum air flow with no air horn, choke tower, or choke control. Comes with instructions, all necessary non-stick replacement gaskets, and high-performance jet kit. Technical Note: Main body does not retain vacuum advance port in original metering block.

- For Use with Holley 4777, 4778, 4779 and 4780 Carbs (PR67100C)
- For Use with Holley 4150 750 CFM Alcohol Carb (PR67216)
- No Air Horn
- Adjustable Air Bleeds and High-Performance Down-Leg Boosters
- Comes with Gaskets and Jet Kit
- Natural Aluminium Finish
- 100% New Components; Not Re-man or Refurbished

CARBURETTOR

METERING BLOCK RACE CALIBRATION MODEL

Still using 1950's technology? Upgrade your carburettor with PROFORM's new race-oriented billet metering blocks. Each unit is CNC machined from solid billet aluminium for added strength and durability and features changeable idle feed restriction, 4 emulsions for more aggressive tuning, and additional racing application upgrades.

- Race-Oriented Calibration Model • Fits Holley 4150 and 4160 Models • Purple Anodized Finish • Made from Billet Aluminium • Includes Two Gaskets and Vent Baffles • Includes Two Gaskets and Vent Baffles

Description
Race Calibrated Metering Block

CLEAR VIEW FUEL BOWL SIGHT PLUGS FOR HOLLEY CARBURETTORS

These plugs let you see the fuel level in the float bowls without removing the Plugs. They make it much faster, easier and less hazardous to set the float levels.

2 per set **MG6057**

VACUUM CAP ASSORTMENT

Use to block off open engine vacuum fittings. Sixteen pieces of quality "Buna-N" rubber makes for a much more durable, long-lasting part as compared to neoprene or vinyl materials...especially when exposed to high under-hood temperatures. Kit includes 4 pcs-1/8", 4 pcs-1/4", 2 pcs-5/16", 2 pcs-3/8".

POWER VALVE PLUG & GASKET

Racers sometimes will prefer to run without a power valve. In these cases a power valve plug must be used to block the power valve circuit. Jet sizes must be increased to compensate for loss of fuel enrichment provided by power valve. An increase of 6 to 8 jet sizes will, in most cases, be enough compensation. It is advisable to read the spark plugs and verify proper jetting. Power valve thread 1/2-28
Power Valve Plug & Gasket.....H026-36

Holley Main Jet Tap

Jet tap tools for cleaning up main jet threads in the metering block.
Holley Main Jet Tap 1/4-32 UNF Thread **H026-1**

TPS Kit for Electric Choke Holley Carburetors

If you're running an electric choke Holley carburetor and are having trouble figuring out how to get that electronic override transmission, such as a 4L60E or 4L80E. They can also be used for data acquisition. These TPS kits are also designed to supply the needed TPS signal to an electronic transmission while retaining a carburetor. They drive directly off of the primary throttle shaft for accurate voltage readings. These Holley TPS kits come complete with all the parts needed for a safe and easy installation.
TPS SWITCH SUIT AUTO CHOKE H0534-202

TPS SENSOR KIT FOR CARBURETTORS

Suits all standard flange Holley style 4 barrel carburetors. Comes complete with all the necessary hardware for installation. (TPS, Brackets, Bolts, and Fittings)
IM3930

Carburettor Discharge Nozzle Screws High Flow

Holley accelerator pump discharge nozzle screws are designed to hold your carburetor's accelerator pump discharge nozzles in place. These solid, steel screws feature a standard Phillips head stock-style design.
HOLLOW DISCHARGE NOZZLE SCREW H0121-7

POWER VALVE CHECK BALL KIT

Power valve "blowout" protection can now be added to pre '92 model 2300, 4150 and 4160 carburetors. Consisting of a spring, brass seat and check ball, this kit will effectively protect the power valve and is easy to install. Included is the proper drill bit size, with stop, to facilitate installation. Detailed instructions are included.
Features: Spring, Brass Seat, Check Ball, Protects Power Valve, Easy To Install, Proper Drill Bit Size w/Stop, Detailed Instructions

MAIN JET EXTENSIONS

An improved jet extension design that actually screws into the metering block. The main metering jet then threads into the end of the extension. This moves the main jet out into the fuel bowl where it cannot be uncovered by fuel, causing a lean condition, during hard acceleration or braking. Requires the use of special "notched" float to achieve proper clearance and to operate properly.

Main Jet Extensions (2 pack)

ULTRA XP

ALUMINUM

FUEL BOWL KIT

Ultra XP Aluminium Fuel Bowl Kit. Fits models 4150, 4160 & 4500. (Will require a .250" longer fuel line).
Black anodized finish

- Bowls use standard/traditional floats, float hangers, screws, accelerator diaphragms, etc.
- Features "Clear Pyrex" sight windows on both sides of bowl
- Fuel "trough" designed in floor of bowl to route fuel directly to jets & assists to keep jets covered
- Internal baffling cast into bowl
- 20% more fuel capacity vs. traditional V-Bowls, eliminates fuel starvation & provides consistent air/fuel ratios
- Fuel shelf to greatly minimize fuel aeration & promote more consistent metering
- A threaded drain plug has been incorporated into the bowl
- Bowls offer contoured fuel entry for smooth fuel flow directly to needle & seat assembly
- Bowls can be plumbed from either side
- Material added to key areas (needle & seat, fuel inlets, sight window) for added strength in demanding race environments
- Fuel bowl has 1/4 -16 fuel inlet threads (uses -8 Viton O-ring type fittings) Will not accept standard steel fittings

Description	Part No.
Ultra XP Aluminium Hard Core Grey 4150, 4160 & 4500 (Will require a .250" longer fuel line)	H0134-78HB

FUEL BOWL SCREW KITS

Includes fuel bowl gasket and four fuel bowl screws.	
Primary Side for Models 4150, 4160, 4175 & 4500	H026-124
Secondary Side for Models 4160 & 4175	H026-125

FUEL BOWL HELI-COIL KIT

Used to repair stripped fuel bowl screw threads in carburettor main body.	
Fuel Bowl Heli-Coil Kit	H026-2
Replacement Heli-Coil Inserts	H026-3

Gasket Assortments

These gasket assortments have been selected to cover popular Holley four barrels. Each package contains the quantities of gaskets shown.

Gasket Assortments	H0108-200

Fuel Bowl Inlet Fitting Gasket 7/8"	H0108-8
Fuel Bowl Screw Gasket	H0108-2-20
All Holley fuel bowl screws, 20 per pack	

Fuel Bowl Conversion Kit

Fits model 4150/4160 single pump carburetors. Converts a carburettor equipped with single inlet, side-hung style fuel bowls, with transfer tube, to dual inlet center-hung fuel bowls. Dual inlet bowls can be plumbed from either side.
H034-2

Aluminium V-Bowls with Clear Sight Glass

Primary fuel bowl, center-hung float style with provisions for accelerator pump and fuel inlet	H0134-71S
Secondary fuel bowl, center-hung float style with provisions for fuel inlet only. Used on vacuum secondary carbs	H0134-72S
Secondary fuel bowl, center-hung float style with provisions for accelerator pump and fuel inlet	H0134-73S

Fuel Bowl Kits with Sight Windows

Holley's fuel bowl sight plug window kits will enable you to eyeball the carburettor's fuel level without ever having to remove another sight plug. No muss, no fuss, no mess. Fuel bowls come polished. Dual inlet fuel bowl. Contains primary and secondary bowls (HP & HPDominator v-bowl)
HO 34-38

QUICK CHANGE FUEL BOWLS

Holley quick change jet kits come complete, ready for installation. They include the quick change fuel bowls, gaskets, washers, seals, fuel bowl plugs and jet tool. Everything that you need for an easy conversion. "Quick Change". A new standard of convenience from Holley.

- Features**
- Allows jet changes without removing the fuel bowl
 - For carburetors with center hung fuel bowls
 - Complete kits including: Fuel Bowl, Gaskets, Plugs, Jet removal tool included with primary bowls
 - Available in standard and chrome finishes
 - Provides quick and easy jet changes
 - Unique removal tool firmly holds jet

H034-24	Model 4500 DOMINATOR carburetors. Primary and secondary dual inlet fuel bowls
H034-25	Model 4150/4160 carburetors. Primary fuel bowl with single fuel inlet
H034-26	Model 4150 carburetors. Secondary fuel bowl with single fuel inlet and accelerator pump
H034-27	Model 4150 carburetors. Secondary fuel bowl with single inlet and no accelerator pump
H026-68	Replacement jet removal tool
H0108-77	Fuel bowl plug gasket (10)
H026-85	Fuel bowl plug (2)

SCE GASKETS FUEL

BOWL & METERING BLOCK GASKETS

- Jetting changes just got quicker & easier
- Super-tough molded gaskets
- Won't tear or stick
- Eliminates scraping
- Completely reusable
- Precision fuel and air passages for better consistency.
- Non-stick thermoplastic material resistant to all motor fuels, racing fuels and additives common to racing.
- Will not shrink, so float bowl screws stay tight.
- Strong, tear-proof and reusable.

HOLLEY E85 FAST KIT

Holley Fast Kits include only genuine Holley parts which are competitively priced. When your Holley is rebuilt using a genuine Holley Fast Kit, you're assured that original Holley quality is maintained.

- Fits Holley 4150 Ultra XP E85 carburetors
 - Genuine Holley quality parts
 - Step by step instructions included
 - Includes (1) 5.5 power valve, (2) accelerator pump diaphragms, (2) needle and seats, and all necessary gaskets
- Holley 4150 Ultra XP E85 H037-1549**
4150 Ultra XP Carburetors H037-1548

FAST KITS

Five Holley Fast Kits cover the entire spectrum of Holley performance carburetors. Holley Fast Kits include only genuine Holley parts and are also competitively priced.

When your Holley is rebuilt using a genuine Holley Fast Kit, you're assured that original Holley quality is being maintained. Detailed instructions are included.

2300 Models - 2 Barrel.	H037-1543
4160 Models 1848, 1850, 3310	H037-1542

4150 HP Series	H037-1546
4500 Series - Dominator	H037-1547

HOLLEY TRICK KIT

When your Holley performance carburettor is due for a performance rebuild, it's time to get the Holley Trick Kit. This Holley Trick Kit contains all the parts that you'll need to perform a complete carburettor rebuild on your Holley vacuum secondary or double pump carburettor. Plus it's got extra parts related to carburettor calibration that are required to accomplish a real performance tune. These include accelerator pump discharge nozzles, accelerator pump cams, vacuum secondary springs and extra gaskets. A carburettor exploded view and a detailed tuning guide is also included. The packaging serves as a handy parts tray. This Holley Trick Kit has it all.
Trick Kit, Suits all 4150, 4160 & 4500 Carburetors H037-933

RENEW KITS

Purchase a Holley Renew Kit next time a carburettor rebuild is due and you'll be assured of using only genuine Holley factory service parts. This really is the only sure way of knowing that your Holley carburettor will be brought back to original specifications and "like new" condition. The Renew Kit package includes new gaskets, O-rings, pump diaphragms, needle and seats, power valves, and a detailed instruction sheet to take you step-by-step through the rebuilding process. All the parts and information necessary for a professional rebuild are included. Leave the "guessing" to others. Be assured with Holley brand Renew Kits.

- Notched float with 2 jet extensions **HO116-10**
- Notched float with NO extensions **HO116-11**

Float Hanger Hardware Kit

Includes fuel bowl hardware for float installation **HO20-105**

ACCELERATOR PUMP CONVERSION KIT - 50cc

Instantaneous throttle response for 2300, 4150 and 4160. Pull strongly throughout the RPM band. A must for tunnel ram setups. This kit is for those who demand ultimate performance from their Holley carburetor. The 50cc accelerator pump will substantially increase fuel capacity over the standard 30cc pump system. Eliminates flat spots off idle or at any other RPM range. This kit includes everything required for easy installation including new pump housing arm, diaphragm, spring and longer pump housing screws. May also require use of the hollow nozzle screw (PN 26-12)

Accelerator Pump Conv. Kit 50cc **HO20-11**

ACCELERATOR PUMP CAM ASSORTMENT

Another great tuning kit from Holley. This one will allow you to tailor accelerator pump performance requirements to the engine's actual requirements. Each cam has a different shape or profile to give different results. Cam 'lift' directly affects the accelerator pump stroke and therefore pump capacity. Ramp profile or shape controls the 'timing' of the shot. A steeply rising shape will give a fast, heavy fuel shot right off idle. Conversely a gently sloping ramp will spread the pump action over a longer period of time.

Accelerator Pump Cam Asst Kit **HO20-12**

ACCELERATOR PUMP DIAPHRAGMS

- 30cc(Rubber) **HO135-5**
 - 30cc (GFLT) * w/o screws **HO135-10**
 - 50cc (Rubber) **HO135-7**
 - 50cc (GFLT) **HO135-9**
 - Check Valve (umbrella) **HO26-41**
- *GFLT Diaphragms are compatible for use with all alcohol based fuels

FUEL TRANSFER TUBES

Carburetor models 4150 and 4175 **HO26-114**
 Carburetor model 4160 **HO26-115**
 Carb models 4165 **HO26-116**
 Accelerator Pump Transfer Tube **HO26-23**

FUEL TRANSFER TUBE SEALS

Works on old-style transfer tubes 2/pkg **HO26-37**
 Viton seal for new-style transfer tube **HO108-97**

SMALL PARTS KIT

This kit consists of a selection of commonly used O-rings, E-rings, C-rings, check balls, washers, cotter pins and rod retainers.

Carburetor Small Parts Assortment **HO34-10**

VACUUM SECONDARY SPRING KIT

Consists of seven springs, allow adjustment of secondaries
Holley Spring kit Second Diaphragm **HO20-13**

VACUUM SECONDARY DIAPHRAGMS

Vac Secondary 1848 **HO135-2**
Vac Secondary 1850, 3310 **HO135-4**

ACCELERATOR PUMP TUNING KIT

Tuning kit is has a selection of accelerator pump hardware components including pump diaphragms, pump nozzles, pump cams and related parts. Contained in a convenient plastic parts case, this kit has all that is required to properly tune and calibrate the accelerator pump circuit(s) for your street, drag or circle track car or tow vehicle. A handy parts guide is affixed to the inside case to assist in reordering components when necessary.

Accelerator Pump Tuning Kit **HO36-184**

Kit includes: 2 each of Twelve pump discharge nozzle sizes ranging from .025 to .052. • 2 each of ten accelerator pump cam profiles (colours). • 5x 50cc GFLT pump diaphragm. • 5 x 30cc GFLT pump diaphragm. • Miscellaneous screws, gaskets, check valves and weights.

TUNING/CALIBRATION KIT - DOUBLE PUMP CARBS

Tuning kit contains a selection of main jets, pump nozzles and power valves, in popular sizes, contained in handy and durable, compartmentalised plastic case. Ideal for track side tuning, kit provides quick and easy carburetor tuning with correct parts. In addition, the parts case allows you to keep parts organised and readily at hand. Parts guide is affixed to the inside case cover. Numbers reference on guide assist in reordering components. Gaskets included to facilitate carburetor reassembly.

Tuning/Calibration Kit **HO36-182**

Kit includes:
 4x Eight metering jet sizes ranging from #70 to #84
 2x #35 Pump nozzle, 2x #37 Pump nozzle
 1x #35 Power valve, 1x #45 Power valve
 1x #50 Power nozzle, 12x Metering Block Gaskets
 12x Fuel Bowl Gaskets, Miscellaneous pump nozzle, power valve and fuel bowl screw gaskets

JET ASSORTMENT KIT

The Holley jet assortment kit is the professional way to track tune your Holley carburetor for top performance. This kit consists of 2 each of thirty six different jet sizes ranging from #64 to #99. The jets are contained in a plastic case that is designed to keep them separated and make them easily accessible. Jet sizes selected will give the broadest range of adjustment and tuning for most performance carburetor applications.

Holley assorted Jet Kit **HO36-181**

ALCOHOL JET KIT

This Holley jet assortment kit consists of 4 each of 24 new alcohol jet sizes that range from .132" to .200", these jets will not fit the standard Holley metering block; they are designed to fit only the Holley list R-80498, 950CFM Pro-Series HP alcohol carburetor. The assortment comes packaged in a durable plastic carrying case.

Pro Series Holley Jet Kit **HO36-201**

AIR BLEED KIT

This air bleed kit is a must when track-tuning a 4500 Dominator HP carburetor for maximum performance. The kit includes four of each air bleed size from 23 to 78. All bleeds are #10-32 UNF thread. Air bleeds are contained in a plastic case that is designed to keep them separated and make them easily accessible.

Air Bleed Assortment Kit **HO36-240**

EMULSION BLEED KIT

This kit contains a selection of emulsion bleeds that can be used for tuning the Ultra Series carburetors. Contains ten each of the following sizes: Blank, 0.020", 0.031", 0.040", 0.046", 0.052".

Emulsion Bleed Assortment Kit **HO36-322**

METERING BLOCK CONVERSION KITS

- Model 4160 to 4150 Conversion Kits** **HO34-6**
 0-1850 or most any model 4160 with side hung fuel bowls.
- Model 4160 to 4150 Conversion Kits** **HO34-13**
 0-3310 or most any model 4160 with centre hung fuel bowls.

CHOKE CONVERSION KITS

These kits can be used to convert Holley carburetors which originally came equipped either with a hot air or hand operated choke to full automatic/electric operation.

Electric Choke

Conversion Kit **HO45-223**

Carburetors designed with an internal vacuum source such as 0-1850, 03310, 0-6425, 0-7448.

Electric Choke

Conversion Kit **HO45-224**

Carburetors designed with an external vacuum source such as 0-4412, 0-4776, 4777, 0-4779, 0-4780, 0-4781, 0-6299, 0-6708, 0-6709.

Manual Choke Conversion Kit.

HO45-225

All of the parts required for a fast, easy changeover to hand choke operation. For all carburetor models 2300, 4150 and 4160 with choke hardware mounting bosses on side of main body

Replacement Electric Choke Caps **HO45-258**

Carburetor models 2300, 4150, 4160, 4010 and 4011. Also for Holley choke conversion kits P/Ns 45-223, 45-224, 45-226, 45-449, 45-450 and 45-459

HOLLEY STANDARD MAIN JETS

Holley main jets are threaded for ease of installation and replacement.

All sizes are for reference use only.

Actual control of sizes is by flow check. In all instances, a higher stamped number indicates a greater average flow rate. Do not drill or damage the jet metering orifice. Change jet for your exact requirements.

 Quick Change Diaphragm Cover HO20-59
 Allows You To Change The Secondary Diaphragm Spring Without Disturbing The Diaphragm.

COMP Cams MaxJet

Gasoline Jet Kits

How many times have you heard a racer say, "I made two jet changes, but the engine still didn't run properly"? The reason for this relates directly to the jets being used. Typically, jets are installed with flat blade screwdrivers, and the slots are damaged to some degree during installation, altering fuel delivery by up to 50 percent. This problem can be solved with COMP Cams MaxJet gasoline jet kits. These jets are available from 0.050 in. to 0.130 in. increments and are compatible with all known racing fuels. They are easily crossed over from Holley jets, are produced with a 5/16 in. hex-stock brass, and are installed using a 5/16 in. nut driver, eliminating the fuel delivery damage caused by slot-type jets. They are virtually indestructible and provide smooth and precise fuel delivery

COMP CAMS MAXJET KIT .083"- .093" MJ8393
 COMP CAMS MAXJET KIT .094"- .104" MJ94104

COMP Cams MaxJet

Jet Extensions

COMP Cams MaxJet Jet Extensions are designed to work with MaxJet and Holley jets. These MaxJet extensions are longer than conventional screw-in jet extensions and hold more fuel and prevent cavitation during hard-launch conditions on the drag strip. Screw-in jet extensions require a notched float for proper operation. MJEXT-2

Performer and Thunder Series Metering Jets

These metering jets are designed for use with Edelbrock Performer and Thunder Series carbs only. Do not use with other brands. Sold in pairs.

Chrysler & Ford Throttle Lever Adapters

Throttle Lever Adapter ED1481 fits 1966 and later Chryslers. ED1483 is for Ford automatic transmission equipped vehicles with cable operated throttle (except A.O.D.). Both accept cruise control. Use with appropriate throttle cable plate when necessary.

Chrysler Throttle Lever Adapter (1966 and later) ED1481
 Ford Throttle Lever Adapter (1968 and later) ED1483

Fuel Line & Filter Kits

Single-feed Fuel Line & Filter Kits For All Edelbrock Square-Bore Carbs

These Fuel Line & Filter Kits fit Thunder Series or Performer Series carbs. They include a chromed hard steel line and Russell fuel filter. Match with

Pre-Fitted Stainless Fuel Pump to Filter Lines that connect the fuel filter to an Edelbrock street fuel pump or any pump with 3/8" NPT outlet, see Fuel Pumps. The Chromed Steel Fuel Line is sold individually for universal applications.
 Single-Feed Fuel Line with polished aluminium filter ED8131
 Single-Feed Fuel Line with blue anodized aluminium filter ED8134

Dual-feed fuel line & filter kits for all edelbrock thunder series AVS carbs

Designed especially for the Edelbrock Thunder Series AVS carburetors, these dual feed lines include chromed steel components and a stainless steel braided line for high quality looks and performance. Match with pre-fitted stainless fuel pump to filter lines that connect the fuel filter to an Edelbrock street fuel pump or any pump with a 3/8" NPT outlet.

Dual-Feed Fuel Line with blue anodized filter ED8133
 dual-feed line with polished alloy filter ED8128
 dual-feed fuel filter with no fuel filter and 3/8" barbed inlet ED8132

Stainless Steel Braided Lines

For Use With Edelbrock Single- and Dual-Feed Fuel Line Kits These high-quality stainless steel braided lines make it simple to complete your installation of any Edelbrock fuel pump to fuel filter. Includes Russell -6 AN anodized aluminium fittings. For Small-Block Chevys ED8123

Uni-Syn Carburetor Balancing Instrument

Uni-Syn is a precision instrument which provides a visual method of balancing multiple carburetor setups with a high degree of accuracy. Instructions included.

Uni-Syn "A" (1-bbl. and 2-bbl. with round top; i.e. British S.U. carbs) ED4025
 Uni-Syn "MC" (motorcycle) ED4027

Carburetor Calibration Kits

The most economical way to fine tune your Performer or Thunder series for optimum performance. All calibration kits include an assortment of metering rods and jets, one pair of metering rod retaining springs and a complete assortment of step-up springs.

Clear-View Sight Plugs

for Holley Carbs

Clear Sight Plugs are like having a "window" to your float bowl • Allows you to check float bowl level without removing the plug and spilling fuel
 • 2 per package, Includes O-rings

Clear-View Sight Plugs for Holley Carbs MO65226

Throttle Return Springs

Package of two stainless steel springs MO64929

Nylon Float Bowl Washer Kit

The ultimate cure for the problem of soft, wet, deteriorating fibre, Holley float bowl washers. Our nearly indestructible nylon replacement washers are unaffected by fuel, and won't leak or break down under normal usage. Ten per package

Description Float Bowl Washer Kit, For Holley Carbs Part No. MO65225

Jet Extension Kit

• Eliminates fuel starvation during hard acceleration or cornering
 • Each kit contains three sets of extensions: 1/2", 3/4" & 1" long which can be cut to any custom application

Carburetor Jet Extension Kit MO65227

Alcohol Jet Extensions

• Brass Jet Extensions screw into the metering block and they won't fall out!
 • CNC machined for precise fit and maximum fuel flow
 • Must be used in conjunction with notched floats
 • Two per package
 • Suits large diameter alcohol jets

Jet Extensions, 5/16"-32. Holley Alcohol Jets MO65441

CARBURETTOR ADAPTERS

Carb Adapter Kits

Increase your car's overall performance by updating the carburation to the latest hi-performance carburetors without purchasing costly intake manifolds. These carburetor adapter kits install quickly and easily. Gaskets, studs, nuts and washers are included. Adapters are made of diecast aluminium. Adapts Holley 4500 4-bbl. carb. to large base Holley and AFB 4-bbl. manifolds 1930 Any 4-bbl. carb. to any 4-bbl. manifold except Holley 4500 and OEM manifolds with exposed exhaust crossover tube 1932. Adapts Holley 4500 4-bbl carb. to large base Holley and AFB 4-bbl manifolds MG1930

Holley 2 Barrel to Squarebore Manifold adapter 5R10-555

Dominator To Squarebore Adaptor Plate

This 2.00" tall cast aluminium adaptor plate adapts Dominator carburetors to squarebore manifolds. The 2.00" height provides a smooth transition into the manifold.
 Dominator To Squarebore Adaptor Plate ED8716

CARBURETTOR ADAPTERS

- Adapts Square Bore Carb to Spread Bore Manifold
- Supplied with Studs, Nuts & Gaskets
- Open or Tapered 4-Hole Design

Open Carb Adapter **RPCR2066**
Holley square bore gasket open centre **RPCR2069**

ALUMINIUM CARB SPACERS

Aluminium spacers for squarebore carburettors. Includes gaskets and studs.

1" Open Spacer with 3/8" Vacuum Tube **RPCR2103**
2" Open Spacer **RPCR2081**

Aluminium Carb Spacer Kits

Increase your power and performance with a one or two-inch carburettor spacer from Mr. Gasket. Designed to fit the standard Holley/Carter bolt pattern. These precision die cast aluminium spacer kits are complete with studs, washers, nuts, and gaskets. The one inch open centre spacer 6005 features a 1/4" diameter knock out hole if an additional vacuum port is required.

- 1" open centre **MG6005**
- 1" ported **MG6006**
- 2" open centre **MG6007**
- 2" ported **MG6008**

Thermal Insulating Carb Spacer Kits

Manufactured from advanced phenolic thermoset plastic and engineered to withstand extreme high intake manifold temperatures, these spacers were designed to insulate and reduce heat flow to the carburettor keeping it cooler to allow a denser fuel mixture to enter the engine and produce more horsepower. Available to fit the standard Holley/Carter and Quadrajt four barrel bolt pattern in your choice of either an open centre or four hole straight bore design, these spacers measure 1" thick and are packaged complete with gaskets, studs, nuts and washers.

- Four-Hole bore manifold design **MG3404**
- Open Centre manifold design **MG3405**
- Quadrajt four-hole design **MG3406**

Trackside Carb Spacer Kits

Easily optimize your flow rates with the new PROFORM modular 1" carb spacer kit. Each kit comes with one frame and 3 popular inserts: open, 4-hole, and tapered 4-hole. Various engine combinations have various fuel and air distribution requirements for maximum performance. Lightweight heat-resistant phenolic.

Proform 3 in 1 Carby Spacer Kit **PR67160C**

Carburettor Spacers Wood Design

- Unique 1/2" spacers are precision machined and can stacked without gaskets.
- Thin layers of laminated hardwood, bonded with resin form a natural heat sink.
- A sheet of phenolic resin-impregnated paper is bonded to both sides.
- Can be easily modified to your particular manifold for optimum performance.

- 1/2" Open Spacer for Square Bore Carburettors **MO65015**
- 1/2" Open Spacer for Dominator and King Demon Carburettors **MO65016**
- 1/2" 4 Hole Spacer for Dominator and King Demon Carburettors **MO65017**
- 1/2" Open Spacer for Spreadbore Carburettors **MO65018**

Carburettor Wedge Plate

• To keep carburettor float-bowls "level" during acceleration, some amount of mounted carburettor angle is necessary
• Moroso's wedge plate tilts the carburettor forward 5° to provide the optimum angle during quick acceleration and front-end lift
Wedge Plate for 4150 Style Carburettors **MO65030**

CARBURETTOR SPACER, INSULATING PLASTIC AND PHENOLIC

- Advanced plastic and phenolic compounds are specially formulated to reduce heat conductivity 10 times greater than aluminium
- Reducing fuel temperature inside the carburettor results in a denser, more powerful fuel charge to the manifold
- Insulating phenolic spacers come pre-drilled for alignment pins and Nos. 64930 and 64940 include all mounting hardware
- Gaskets not included

- MO64930 - 4150 Carb 1" Spacer 4 Holes, 1.75" Bore Plastic Phenolic**
- MO64943 - 4150 Carb 1/2" Spacer 4 Holes, 1.75" Bore Plastic Phenolic**

AFR lightweight Phenolic carburettor spacers

AFR lightweight Phenolic carburettor spacers for 4150 style carburettors are available in an 1" thick open or tapered four hole version. Both versions will act as a heat barrier between the manifold and carburettor to keep the fuel in the float bowls cooler, as well as the actual carburettors body itself. This results in a cooler, denser air/fuel induction charge for increased HP. Our tapered four hole spacer will typically increase HP and show notable improvements in torque as well. Our open spacer works well in applications requiring more plenum volume and RPM. Some applications will benefit from both installed (tapered and open) assuming you have the hood height to accommodate them. Both have a clover leaf design making them more efficient by reducing some of the turbulent air directly under the carburettor base. They fit the AFR line of composite intake manifolds perfectly but can be used on most aftermarket manifolds as well.

- Description
- 1" Open Clover Leaf 4150
- 1" Tapered 4 Hole Clover Leaf 4150

- Part No
- AFR4450**
- AFR4460**

HEAT INSULATOR GASKETS

Designed to help prevent fuel percolation in Performer Series and Thunder Series AVS carburettors exposed to extreme underhood temperatures. Use #9265 with open plenum manifolds such as Torker II and Victors. #9266 features a divided center which is designed to seal the carburettor to dual-plane manifolds including Performer, Performer RPM and most RPM Air-Gap manifolds. All gaskets come with extended carb studs.

- ED9265** Square-Bore Heat Insulator Gasket - 0.320" thick
- ED9267** Square-Bore Heat Insulator Gaskets for Edelbrock Dual-Quad Manifolds 0.125" thick - 2 gaskets inc

CARBURETTOR ADAPTERS

MO65000 - Carburettor Adapter, 2" Cast Aluminium, adapts Holley® 4500 Dominator carburettor to Holley 4150/4160 intake manifold bolt pattern

RPC 4-HOLE ADAPTER

Reversible Aluminum Holley AFB 4bbl to Small 4bbl Adapter, Studs and gaskets included in kit.

Description **Part No**
1-1/16" port to 1-7/16" port **RPCR2064**

Squarebore To Dominator Adaptor

Wilson Manifolds carburettor adaptor maximizes horsepower in applications where the carburettor and intake manifold were not originally designed to be used together. The internal shape of the adaptor allows improved overall air flow and distribution.
4500 Carb to 4150 Manifold Adaptor 1.50" tall **WI027030**

WILSON CARBURETTOR ADAPTER

This 1.5" tall billet aluminium adapter allows you to mate a 4150 style carburettor to a 4500 style intake manifold & vice versa. The inner finish is contoured for better flow.

Description **Part No**
4150 TO 4500 Carburettor, 1.50" Tall **WI007030**
4500 TO 4150 Carburettor, 1.50" Tall **WI027030**

CARBURETTOR SPACERS

WILSON TAPERED CARBURETTOR SPACERS

Wilson Manifolds Tapered Spacers feature a computer generated variable radius taper design that maximizes the airflow through the carburetor and enhances air/fuel distribution for more horse-power. Part throttle performance and distribution are improved by redirecting the flow pattern created by the partially open throttle blades and gradually reducing the velocity of the air/fuel mixture entering the plenum to allow for a smoother transition into each runner; full throttle performance is improved by increased flow. Our Tapered spacers can increase flow through the carburetor/throttle body by as much as 110 CFM. Wilson Manifolds tapered spacers will increase torque, horsepower and acceleration throughout the entire RPM range.

- Up To 30+ Bolt On Horsepower
- Improves Throttle Response
- Improves Distribution
- Increases Signal To The Carburetor
- Increases Flow Through The Carburetor / Throttle Body
- Oval, Drag, Street, Marine & Towing
- Works Through The Entire RPM Range
- Light Weight Design
- Over 30 Years Experience Making Tapered Spacers
- Alcohol Compatible

Description **Part No**

- 4 Hole Spacer 2" **RPCR9135**

HIGH VELOCITY SPACER

Aeroflow's high velocity spacers increase the velocity of the fuel/air charge. This assists in enhancing fuel atomisation, increases throttle response, boosts your high RPM power and insulates the carburettor from the manifold. They are available in raw finish or black anodized and are made from 6061-T6 billet aluminium.

Part No	Flange	description	Finish

CARBURETTOR FITTINGS & LINES

Moroso Pressure Regulator Fuel Log

A Moroso fuel log increases the flow orifice to nearly twice that of two regulators combined, creating a totally free-flowing fuel system that allows the pumps to deliver full capacity at all times. Eliminates Y-fittings, T-fittings and restrictive fuel blocks. Includes shims to adjust pressure from 6-10 psi and requires a fuel return line to the tank. Accepts 1/8", 1/4" and 3/8" NPT fittings. **MO65145**

"T"-STYLE FUEL BLOCKS

• Ideal for plumbing tri power set ups.
Dual inlet Holleys with nitrous
• 3/8" Dia. NPT tapped inlet with 1/4" Dia. Tapped outlets
Dual outlet (2) **MG6150**
Triple outlet (3) **MG6151**

MOON FUEL BLOCK

One of Dean Moon's original products which he made in High school, still widely used today!
Choice of 2,3,4, or 6 carb set-up with 3/8" NPT inlet on both ends of block and 1/8" NPT outlet on top. Made from aluminium.
MNMP1010 2 Carb MNMP1011 3 Carb
MNMP1012 4 Carb MNMP1013 6 Carb

Finned Aluminium Fuel Blocks

These cast aluminium fuel blocks are offered in 3 styles; 2-port, 3-port and 4-port. They have external mounting lugs and come polished.
2-Port Finned Aluminium Fuel Block **S0300-6132**
3-Port Finned Aluminium Fuel Block **S0300-6134**
4-Port Finned Aluminium Fuel Block **S0300-6136**

FUEL DISTRIBUTION BLOCKS FOR DUAL, TRIPLE AND QUAD CARBURETOR SETUPS

Edelbrock has reintroduced the vintage cast aluminium fuel blocks for dual, triple and quad carb applications for your hot rod or custom applications. These fuel blocks feature a single 3/8" inlet and one, two or four 1/4" outlet, depending on application. Each fuel block has four holes for mounting to a firewall. Available as-cast or with polished finish.

	As-Cast	Polished
Dual Outlet Fuel Block	ED1280	ED12801
Triple Outlet Fuel Block	ED1285	ED12851
Quad Outlet Fuel Block	ED1290	ED12901

ADJUSTABLE BILLET FUEL LOGS

Aeroflow's Fuel Log features ball and socket assemblies that swivel +/- 20 degrees, allowing additional clearance for throttle stops, nitrous plates and other accessories. The telescopic log will fit 4150 style carburetors, Ultra HP, 4500 series Dominator and Barry Grant carburetors. The Fuel Log has one AN Flare Plug and a male -8AN male flare fitting supplied for front or rear entry setup.

Part No	Description

REPLACEMENT LEGS For Adjustable Billet Fuel Logs

These replacement legs are specifically designed to suit our AF64-2037 adjustable billet fuel log. They are great if you have lost or damaged your leg. Or if you have simply upgraded to a different carburettor and now require a different thread. Available to suit 4150/4500 style carburetors such as Holley, Dominator, Ultra-HP and Barry Grant. Each kit includes two legs and either O-rings or crush washers to seal.

CABLES & LINKAGE KITS & CARBY BRACKETS

Lokar Throttle Cables

All Lokar Throttle Cables are available in either stainless steel braided housing or black housing. They are designed with a specially extruded liner for extended life of the cable – not to be confused with ordinary braided brake hose. Cables are equipped with aluminum fittings and aluminium ferrule to eliminate fraying. "U-Cut-to-Fit" outer housing is available in 24" or 36" lengths with a "U-Cut-to-Fit" stainless inner wire. Clevis is designed without cotter pins or set screws. Adapts to factory and aftermarket pedals. Custom lengths available upon request. Cables mount nicely with Lokar's Stainless Steel Carburettor Bracket and Return Springs (sold separately). Kits complete with installation instructions.

HI-TECH KICKDOWN KITS

To add more shine to your engine compartment, try Lokar's Polished U-Cut-to-Fit braided stainless cable. It is designed with a specially extruded liner for extended life of the cable – not to be confused with ordinary brake hose. Kickdown features polished aluminium fittings with polished ferrule to eliminate frayed cable ends. Kickdowns are adaptable for all types of manifolds including tunnel ram, blower manifolds and Weber induction systems. Mount our kickdown with our stainless steel carburettor bracket and return springs (sold separately). All units are available in black housing upon special request. Complete instructions included in kit.

Bracket & Spacer Kit for Edelbrock Pro-Flo Fuel Injection

- CNC machined from 6061-T6 billet aluminum for strength and style
- Dual Stainless Steel Return Springs
- Easy installation of Lokar Throttle Cable and Kickdown kits
- All hardware and detailed mounting instructions included
- Recommended by Edelbrock

LK-TCB-40EDK Edelbrock Pro-Flo Injection Spacer/Throttle/Kickdown Bracket Kit

HOLLEY SNIPER & FITECH THROTTLE & KICKDOWN BRACKETS

Lokar's Holley Sniper and FiTech Brackets allow for a clean and simple integration between Lokar's Throttle and Kickdown Cables and FiTech or Holley Sniper EFI systems. The FiTech brackets are available in polished or black stainless steel and come with all mounting hardware and return springs. The Sniper brackets are available in polished or black stainless steel, and black anodized or Brite billet finish.

LK-TCB-40FIT Stainless FiTech Bracket
LK-TCB-40HS1 Brite Billet Holley Sniper Bracket

HOLLEY SNIPER THROTTLE CABLE BRACKET

Aeroflow throttle cable mounting bracket is specifically designed for the Holley Sniper EFI unit. It is a direct bolt on option that allows you to mount up and attach our universal throttle cable (other branded throttle cables may also work). Machined from 6061-T6 billet aluminium they are available in silver or black anodized finishes. Return springs are included in this kit along with mounting hardware.

AF64-2173 Silver Finish
AF64-2173BLK Black Finish

Billet Aluminum Throttle Cable Mounting Bracket for Edelbrock 4-Barrel Carburetors

- CNC machined from 6061-T6 billet aluminum for strength and style
- Bracket designed to fit single or dual quad carbs
- Easy installation of Lokar Throttle Cable and Kickdown kits
- Dual Stainless Steel Return Springs
- All hardware and detailed mounting instructions included
- Attaches to both rear and carb bolts to eliminate bracket movement
- Bracket utilizes either bolt pattern offered on Edelbrock carbs & manifolds

LK-TCB-40DQ Billet Aluminum Edelbrock Carb Bracket & Springs

Duo-Pak Kits

Save with Lokar's Duo-Pak Throttle Cable Kits. This kit is equipped with Hi-Tech stainless steel braided Throttle Cable or a black Universal Throttle Cable plus our Stainless Steel Carburettor Bracket and Return Spring Kit. Duo-Pak only available for carbureted applications with Holley, Edelbrock, AFB, Quadraj et and In-Line Dual Quad carbs.

Part No. **Description**
LK-DP-1000HT 24" Hi-Tech Stainless Steel Cable Duo-Pak Kit
LK-DP-1000HT36 36" Hi-Tech Stainless Steel Cable Duo-Pak Kit

Replacement Parts

Replacement carb ends and inner wire for Lokar throttle cable kits.

Part No. **Description**
LK-S-1034 Replacement Carb End for Throttle Cables
LK-S-1041 36" Replacement Inner Wire for Throttle Cables
LK-S-1042 48" Replacement Inner Wire for Throttle Cables

Stainless Steel Throttle Cable Bracket & Springs

Stainless Steel & Black Throttle Cable Bracket & Springs
 This bracket mounts to rear of Holley, Edelbrock, AFB, Quadraj et, Demon, and In-Line Dual Quads. This is designed with dual springs are used to mount Lokar's Throttle Cable and Kickdown assemblies. Design provides improved clearance on Edelbrock carbs. Design includes tension screw to prevent bracket from movement under extreme pressure on a kickdown cable, such as with a 700-R4 transmission.

LK-SRK-4000 Stainless Steel Carburettor Bracket and Stainless Springs

LK-XSRK-4000 Black Carburettor Bracket and Stainless Springs

STAINLESS STEEL THROTTLE CABLES

Aeroflow's Throttle Cables are 308 stainless steel braided covering over a hard-wearing high quality PTFE liner. These universal throttle cables contain all of the necessary hardware for a complete installation onto any application. They are available in 24" (609mm), 36" (914mm), 48" (1219mm) and 60" (1524mm) lengths. The inner stainless wire can also be cut to fit any desirable length.

Stainless Steel 3 Bolt Stromberg Style Carburetors Tri-Power Throttle Cable Bracket & Springs
LK-TRP-4006

UNIVERSAL BELL CRANK KITS

This bell crank kit features 12 mounting holes for multi-arm positioning and can be used in either push or pull type throttle linkages. Center hole is 1/4" diameter for easy mounting. Each arm has 3 holes for various throttle ratios. Both kits include all hardware needed for installation and are available either with or without a universal mounting bracket.
Bell crank with universal mounting bracket **MG1523**

Edelbrock Intake Manifold Installation Accessories

Edelbrock has paved the way to a trouble-free manifold installation job for you with this comprehensive array of accessories. These accessories include anodized air cleaner hold nuts, manifold pipe plugs, and everything in between.
ED8010 Universal Throttle Rod Extension Kit (7-1/2" long)
ED8036 Throttle, Cruise Control & Trans. Kick-Down Mounting Bracket Cad. plated gold - Small-block Chevy (1978 & earlier with TH350, 200R4, or 700R4 trans.)

Carburettor Throttle Lever Extension

Will install on any Holley square flange carburetor with the universal throttle linkage. Usually used on Chrysler applications.
HOLLEY THROTTLE LEVER CHRYSLER **HO20-7**

CARBURETTOR LINKAGE COMPONENTS

Separate linkage pieces to allow you to assemble your own custom carburetor linkage system, using parts from one source. Every piece of carburetor linkage is available separately, eliminating the need to buy a standard kit for those special applications.

- 1/4" Rod ends, 2/set **MG3812G**
- 11-12" Linkage rod 1/4-28 threads **MG3815**
- Linkage rod stop with quick disconnect pivot **MG3819G**
- Linkage arm 6650 style, 2/set-red anodized **MG3821G**
- Linkage rod for 6650, 7" long w/3" offset **MG3829G**

CHROME PLATED CARBURETTOR LINKAGE PLATES

These plates take the hassle out of throttle linkage hookups. Available for Holley, AFB and Quadrajet Carburetors. These linkage plates are polished and chrome plated for lasting beauty. Linkage plates come complete with gaskets and standard cable bracket for GM vehicles. Also available separately is a chrome plated bracket for Morse cables.
Carburettor Linkage Plate for Holley & AFB **MG6035**
Bracket for Morse cable **MG6037**

THROTTLE RETURN SPRING KIT

Designed for positive throttle return to assure added safety, this kit features a custom return spring bracket that is notched to provide adjustment for eight spring tension settings. The inner and outer return springs are Electro-Lease nickel-Plated to resist rust and extension fatigue.
Fits all Demon Carburetors **MG9680G**

CARBURETTOR BUSHING KIT

This Carburettor Bushing Kit reduces the 1/2" throttle shaft hole to 1/4" I.D., which makes for easy throttle linkage attachment, or can be used to replace the stock rubber unit. Machined from cold roll steel, then bright zinc plated, the two piece bushing measures 9/16" wide when installed and fits most 4-bbl. carburetors with 1/2" throttle linkage hole.
All GM & Holley carbs with 1/2" throttle hole **MG6026**

CARBURETTOR BUSHING/PIVOT

This carburettor bushing replaces a worn out or sloppy factory bushing and gives smooth, trouble-free throttle operation. Accommodates 1/4" diameter throttle rod.
All GM & Holley carbs with 1/2" throttle hole **MG1512**

THROTTLE CABLE BRACKET

Chrome throttle cable bracket and throttle return spring installation. Includes dual stainless steel throttle return springs. Works on Holley models 4150 and 4160.
Holley Bracket for GM Cable **HO20-88**

TRANSMISSION KICKDOWN THROTTLE LINKAGE

This part will bolt to the throttle lever of a Holley model 4165/4175 carburettor. It will provide an effective mounting point for the transmission kickdown carburettor hookup.
Kickdown Bracket for Holley Spreadbore **HO20-35**

TH-350 TRANSMISSION KICKDOWN CABLE MANIFOLD BRACKET

NOTE: - Only suits AF64-2001 and AF64-2002

Throttle Return Spring Kit

4500 Dominator & King Demon

Fits a 4500 series and King Demon carburetors
Made from sturdy 12-gauge steel and finished in (electrostatic paint) E-coat satin black Kit includes heavy and light sets of stainless steel return springs, all mounting hardware and complete installation instructions

MO64918 Throttle Return Spring Kit, 4500 Dominator and King Demon Carb Mounts.

Throttle Return Spring Kit

4150 Holley® Series Including New HP Series

Made to clear low-profile racing air cleaners, Moroso Nos. 65860, 65870, 65900, 65901, 65902, 65903, 65908 & 65910
Manufactured from sturdy 12-gauge steel and finished in (electrostatic paint) E-coat satin black
Kit includes heavy and light sets of stainless steel return springs, all mounting hardware and complete installation instructions
MO64919 Throttle Return Spring Kit, 4150 Holley® Series Carb including new HP Series

THROTTLE BALL ASSORTMENT KIT

AF55-1004 Throttle ball assortment kit
4 balls, nuts & washers

Ball sizes 6.33mm (1/4"), 5.5mm (7/32"), 6.9mm (17/64")

Tunnel Ram Linkage Kit

Hi-Ram Tunnel Ram Manifold Linkage Kit.
Fits Dual Forward Mounted In-Line Carbs.

Tunnel Ram Linkage Kit -

Dual Inline Carbs

WM4000

BLOWER TWIN CARB LINKAGE KIT

Aeroflow's dual carb linkage kit is designed for dual carbs (non-dominator) mounted sideways on top of a blower. AF42-1070 has high quality chrome elite finish and AF42-1070BLK hand polished black anodised finished.

They feature adjustable heim end design and needle bearings for longevity and smooth throttle operation. Shafts and arms are splined to avert slipping. Two extra-long studs are included to mount the lower cable bracket to the left side of blower.

Part No	Description
AF42-1070	Chrome Kit
AF42-1070BLK	Black anodised kit

BLOWER CARBURETTOR LINKAGES

Linkage Kit Dual Sideways 4150 or 4500	B4350
Linkage Kit Dual Inline (8 5/8")	B4360

TUNNEL RAM & BLOWER LINKAGE KITS

Enderle carburettor linkage kits feature precision rod ends, solid bushings and splined shafts for smooth and consistent operation. These kits ensure proper geometry which is crucial in twin carburettor installations and give you the tough racecar look you are after. For twin 4 barrel carburettors mounted sideways.

Performer RPM Series Fuel Pumps

Designed to match Performer Series carburetors, Edelbrock's High-Performance Street Fuel Pumps have a flow capacity of 110 gallons per hour. The unique valve design improves flow quantity and quality, and will support engines up to 550 hp. High-volume, 3/8" NPT inlet and outlet surpasses the capacity of conventional models. Produces 6 psi which is correct fuel pressure for street. For gasoline or mixed fuels only. NOTE: Use Edelbrock's Fuel Pump Kit ED1797 for tight engine compartments.

Victor Series Billet Aluminium 170 Fuel Pumps

Edelbrock Victor Series billet aluminium mechanical fuel pumps are for high performance racing applications. The 5/8"-18 inlet and outlet come with -8AN fittings installed to provide increased flow over street fuel pumps, and the base can be rotated to allow for various fuel line configurations. These pumps include a variety of additional inlet/outlet fittings including -6AN, inverted flare and 3/8" NPT, plus a copper crush washer for a leak-proof connection. These billet aluminium pumps produce 8.5-9 psi and require a pressure regulator such as our Fuel Pressure Regulator #8190 or #1727. They have a clear anodized finish with the Edelbrock logo laser engraved on the pump body. For use with gasoline or alcohol. Clockable lower housing can be rotated for best inlet/outlet alignment.

Small-Block Ford	ED17002
Small-Block Chrysler	ED17003

Victor Series Racing Fuel Pumps

Flow capacity for Edelbrock's 6-Valve Racing Fuel Pump is 130 gallons per hour as compared to conventional racing pumps at 114 gallons per hour. A must for drag racing, circle track racing, street machines or any application that demands a high-volume fuel delivery. High-volume 1/2" NPT inlet and outlet orifices surpass the capacity of conventional models. Also, the finest quality materials are used along with 6-valve pump body and large alcohol-proof diaphragm. Beautifully detailed with aircraft-type allen bolts. Produces 13 to 14 psi. For gasoline and alcohol. Requires Fuel Pressure Regulator.

MORSE CABLES

LIGHT WEIGHT MORSE CABLES & ACCESSORIES

Aeroflow's Lightweight Black cables are the perfect choice for positive load transfer with negligible lost motion. Requiring very little effort, these cables allow for 3" of travel and are ideal for any cable operated application requiring either pulling or pushing. Aeroflow's lightweight, positive, smooth operating cables are fitted with effective dynamic seals, making them well suited for use in extreme environments. A complete circle of reinforcement wires support and protect the Teflon® inner liner, ensuring negligible deflection during cable operation.

Aeroflow's Lightweight black cables are assembled with a stainless steel solid wire core. For proper fitment, Aeroflow's lightweight cables are available in many different lengths and are available in "clip-clip style" and "clip-threaded bulkhead" mounting options. A considerable selection of quality mounting hardware for correct installation is also available.

ELECTRIC FUEL PUMPS

LOW PRESSURE FUEL PUMPS

Great for use with low pressure fuel systems or for use as lift pump in EFI systems (ie surge tank feed). Designed to be used with unleaded or diesel fuels. Supplied with 100 micron pre-filter & mounting bolts. Inlet and outlet are 1/8" NPT female thread.

AF49-1033 35gph 4 to 7 psi.
AF49-1054 25gph 1.5 to 4 psi.

Micro Electric Fuel Pumps

Mr Gasket micro electric fuel pumps feature solid-state worry free electronics and self-priming design with simple two-wire hook up. Works on 12 Volt negative ground systems only. Includes fittings and mounting hardware along with easy to follow instructions. Works well as a fuel transfer pump and makes a great stand-alone or booster pump. Fits 5/16" fuel hose and includes inline filter.

Description	Part No.
Micro Electric Fuel Pump, 4 to 7 psi, 35 gph	MG12S
Micro Electric Fuel Pump, 4 to 7 psi, 35 gph (Diesel)	MG12D
Micro Electric Fuel Pump, 2 to 3.5 psi, 42 gph	MG42S

K&N INLINE FUEL PUMPS

K&N Inline Fuel Pumps provide premium quality fuel system hardware with a universal design that fits a wide variety of applications. Compatible with most fuels, this self-regulating 12-volt pump helps prevent vapor lock and flooding.

- Compatible with diesel, biodiesel, gasoline, E85, methanol, ethanol, alcohol and other fuels
- Universal design fits most applications
- Self-priming design provides a quiet running volume
- Eliminates vapor lock and flooding
- Fuel filter and installation hardware is included

Description	Part No.
Inline Fuel Pump, 1-2 psi, 15 GPH	KN81-0400
Inline Fuel Pump, 1.5-4 psi, 25 GPH	KN81-0401
Inline Fuel Pump, 4-7 psi, 32 GPH	KN81-0402
Inline Fuel Pump, 7-10 psi, 34 GPH	KN81-0403

Competition Series 72 GPH

- 12V negative ground
 - 72 Gallons per hour free flow
 - 1/4" NPT Thread inlet & outlet are up top for easier mounting & hose routing
 - No leak prone seal between motor and body
 - Liquid cooled motor for longer armature life
 - Dependable high flow performance for street
- ** NOTE: Different model carburetors may require the use of a pressure regulator

Carter Comp Series Electric Fuel Pump 4-6PSI FMP4070
Carter Comp Series Electric Fuel Pump 6-8PSI FMP4594

Competition Series Silver Pump

- 12V negative ground
- 100 Gallons per hour free flow
- 6-8 PSI operating pressure, No regulator
- A true high flow pump with out plumbing hassles
- 3/8" NPT Thread. Inlet & outlet fittings are on top for easier mounting & hose routing
- Silver & Black Dichromate for corrosion protection
- Smaller and lighter than competitive pumps
- No leak prone seal between motor and pump
- Liquid cooled motor - no armature burnout

Carter Comp Series Silver Electric Fuel Pump FMP4600HP

Competition Series Black Pump

- 12V negative ground * 100 Gallons per hour free flow
- 14-16 PSI operating pressure, use with a regulator
- 3/8" NPT Thread. Inlet & outlet fittings are on top for easier mounting & hose routing
- Black Dichromate & Epoxy Coat finish for superior corrosion protection
- Smaller and lighter than competitive pumps
- No leak prone seal between motor and pump body
- Liquid cooled motor - no armature burnout

Carter Comp Series Black Electric Fuel Pump FMP4601HP

COMPACT FUEL PUMPS

Silver

Aeroflow compact silver electric fuel pumps are designed for both carburetor and EFI engines, meeting most of your fuel system requirements for Street, Strip and Off Road Vehicles. The universal rotary vane design means it is engineered for constant use, long lasting performance and quiet operation. This unique design allows the fuel to cool the internals of the pump and with no points to burn out or shaft seals that are subject to deterioration which can lead to premature failure. The silver pump has an internal pressure-regulating valve pre-set to run 6-8 psi, and feature free-flow fuel delivery of up to 100 GPH. With female 3/8" NPT threads. Designed to handle unleaded, alcohol based fuels and diesel. Each fuel pump includes an installation kit which includes mounting hardware, mounting bracket, wiring and 12.5mm (1/2") barb fittings. overall diameter = 85mm overall height = 115mm Amp draw 3.5 to 4 amps

AF49-1064

Black

Aeroflow compact black electric fuel pumps are designed for both carburetor and EFI engines, meeting most of your fuel system requirements for Street, Strip and Off-Road Vehicles. The universal rotary vane design means it is engineered for constant use, long lasting performance and quiet operation. This unique design allows the fuel to cool the internals of the pump and with no points to burn out or shaft seals that are subject to deterioration which can lead to premature failure. The black pump has an internal pressure-regulating valve pre-set to run 14 psi but will require an aftermarket fuel pressure regulator. Featuring a free-flow fuel delivery of up to 100 GPH. With female 3/8" NPT threads. Designed to handle unleaded, alcohol-based fuels and diesel. Each fuel pump includes an installation kit which includes mounting hardware, mounting bracket, wiring and 12.5mm (1/2") barb fittings. overall diameter = 85mm overall height = 115mm Amp draw 3.5 to 4 amps

AF49-1065

HIGH PERFORMANCE ELECTRIC FUEL PUMPS

For most street and strip applications. 3/8" NPT inlet & outlet with external relief valve. Not for use with EFI.

Holley

MIGHTY MITE ELECTRIC FUEL PUMP

Holley Mighty Mite pumps are suited for tough, hard-working applications. From truck refrigeration units, marine generators, and gasoline and diesel industrial applications, these pumps have the proven performance, quality, and dependability that you can count on. They are self-priming and self-regulating at 9-11.5 psi and can deliver 33 GPH. Compatible with all types of fuels and additives, these pumps are the answer for your needs. Rugged solid state design pumps are a simple two wire hook-up and made in the USA.

A regulator may be needed for carbureted applications requiring less fuel pressure. We recommend the Holley 12-803 or 12-804 fuel pressure regulator.

- 120" Dry lift/ 9-11.5 PSI / 33 GPH
- Self-Priming and Self-Regulating
- Compatible with gasoline, diesel, bio diesel, E85, blended alcohol and fuel additives
- Operating temperature range of -40F to + 180F
- UL Certified
- 80 Micron stainless steel filter
- Transparent fuel bowl allows filter monitoring
- Corrosion resistant over 100 hours of salt spray
- Fuel filter and mounting hardware included

Description

Mighty Mite Fuel Pump 9-11.5 psi @ 33 GPH

Part No.
H012-430

97 GPH "RED" ELECTRIC FUEL PUMP

- New tumble polished billet look
- New lower housing casting for enhanced fuel flow
- Includes mounting bracket
- Improved design for street/strip applications
- Flows 97 GPH free flow, 71 GPH at 4 PSI
- Maximum pressure is 7 PSI, regulator is not required
- Weighs only 1.3Kg
- 3/8" NPT inlet and outlet ports
- Motor draws only 2 Amps current
- Repair kits are readily available
- NOT compatible with alcohol or methanol fuels
- Provides constant fuel flow with no pulsation
- Rotor/Vane pump design is more tolerant of contaminated fuels

Holley Red Electric Fuel Pump H012-801

110 GPH "BLUE" ELECTRIC FUEL PUMP

- New tumble polished billet look
- Improved design for street/strip applications
- Flows 110 GPH, 88 GPH at 9 PSI
- Maximum pressure is 14 PSI
- Includes H012-803 fuel pressure regulator
- 3/8" NPT inlet and outlet ports
- Motor draws only 3 Amps current
- Provides constant fuel flow with no pulsation
- Weighs only 1.36Kg
- Includes mounting bracket
- Repair kits are readily available
- NOT compatible with alcohol or methanol fuels
- New lower housing casting for enhanced fuel flow
- Rotor/Vane pump design is more tolerant of contaminated fuels

Holley Blue Electric Fuel Pump (With Regulator) H012-802
Holley Blue Electric Fuel Pump (No Regulator) H012-812

SERVICE PARTS

The following kits are available to service Holley Red, Blue & Black electric fuel pumps. These kits are complete and are made only from genuine Holley parts. Keep your Holley fuel pump operating like new with genuine Holley service kits.

140 GPH "BLACK" ELECTRIC FUEL PUMP

- New tumble polished billet look
- New lower housing casting for enhanced fuel flow
- Improved design for street/strip applications
- Flows 140 GPH free flow, 120 GPH at 9 PSI
- Maximum pressure is 14 PSI
- Fuel pressure regulator is required.
- 3/8" NPT inlet and outlet ports
- Motor draws only 4 Amps current
- Provides constant fuel flow with no pulsation
- Rotor/Vane pump design is more tolerant of contaminated fuels
- Weighs only 1.36Kg
- Includes mounting bracket
- Repair kits are readily available
- Compatible with alcohol or methanol fuels

Holley Black Electric Fuel Pump

H012-815

FUEL PUMP SPRING

This heavy-duty fuel pump spring boosts Holley electric fuel pump pressure from 12 to 19 psi and increases overall fuel volume. Suits Holley Blue and Black electric pumps.

Fuel Pump Spring, Holley Electric Fuel Pumps M065770

125 GPH Billet Base HP Fuel Pump

- Gerotor Design For Smooth Operation And Durability
- Flows 125 GPH Free Flow, 110 GPH at 7 PSI
- Rated Up to 700 Horsepower
- Black Mil-Spec Nickel Teflon Hard Anodized Billet Base
- Show Quality Chrome 12v Motor
- Profiled Black Powdercoated Mounting Bracket
- Laser Engraved Holley Logo & Inlet/Outlet Markings
- Less Noise than Traditional Vane Pumps
- 3/8" NPT Inlet & Outlet Fittings
- Compatible with Gasoline or Alcohol

125 GPH Billet Base HP Fuel Pump H012-125

150 GPH Billet Base HP Fuel Pump

- Gerotor Design For Smooth Operation And Durability
- Flows 150 GPH Free Flow, 140 GPH at 7 PSI
- Rated Up to 900 Horsepower
- Black Mil-Spec Nickel Teflon Hard Anodized Billet Base
- Show Quality Chrome 12v Motor
- Profiled Black Powdercoated Mounting Bracket
- Laser Engraved Holley Logo & Inlet/Outlet Markings
- Less Noise than Traditional Vane Pumps
- 3/8" NPT Inlet & Outlet Fittings
- Compatible with Gasoline or Alcohol

150 GPH Billet Base HP Fuel Pump H012-150

Quiet-Flo Electric Fuel

Pumps for Carburettor

Manufactured by Essex Industries, one of the most renowned fuel system manufacturers, these state of the art Electric Fuel Pumps offer maximum performance in a compact package. With anodized aluminium housings and high-quality internals, they are both strong and durable. Each pump is factory-tested and includes mounting brackets. The carbon fiber vanes and composite rotors give these pumps the added boost for maximum performance. The high quality construction results in a pump that is 4 to 14 dB quieter than competitors pumps at the same pressure. ED1791 is factory preset to 6.5 psi and no regulator is required. With a replaceable screen type inlet filter and the free flow rate of 120 GPH is sufficient to supply 600 hp. ED1792 has a free flow rate of 160 GPH, enough to feed a 1000 hp engine. This pump is factory preset to 12 psi and requires an external regulator such as the new Edelbrock regulator ED1727.

120 GPH (free flow), 3/8" NPT inlet/outlet for carburetted applications ED1791
160 GPH (free flow), 1/2" NPT inlet/outlet for carburetted applications ED1792

Electric Fuel Pumps

Comp Pump Series 60FI
The COMP PUMP 60FI Series Electric Fuel Pump is a high pressure 12-volt electric fuel pump intended for gasoline powered fuel injection applications. The quiet Gerotor design of the 60FI Series has a free flow rating of 60 GPH and must be run with a bypass/return type regulator. The 60FI Series includes a complete hardware package for easy installation.

Comp Pump Series 110

The COMP PUMP 110 Series Electric Fuel Pump is an excellent choice for high performance street and marine engines. The 110 Series is a 12-volt electric fuel pump intended for applications needing a high volume electric fuel pump. The quiet Gerotor design of the 110 Series has a free flow rating of 110 GPH. The 110 Series is internally bypassed and factory set to 7 PSI. The special design of the pump housing allows some limited adjustment of the output pressure.

Comp Pump Series 140

The COMP PUMP 140 Series Electric Fuel Pump is an excellent choice for high performance street, racing and marine engines. The 140 Series is a 12-volt electric fuel pump intended for application needing a high volume and high pressure electric fuel pump.

The quiet Gerotor design has a free flow rating of 140 GPH and must be run with a fuel pressure regulator. The pump assembly itself is a high efficiency Gerotor that provides stable output and pressure. The 140 Series is internally bypassed and factory set to 12 PSI. The special design of the pump housing allows some limited adjustments of the output pressure.

Comp Pump Series 250

The COMP PUMP 250 Series Electric Fuel Pump is designed for racing applications needing a high volume and high pressure 12-volt electric fuel pump. The 250 Series is externally bypassed and factory set to 16 PSI. The special design of the pump housing allows some limited adjustments of the output pressure. Because of the high pressure characteristics and free flow rating in excess of 250 GPH, the 250 Series must be run with a fuel pressure regulator. Choose from Mallory Fuel Pressure Regulators such as Part No. 4200 and 4201.

Street / Strip (SS) Fuel Pump

For carburetted powerplants making 200-750 HP with standard regulators and up to 1,000 HP with dynamic, bypass style regulators. Ideal for continuous duty, carburetted applications where more line pressure, fuel volume and reliability are desired. Ideal for your daily driver, street rod or demanding ET-bracket race car. **This pump is designed to be used with either a Bypass Regulator; P/N 13301 or one of our Carburetor Adjustable Regulators; P/N 13201 or 13205.** Fuel flow exceeds 900 lbs. per hour @ 13.5 Volts - more than 150 gallons per hour. Pump provides 14 PSI fuel pressure - perfect for high-G leaving cars. 3/8" NPT ports. Alcohol compatible. Ideal for dedicated nitrous fuel delivery. Low amperage draw.

Street / Strip (SS) Fuel Pump ARO11203

High Output (H/O) Billet Fuel Pump

For carburetted powerplants making 200-600 HP, without the use of a separate fuel pressure regulator. Similar to the popular S/S fuel pump P/N 11203, but internally regulated down to 7 PSI, the H/O fuel pump is ideal for carburetted, high output street cars and mild race cars alike.

High Output (H/O) Billet Fuel Pump, ARO11209

ELECTRIC IN-LINE EFI FUEL PUMP

These Holley universal, in-line fuel pumps are designed to work in-line, not inside the tank, so installation is a snap.

They should be mounted below the fuel level of the tank for a good gravity feed on the inlet side.

HO112-920 is for multipoint EFI systems and HO112-927 is for throttle body (TBI) injection.

- OE-proven design
- Lightweight, compact design
- 3/8" barbed fittings included
- Rubber isolator, mounting clamps and electrical hardware is included

Fuel Pump, 80GPH @ 15psi (400HP)
Fuel Pump, 67GPH @ 45psi (600HP)

HO12-927
HO12-920

255 LPH ELECTRIC IN-TANK EFI PUMP

This In-tank electric fuel pump is a high flow replacement for the Mitsubishi EVO II to EVO VI and is also suitable for use as a universal in-tank fuel pump for turbocharged EFI engines up to 750 horsepower. The pump uses a proven gerotor design while remaining compact enough to fit existing hanger assemblies without modification.

- 255 LPH Feeds up to 750 HP at 60 psi
- Supplied with Inlet Screen & Wiring Harness

In-Tank Fuel Pump 255 LPH (750HP)

HO12-919

HOLLEY IN-TANK FUEL PUMP

Holley offers a full line of high performance fuel pumps. These Holley electric in-tank fuel pumps have been designed to the highest quality standards to provide increased performance and fuel efficiency for most stock, turbo, and supercharged applications.

- Flows 100 GPH (460 LPM) at 40 psi
- Draws 13.5 amps at 40 psi
- Will feed up to 750 horsepower throttle body EFI unit (not intended for multipoint EFI)
- OE proven design
- Lightweight and compact
- Inlet and outlet barbed fittings included
- Rubber isolator, mounting clamps and electrical hardware included

HO12-929 460LPH at 40 psi E85/Gas/Petrol In-Tank Fuel Pump

DOMINATOR IN-LINE BILLET FUEL PUMP

Need to feed some serious horsepower? Have a nitrous or forced induction powerplant that also sees street duty? Holley's Dominator in-line fuel pumps are the answer! The patent pending twin pump design allows you to use one pump for cruising and both pumps when you activate the nitrous switch or start building boost! By staging the second pump, you eliminate the unnecessary recirculating and heating of extra fuel which can lead to poor performance and hot fuel issues.

- Improved hot fuel handling
- Billet aluminium construction for durability and good looks
- 10 AN O-ring inlet/outlet for high flow and superior sealing
- Excellent for use with carbureted or EFI applications
- Fully submersible in-tank for custom applications, space savings and less plumbing
- Compatible with 12v to 18.5v systems for street or race use
- Compact (7.66" Long x 5" Wide x 2.5" Tall) for easy installation on frame rails or other tight areas
- Twin pump design allows the use of both pumps simultaneously or independently - second pump can be activated on demand for power adders such as nitrous or boost
- Patent pending dual pump technology
- Proven durability beyond 3,000 hours in gasoline
- Weighs only 5.1 lbs.
- Max Current draw is 28 Amps

Holley HP billet fuel pumps

These Holley HP billet fuel pumps are designed to be the perfect companions to your carburetor or fuel injected street vehicle, race car, off-road truck, or any engine needing fuel. They feature OEM gearotor technology, which yields lightweight, quiet operation and excellent durability. The pumps are manufactured from billet aluminum and have a black/clear anodized finish for corrosion protection. Compatible with 12 V to 18 V electrical systems, the Holley HP billet fuel pumps can be used on both street and race vehicles. With proven durability beyond 3,000 hours in gasoline and diesel engines, the fuel pumps will provide high flow at high pressure for the life of your engine.

HO12-890 96 GPH @ 8 psi (76 GPH @ 43 psi EFI)

Quiet-Flo Electric

Fuel Pumps for EFI

These EFI fuel pumps are also manufactured by Essex Industries.

With anodized aluminium housings and high-quality internals, they are both strong and durable. Each pump is factory-tested and includes mounting brackets. ED1790 features a -10 AN inlet/outlet and a flow rate of 80 GPH at 45 psi for use with high-hp fuel injected applications. The in-line design keeps the pump motor and components cool even under harsh conditions. The new Victor EFI fuel pump ED1794 is rated at 120 GPH at 45 psi and has -12AN inlet/outlets and is compatible with all grades of gasoline and methanol type fuels.

80 GPH at 45 psi, -10 AN inlet/outlet for EFI applications ED1790
120 GPH at 45 psi, -12 AN inlet/outlet for EFI applications ED1794

HOLLEY IN-TANK RETROFIT FUEL MODULE

Are you interested in an EFI retrofit kit, but just can't get past the complication of the fuel system? Holley is proud to introduce their Universal In-Tank Retrofit Fuel Modules! Available in return and returnless versions, you can rest assured Holley has the solution you need for your EFI fuel pump woes. Now you can convert your factory tank or fuel cell to an in-tank EFI fuel system quickly and easily! And- add the benefits of a Holley Hydramat in

the process! The conversion is easily accomplished with basic tools and requires no welding or fabrication. The billet aluminium module design includes a billet pump hanger bracket to control pump vibration while also providing a low profile design to fit where space is at a premium. Holley's innovative clamping system and integrated fuel pump makes it easy. Once installed, hook up your fuel lines and your power source/ground and you're off and running! NO hassle! HO12-130 & HO12-131 Supports up to 550 EFI or 700 Carb HP (@ 60 PSI) at 13.5 Volts / 10.4 AMP Draw) of course there are many variables, estimates are based on gasoline. Individual systems will vary based on fuel system design, regulator type, fuel cell location, etc... HO12-133 Supports up to 875 EFI or 1100 Carb HP (@ 60 PSI) at 13.5 Volts / 16.9 AMP Draw) Of course there are many variables, estimates are based on gasoline. Individual systems will vary based on fuel system design, regulator type, fuel cell location, etc...

- The easiest way to convert your vehicle to an in-tank, EFI fuel system
- Installs in any fuel tank from 7.25" to 12" deep to fit a wide variety of applications
- The low profile design is only 1.275" thick above the tank mounting surface for added clearance when needed
- The innovative clamping system allows you to locate the module anywhere in the tank beside your existing sending unit
- The clamping system allows you to rotate the unit 360 degrees for easier clocking of the plumbing and wiring locations under your ride
- Includes innovative Holley Hydramat to ensure consistent fuel supply. The 3" x 15" HydraMat mounting flange has 6 clocking pin locations to allow for 360 degree adjustment to clear sending unit levels or any tank floor restrictions that you might encounter
- Black anodized aluminium construction for corrosion resistance and long lasting good looks
- 1/4" NPT ports for a wide variety of plumbing options
- Ideal for Terminator EFI, Sniper EFI, MSD Atomic EFI or any TBI of EFI conversion
- Optional roll over valve available
- Two different fuel pumps are available to match your requirements - 255LPH or 400LPH for both return and returnless style systems
- For Returnless system
- Eliminates the need for a return line and conventional fuel pressure regulator. Thus, simplifying your installation
- Includes an internal fuel pressure regulator preset at 60 psi for a wide variety of applications. No return line required!

UNIVERSAL IN-TANK FUEL PUMP FAST307032

Universal In Line Gerotor Type

Universal In Line Electric Fuel Pump features

- 12 Volt • 4-6 PSI • 30 Gallons per hour • Operates using leaded and unleaded petrol, diesel fuels and fuel boosters • Simple installation on vehicle • Complete mounting package included • Quiet operation • Lightweight - 12-1/2 ounces • Tolerant to over voltage • Gas filter included or equivalent must be used • Corrosion resistant
- Will operate at 6 volts with resultant decrease in pressure/flow • Positive displacement gerotor-type gear pump - self priming • DC permanent magnet wet motor • Internal pressure regulator valve
- Glass reinforced thermoplastic inlet and outlet
- Filter mounted on pump inlet * Positive or negative ground
- Recommended for 4, 6, and small displacement 8 cylinder engines

Carter Universal In Line Electric Fuel Pump FMP60430

IN-LINE EFI FUEL PUMP

Universal in-line EFI fuel pump suitable for naturally aspirated or forced induction engines up to 600 horsepower.

This pump is designed for external mounting and should be mounted below the fuel tank for gravity feed. Flows 255 LPH (67 GPH) at 45 psi.

- Supports Up To 600 Horsepower
- Lightweight, Compact Design
- Supplied with Rubber Isolator & Mounts
- 3/8" Barbed Fittings Included

External EFI Fuel Pump FMP4604HP

BRUSHLESS FUEL PUMP

Aeroflow brushless AF49-1214 fuel pump produces 420LPH (110GPH) of fuel flow and operating at 72.5PSI (4.99BAR). Support 900 horsepower. Includes a check valve •Compatible with Unleaded, E85 and Methanol Fuels (Due to the dielectric properties of Alcohol fuel like E85, fuel pump service life will be reduced and filter maintenance must be increased.

- M18 x 1.50mm Inlet
- M12 x 1.50mm Outlet
- Body Length is 153mm (6-1/64")
- Diameter is 60mm (2-3/64")
- Electrical connections: positive terminal is M6 and negative terminal is M5
- Amp current draw at 30PSI (2BAR) 7 amps.

Filter Socks

Aeroflow's filter sock is designed to be used with the AF49-1014 or the Bosch 044 high performance fuel pumps. This high flow 60 micron synthetic filter screen features an internal support to keep the filter from sucking closed and reducing fuel flow. The kit is supplied with an anodised black M18 x 1.5 adapter that is safe for use with corrosive fuels and seals with a supplied nylon washer. Screen size is 135mm long by 57mm (2-1/4") wide and gives you reassurance on fuel pump life, a perfect addition when installing fuel pumps in-tank.

Fuel Pump Accessories

- AF59-1041** 340 lph (AF49-1041) standard inlet screen
- AF59-1042** 340 lph (AF49-1041) Large 90 x 90mm inlet screen
- AF49-1037** M18x1.5 fuel pump inlet screen

AF49-1046 9.5mm (3/8") Diameter. 240mm (9-7/16") length of hose and 2 x hose clamps

AF49-1060-1M 7.9mm (5/16") Diameter. 1m (3ft 9/32") length

IN-TANK FUEL HOSE KIT

Most rubber fuel lines are only designed to handle fuel on the interior of the hose, which can be damaged if the exterior is exposed to fuel especially alcohol based fuels. The Aeroflow Performance in-tank hose kits are capable of handling multiple types of fuels from E85 to diesel in fully-immersed, mobile and stationary applications.

FUEL PUMP INLET
FILTER SCREEN ADAPTER

The Aeroflow Performance fuel pump inlet screen adapter & filter sock is designed for remote mounting a fuel filter screen inside a fuel tank or fuel cell. When a new 40mm fuel pump is installed in some cases the fuel pump is not going to sit low enough to pick up fuel from the bottom of your tank. This black anodized billet aluminum adapter secures to the filter sock with a star washer and a preloaded stainless steel bracket design. The adapter uses a machined barb 3/8" (9.52mm) nipple and features an integrated O-ring for sealing. Can be used with the AF64-2170BLLK inlet fuel pump adapter.

AF64-2171BLLK
FUEL PUMP INLET ADAPTER

The Aeroflow Performance fuel pump inlet adapter is designed for remote mounting a fuel filter screen inside a fuel tank or fuel cell. When a new 40mm fuel pump is installed in some cases the fuel pump is not going to sit low enough to pick up fuel from the bottom of your tank.

This black anodized billet aluminum adapter secures to the pump inlet with a star washer and a preloaded stainless steel bracket design. The adapter uses a machined barb 3/8" (9.52mm) nipple and features an integrated O-ring for sealing. NOTE: It is NOT intended to turn an in-tank fuel pump into an external inline fuel pump. Will only suit 40mm diameter fuel pumps such as AF49-1040, AF49-1041, AF49-1042, AF49-1057.

AF64-2170BLLK
NISSAN FUEL PUMP
CONVERSION WIRING HARNESS

Fuel pump wiring is one of the most neglected and misunderstood aspects of any performance fuel system upgrade. It's also one of the leading causes of fuel pump failure due to incorrect wiring.

This conversion wiring harness from Aeroflow Performance creates a simple and easy way to convert your factory OEM fuel pump to an aftermarket 40mm in tank fuel tank. One end features the Nissan OEM fuel pump 2 pin connector which should plug into the factory wiring harness. The other end features a Delphi 2 Pin female connector which will plug into a 40mm fuel pump such as our 450LPH or 525LPH as well as popular brands like the Walbro pumps. Made from 14-gauge wire with Viton heat shrink that accepts E85 and unleaded fuels. This wiring harness is designed to handle up to 30amp that these 40mm fuel pumps put out.

AF49-1075 extension wiring harness total length 360mm
UNIVERSAL EFI FUEL DELIVERY KIT

Aeroflow has designed a complete fuel delivery kit that gives you everything you need to supply fuel to your EFI throttle body. This supplies enough fuel for up to 600hp. Note: when using this fuel pump a return line to the fuel tank is required.

The Kit includes:

- 1 x AF49-1014 external fuel pump.
- 1 x Billet bracket to suit external fuel pump
- 1 x 89mm (3-1/2") billet pro filter 100 micron pre-pump filter
- 1 x Billet P-clamp to suit pro filter
- 1 x Billet after pump fuel filter 30 micron
- 1 x -6 90 degree bulkhead with nut
- 2 x -6 to 3/8" straight barb adapters
- 2 x -6 to 3/8" 45 degree barb adapters
- 2 x -8ORB to 3/8" straight barb to suit pro filter
- 1 x M18 x 1.5mm to 3/8" straight barb to suit pump inlet
- 1 x M12 x 1.5mm to 3/8" straight barb to suit pump outlet
- 2 x 14mm (9/16") ID stat-o-seals
- 10 x EFI fuel line clamps
- 15m (49.2ft) 400 series -6 (9.52mm 3/8") rubber fuel hose

AF66-40005
EFI FUEL PUMP SILENCER

This solid mounted rubber silencer can be used with externally mounted Aeroflow and Bosch EFI fuel pumps for noise reduction. Suits externally mounted 60mm fuel pumps such as AF49-1015, AF49-1015B and AF49-1014.

AF49-1019

325 STEALTH ELECTRIC FUEL PUMPS

The New Aeromotive 325 Stealth Fuel Pump is similar to the popular 340 Stealth Pumps, the 325 is a compact body design, high-output, in-tank fuel pump that fits many popular late model EFI applications. The Aeromotive 325 is a high-performance pump that bolts into many existing hanger assemblies. Compared to other aftermarket pumps, the 325 boasts a significant increase in performance, flowing more than 325 lph at 40 psi. This pump is ideal for applications requiring more flow while retaining the factory lines and mounting provisions available in the Original Equipment (O.E.) configuration. The 325 is also perfect for use as a replacement fuel pump for applications that require more flow to support forced air power adders such as turbo and superchargers.

- Now E85 Compatible
- Compact 38mm body for OE fitment
- Fits a wide range of vehicles where popular aftermarket pumps are applicable
- Flows 325 lph @ 40 psi
- Internal check valve
- Quiet, durable and reliable turbine impeller
- Designed for in-tank use only
- Can be used with carbureted or EFI applications
- Can be used in pulse modulated applications
- Specs: Fuel Injected Engines up to 800 HP – naturally aspirated up to 700 HP – forced air induction

325 Stealth Universal Fuel Pump ARO11565

340 STEALTH ELECTRIC FUEL PUMPS

The Aeromotive 340 Stealth Fuel Pump is a high-output, in-tank, electric fuel pump that fits most popular EFI applications. The Aeromotive 340 is a compact, lightweight pump that bolts into many existing hanger assemblies. (to find your vehicle, see the applications guide below) What sets the 340 Stealth Pump apart is its superior flow throughout a wide pressure range. Compared to other popular aftermarket pumps, at 40 psi the 340 boasts more than 340 lph. That's over 30% more flow. This pump is ideal for applications requiring more flow while retaining the factory lines and mounting provisions available in the Original Equipment (O.E.) configuration. The 340 is also perfect for use as a universal replacement for applications that require more flow to support forced air power adders such as turbo and supercharged applications.

- Fits most vehicles where popular aftermarket pumps are applicable.
- Offset Inlet, In-line with outlet
- E85 Compatible
- OEM 39mm Body
- Includes universal filter sock – may not fit in some applications (see OEM filter replacement recommendations)
- Designed for in-tank use only
- Can be used with carbureted or EFI applications
- Turbine pump mechanism increases durability and can be used in pulse modulated applications.

Description	Part No.
340 Stealth Fuel Pump (Center Inlet)	ARO11540
340 Stealth Fuel Pump (Offset Inlet)	ARO11541
340 Stealth Fuel Pump (Offset Inlet/Outlet)	ARO11542
340 Stealth Fuel Pump (Offset Inlet/Outlet) GM Application	ARO11569

A1000 Fuel Pump

This is the pump that started it all. Durable, reliable, good looking and it supports high horsepower. Perfect for the daily driver that doesn't run like a daily driver.

For fuel injected engines: up to 1100 HP naturally aspirated up to 800 HP forced air induction. For carburetted engines: up to 1300 HP - naturally aspirated up to 1100 HP - forced air induction Number one at the track and on the street. Flows 600 lbs. per hour @ 13.5 volts and 45 psi. Flows 800 lbs. per hour @ 13.5 volts and 8 psi. Features AN-10 inlet and outlet ports.

For EFI engines use regulator P/N ARO13101 or ARO13109, carbureted P/N ARO13204.

Fully submersible for custom, in-tank placement.

Perfect for "blow-through" carburetted engines up to 1100 HP.

Billet Speed Pump Controller (P/N ARO16302) recommended for EFI street duty.

ARO11101	A1000 Fuel Pump
ARO11101	A1000 Fuel Pump, Red Finish
ARO11151	A1000 Fuel Pump Platinum Finish

* Also available in our PLATINUM SERIES fully-polished, show quality finish, Platinum Series

Tsunami Fuel Pump

For fuel injected applications with base pressure settings between 30 and 65 PSI. Designed to fuel anything from 150 to 700 horsepower naturally aspirated, up to 500 horsepower forced induction.

Feed your beast with the new Tsunami EFI Fuel Pump.

Beautiful, durable, and reliable, this new fuel pump will fuel the fire whether it's naturally aspirated, nitrous enhanced, blown or turbocharged

Tsunami Fuel Pump ARO11103

Aeromotive 700 hp EFI

External Universal

Feed your beast with these new Aeromotive 700 hp EFI fuel pumps. Beautiful, compact, durable, and reliable, these fuel pumps will fuel the fire whether it's naturally aspirated, nitrous enhanced, blown, or turbocharged. These pumps are for fuel-injected applications with base pressure settings between 30 and 65 psi. Designed to fuel anything from 150 to 700 hp, these pumps flow over 450 lbs./hr. at 45 psi.

ARO11106 AEROMOTIVE EFI FUEL PUMP 700HP IN LINE, -8 INL AND -6 OUT

Pro-Series Fuel Pump

For high horsepower racing engines, EFI or carburetted:

For fuel injected engines: up to 1800 HP - naturally aspirated

up to 1400 HP - forced air

induction For carburetted engines:

Up to 2100 HP - naturally aspirated

Up to 1700 HP - forced air

induction The "ultimate" in-line fuel pump,

features our state-of-the-art, patent-pending "dual chamber" pump

design. This is simply the most powerful, highest flowing in-line fuel

pump available anywhere.

Flows more than 1000 lbs. per hour @ 13.5 Volts and 45 PSI.

Flows more than 1200 lbs. per hour @ 13.5 Volts and 8 PSI.

Features - 12 AN O-ring boss inlet/outlet ports.

Body is beautifully plated with our electroless nickel process.

Comes complete with two -12 AN tapered flare fittings and O-rings.

For EFI engines use regulator P/N 13110, carbureted P/N 13202.

Fully submersible for custom, in-tank placement.

Billet Pump Speed Controller (P/N 16302.) required for EFI street

duty.

ARO11102 Pro-Series Fuel Pump.

Eliminator Fuel Pump

For high horsepower

Strip/Street applications, EFI or carburetted. Designed for

forced air induction machines

running on the street and at the

track. The Eliminator gives you

about 25% more flow at pressure compared to

the A1000. The continuous duty, "street warrior",

supports more HP in a true street car than any other pump built.

Billet Pump Controller (P/N 16302) recommended to keep fuel cool

on long trips.

For fuel injected engines: Up to 1600 HP - naturally aspirated

Up to 1100 HP - forced air induction

For carburetted engines: Up to 1800 HP - naturally aspirated

Up to 1500 HP - forced air induction

Pump flow exceeds 800 lbs. per hour @ 13.5 Volts and 45 PSI.

Pump flow exceeds 1,000 lbs. per hour @ 13.5 Volts and 8 PSI.

Inlet port is -12 AN O-ring boss, outlet port is -10 AN O-ring boss.

For EFI engines use regulator P/N 13110, carburetted P/N 13202.

Fully submersible for custom, in-tank placement.

ARO11104 Eliminator Fuel Pump

IN TANK STEALTH PUMP ASSEMBLIES

These revolutionary designs incorporate the same advantages all our Stealth Fuel Systems provide by placing the fuel pump and pre-filter inside the tank. However, this new design allows for multiple mounting options in almost any fuel tank or cell. Designed for the custom tank builder or fabricator, the universal assembly uses O-Ring clamps to positively seal the provided 3/4" tube to the both the filter pickup and the fuel pump inlet, allowing for perfect placement of the pickup and ensuring superior performance. Proper baffling and clearance will be required, but installation could not be simpler with this universal design.

Part No: Description

ARO18668 A1000 Fuel pump

ARO18669 Eliminator Fuel Pump

Pumps have same flow specs as external pumps on previous

page. SPECS: 100 Micron stainless steel Fuel Filter / Pickup

20" long 3/4" aluminum tube w/ 90 degree bend

Gaskets, mounting ring, bolts and washers for a positive seal

mounting

AEROMOTIVE BRUSHLESS FUEL PUMPS

A1000 Brushless External Fuel Pump

Brushless motors employ sensors to monitor rotor angle to provide faster and more reliable phase shifting, producing more torque capacity and motor efficiency. Instead of the armature rotating, in a brushless motor the magnets rotate around the armature and the motor controller manages the phase shift to keep the motor rotating under load (load is related to pressure in a fuel pump). With more torque per watt and a higher torque to weight ratio, brushless motors produce lower noise and deliver higher reliability. With a higher level of efficiency, down to fractions of a second in design speed control, the new Aeromotive brushless fuel pumps provide precise control of fuel pump RPM as pressure rises, better maintaining pump RPM and flow, producing a flatter flow curve. Tight tolerances result in less current draw, less heat and extended life. Now there is the ability to upgrade to a premium brushless pump for faster, more reliable and uninterrupted fuel delivery with less power consumption and potential for wear or failure.

NEW TRUE VARIABLE SPEED - Aeromotive's line of brushless pumps are available with two different built-in controllers: The Standard Configuration of Aeromotive's Brushless Controllers, which provides continuous full-speed operation, and the New True Variable Speed Controller (TVS), which offers the advantage of pump speed control via a 0-5V analog DC input signal. The TVS controller capitalizes on our existing brushless technology by reducing fuel flow during low-demand, decreasing an already low current draw, and, therefore, minimizing the introduction of heat even further.

A1000 Brushless External Fuel Pump

- Supports up to 1300 FWHP EFI – naturally aspirated
- Supports up to 1000 FWHP EFI – forced air induction
- Supports up to 1500 FWHP Carburetted – naturally aspirated
- Supports up to 1200 FWHP Carburetted – forced air induction
- E85 Compatible, reduce max FWHP by 30%
- Lighter than the traditional A1000 pump.
- Reduced current draw at higher, EFI pressures.
- Extended service life in methanol and ethanol.
- Integral, external brushless controller for clean installation, cooler fuel and enhanced reliability.
- Quieter than the traditional A1000 pump.
- ORB-10 inlet and outlet ports.
- EFI rated flow of 700 lbs./hr. @ 45 psi, 13.5 volts
- Carb rated flow of 900 lbs./hr. @ 9 psi, 13.5 volts

- A1000 Brushless External Round Body Fuel Pump** ARO11124
- A1000 Brushless External Signature Body Fuel Pump** ARO11183
- A1000 Brushless External Round Body Fuel Pump, Variable Speed** ARO11189
- A1000 Brushless External Signature Body Fuel Pump, Variable Speed** ARO11193

Eliminator Brushless External Fuel Pump

- Supports up to 1900 FWHP EFI – naturally aspirated
- Supports up to 1400 FWHP EFI – forced air induction
- Supports up to 2300 FWHP Carburetted – naturally aspirated
- Supports up to 1700 FWHP Carburetted – forced air induction
- E85 Compatible, reduce max FWHP by 30%
- Lighter than the traditional Eliminator pump.
- Reduced current draw at higher, EFI pressures.
- Extended service life in methanol and ethanol.
- Integral, external brushless controller for clean installation, cooler fuel and enhanced reliability.
- Quieter than the traditional Eliminator pump.
- ORB-12 inlet and ORB-10 outlet ports.
- EFI Rated flow of 1,000 lbs./hr. @ 45 psi, 13.5 volts
- Carb Rated Flow of 1,300 lbs./hr. @ 9 psi, 13.5 volts

- Eliminator Brushless External Round Body Fuel Pump** ARO11180
- Eliminator Brushless External Signature Body Fuel Pump** ARO11184
- Eliminator Brushless External Round Body Fuel Pump, Variable Speed** ARO11190
- Eliminator Brushless External Signature Body Fuel Pump, Variable Speed** ARO11194

3.5 Brushless Gear Pump External Mount

- Supports up to 2400 FWHP EFI – naturally aspirated
- Supports up to 1800 FWHP EFI – forced air induction
- Supports up to 2600 FWHP Carburetted – naturally aspirated
- Supports Up to 2000 FWHP Carburetted – forced air induction
- E85 Compatible, reduce max FWHP by 30%
- Lighter than the traditional Pro-Series pump.
- Reduced current draw at higher, EFI pressures.
- Extended service life in methanol and ethanol.
- New integral spur-gear pumping mechanism.
- 90-PSI continuous operating pressure and up to 150-PSI peak pressure, base plus boost.
- Integral, external brushless controller for clean installation, cooler fuel and enhanced reliability.
- ORB-12 inlet and ORB-10 outlet ports.
- EFI Rated flow of 1,250 lbs./hr. @ 40 psi, 13.5 volts
- Carb Rated Flow of 1,350 lbs./hr. @ 9 psi, 13.5 volts

- 3.5 Brushless Gear Pump External Round Body Fuel Pump** ARO11181
- 3.5 Brushless Gear Pump External Signature Body Fuel Pump** ARO11185
- 3.5 Brushless Gear Pump External Round Body Fuel Pump, Variable Speed** ARO11191
- 3.5 Brushless Gear Pump External Signature Body Fuel Pump, Variable Speed** ARO11195

5.0 Brushless Gear Pump External Mount

- Supports up to 3400 FWHP EFI – naturally aspirated
- Supports up to 2600 FWHP EFI – forced air induction
- Supports up to 3600 FWHP Carburetted – naturally aspirated
- Supports up to 2700 FWHP Carburetted – forced air induction
- E85 Compatible, reduce max FWHP by 30%
- Lighter than the traditional external mount pumps.
- Reduced current draw at higher, EFI pressures.
- Extended service life in methanol and ethanol.
- New integral spur-gear pumping mechanism.
- 90-PSI continuous operating pressure and up to 150-PSI peak pressure, base plus boost.
- Integral, external brushless controller for clean installation, cooler fuel and enhanced reliability.
- ORB-12 inlet and ORB-10 outlet ports.
- EFI Rated flow of 1,700 lbs./hr. @ 40 psi, 13.5 volts
- Carb Rated Flow of 1,850 lbs./hr. @ 9 psi, 13.5 volts

- 5.0 Brushless Gear Pump External Round Body Fuel Pump** ARO11182
- 5.0 Brushless Gear Pump External Signature Body Fuel Pump** ARO11186
- 5.0 Brushless Gear Pump External Round Body Fuel Pump, Variable Speed** ARO11192
- 5.0 Brushless Gear Pump External Signature Body Fuel Pump, Variable Speed** ARO11196

7.0 GPM BRUSHLESS SPUR GEAR FUEL PUMP

- True Variable Speed Control
- E85 Compatible, reduce max FWHP by 30%
- Lighter than the traditional external mount pumps.
- Reduced current draw at higher, EFI pressures.
- Extended service life in methanol and ethanol.
- New integral spur-gear pumping mechanism.
- 90-PSI continuous operating pressure and up to 150-PSI peak pressure, base plus boost.
- Integral, external brushless controller for clean installation, cooler fuel and enhanced reliability.
- ORB-12 inlet and ORB-10 outlet ports.
- Requires straight 12-VDC to 16-VDC power supply.
- Not compatible with pulse modulated systems or fuel pump speed controllers.

- Description** Part No.
- 7.0 Brushless Gear Pump External Signature Body Fuel Pump, Variable Speed** ARO11197

10.0 GPM BRUSHLESS SPUR GEAR FUEL PUMP, VARIABLE

- True Variable Speed Control
- E85 Compatible, reduce max FWHP by 30%
- Lighter than the traditional external mount pumps.
- Reduced current draw at higher, EFI pressures.
- Extended service life in methanol and ethanol.
- New integral spur-gear pumping mechanism.
- 90-PSI continuous operating pressure and up to 150-PSI peak pressure, base plus boost.
- Integral, external brushless controller for clean installation, cooler fuel and enhanced reliability.
- ORB-12 inlet and ORB-10 outlet ports.
- Requires straight 12-VDC to 16-VDC power supply.
- Not compatible with pulse modulated systems or fuel pump speed controllers.

- Description** Part No.
- 10.0 Brushless Gear Pump External Signature Body Fuel Pump, Variable Speed** ARO11198

STEALTH BRUSHLESS INTANK FUEL PUMP

Aeromotive's True Variable Speed Controller offers the advantages of built-in pump speed control via a dedicated 0-5V analog DC input signal. The Controller capitalizes on our existing brushless technology by reducing fuel flow during low engine demand and decreasing an already low current draw, therefore minimizing both motor heat the introduction of environmental via reduced fuel recycling.

- E85 Compatible, reduce max FWHP by 30%
- Lighter than the traditional fuel pumps.
- Reduced current draw at higher, EFI pressures.
- Extended service life in methanol and ethanol.
- Integral, external brushless controller for clean installation, cooler fuel and enhanced reliability.
- Quieter than the traditional Eliminator Pump.
- ORB-10 outlet port.
- Requires straight 12-VDC to 16-VDC power supply.
- A1000 Pump, EFI rated flow of 700 lbs./hr. @ 45 psi, 13.5 volts
- A1000 Pump, Carb rated flow of 900 lbs./hr. @ 9 psi, 13.5 volts
- Eliminator Pump, EFI Rated flow of 1,000 lbs./hr. @ 45 psi, 13.5 volts
- Eliminator Pump, Carb Rated Flow of 1,300 lbs./hr. @ 9 psi, 13.5 volts

- Description** Part No.
- A1000 Brushless Fuel Pump, Variable Speed** ARO18050
- Eliminator Brushless Fuel Pump, Variable Speed** ARO18051

A1000 Brushless Stealth Fuel Cell Fuel Pump

Designed as a direct drop-in replacement for the any Aeromotive Stealth Fuel Cell, including COPO, Cobra Jet or Drag Pak race cars. This configuration is also a great option when building a 10" deep custom fuel cell.

- The A1000 performance you expect and more:
- E85 Compatible, reduce max FWHP by 30%
- Lighter than the traditional A1000 pump.
- Reduced current draw at higher, EFI pressures.
- Extended service life in methanol and ethanol.
- Integral, external brushless controller for clean installation, cooler fuel and enhanced reliability.
- Quieter than the traditional A1000 Stealth Pump.
- ORB-10 outlet port.
- EFI rated flow of 700 lbs./hr. @ 45 psi, 13.5 volts
- Carb rated flow of 900 lbs./hr. @ 9 psi, 13.5 volts
- Supports up to 1300 FWHP EFI – naturally aspirated
- Supports up to 1000 FWHP EFI – forced air induction
- Supports up to 1500 FWHP Carburetted – naturally aspirated
- Supports up to 1200 FWHP Carburetted – forced air induction

- A1000 Brushless Stealth Fuel Cell Fuel Pump** ARO18023

A1000 & ELIMINATOR UNIVERSAL BRUSHLESS ADJUSTABLE IN-TANK FUEL PUMP

- Lighter than the traditional A1000 & Eliminator pump.
- Universal filter pickup, for an overall height adjustment from 10-16in.
- Reduced current draw at higher, EFI pressures.
- Extended service life in methanol and ethanol.
- Integral, external brushless controller for clean installation, cooler fuel and enhanced reliability.
- Quieter than the traditional A1000 & Eliminator Stealth Pump.
- ORB-10 outlet port.
- Requires straight 12-VDC to 16-VDC power supply.
- Not compatible with pulse modulated systems or fuel pump speed controllers.

- A1000 Pump, EFI rated flow of 700 lbs./hr. @ 45 psi, 13.5 volts
- A1000 Pump, Carb rated flow of 900 lbs./hr. @ 9 psi, 13.5 volts
- Eliminator Pump, EFI Rated flow of 1,000 lbs./hr. @ 45 psi, 13.5 volts
- Eliminator Pump, Carb Rated Flow of 1,300 lbs./hr. @ 9 psi, 13.5 volts

Aeromotive's True Variable Speed Controller offers the advantages of built-in pump speed control via a dedicated 0-5V analog DC input signal. The Controller capitalizes on our existing brushless technology by reducing fuel flow during low engine demand and decreasing an already low current draw, therefore minimizing both motor heat the introduction of environmental via reduced fuel recycling.

- Description** Part No.

ELIMINATOR BRUSHLESS

STEALTH FUEL CELL FUEL PUMP

Designed as a direct drop-in replacement for the any Aeromotive Stealth Fuel Cell, including COPO, Cobra Jet or Drag Pak race cars. This configuration is also a great option when building a 10" deep custom fuel cell.

- Lighter than the traditional Eliminator pump.
 - Reduced current draw at higher, EFI pressures.
 - Extended service life in methanol and ethanol.
 - Integral, external brushless controller for clean installation, cooler fuel and enhanced reliability.
 - Quieter than the traditional Eliminator Pump.
 - ORB-10 outlet port.
 - Requires straight 12-VDC to 16-VDC power supply.
 - Not compatible with pulse modulated systems or fuel pump speed controllers.
 - Supports up to 1900 FWHP EFI – naturally aspirated
 - Supports up to 1400 FWHP EFI – forced air induction
 - Supports up to 2300 FWHP Carburetted – naturally aspirated
 - Supports up to 1700 FWHP Carburetted – forced air induction
- Eliminator Brushless Stealth Fuel Cell Fuel Pump**
ARO18024

5.0 BRUSHLESS GEAR PUMP STEALTH FUEL CELL FUEL PUMP

Brushless motors employ sensors to monitor rotor angle to provide faster and more reliable phase shifting, producing more torque capacity and motor efficiency. Instead of the armature rotating, in a brushless motor the magnets rotate around the armature and the motor controller manages the phase shift to keep the motor rotating under load (load is related to pressure in a fuel pump). With more torque per watt and a higher torque to weight ratio, brushless motors produce lower noise and deliver higher reliability. With a higher level of efficiency, down to fractions of a second in design speed control, the new Aeromotive brushless fuel pumps provide precise control of fuel pump RPM as pressure rises, better maintaining pump RPM and flow, producing a flatter flow curve. Tight tolerances result in less current draw, less heat and extended life. Now there is the ability to upgrade to a premium brushless pump for faster, more reliable and uninterrupted fuel delivery with less power consumption and potential for wear or failure. Lighter than the traditional Pro-Series pumps.

- Lighter than the traditional Pro-Series pumps.
- Reduced current draw at higher, EFI pressures.
- Extended service life in methanol and ethanol.
- New integral spur-gear pumping mechanism.
- 90-PSI continuous operating pressure and up to 150-PSI peak pressure, base plus boost.
- Integral, external brushless controller for clean installation, cooler fuel and enhanced reliability.
- ORB-10 outlet port.
- Requires straight 12-VDC to 16-VDC power supply.
- Not compatible with pulse modulated systems or fuel pump speed controllers.

5.0 Brushless Gear Pump Stealth Fuel Cell Fuel Pump

ARO18026

BRUSHLESS 5.0 SPUR GEAR PUMP WITH FUEL CELL PICKUP AND VARIABLE SPEED CONTROLLER

Aeromotive's True Variable Speed Controller offers the advantages of built-in pump speed control via a dedicated 0-5V analog DC input signal. The Controller capitalizes on our existing brushless technology by reducing fuel flow during low engine demand and decreasing an already low current draw, therefore minimizing both motor heat the introduction of environmental via reduced fuel recycling.

- E85 Compatible, reduce max FWHP by 30%
 - Lighter than the traditional Pro-Series pumps.
 - Reduced current draw at higher, EFI pressures.
 - Extended service life in methanol and ethanol.
 - New integral spur-gear pumping mechanism.
 - 90-PSI continuous operating pressure and up to 150-PSI peak pressure, base plus boost.
 - Integral, external brushless controller for clean installation, cooler fuel and enhanced reliability.
 - ORB-10 outlet port.
 - Requires straight 12-VDC to 16-VDC power supply.
 - Not compatible with pulse modulated systems or fuel pump speed controllers.
- ARO18046**

TVS BRUSHLESS FUEL PUMP CONTROLLER

Aeromotive's Integral, True Variable Speed (TVS) Brushless Motor Controller features built-in pump speed control via a dedicated 0-5-volt DC analog input. The TVS Controller capitalizes on our brushless motor technology by reducing fuel flow and dropping already low current draw during low engine demand, minimizing the introduction of both motor and environmental heat.

- TVS (True Variable Speed) Retrofit Controller for all 3.5-gpm and 5.0-gpm Aeromotive Brushless Gear Pumps.
 - Integral, True Variable Speed motor controller reduces pump speed during low-load, light throttle operation, keeping fuel cooler while enhancing reliability.
 - TVS controllers are not compatible with OEM pulse modulated fuel pump drivers (FPDM) or legacy Aeromotive fuel pump speed controllers (FPSC). An analog 0-5 VDC signal, such as that from a TPS or MAP sensor required for True Variable Speed operation.
 - Upgrade standard Brushless A1000's & Eliminators built after January 2020. Be sure to check the build date on the bottom of the pump sleeve. The first four digits are month and year, for example 0120 would be January 2020.
- ARO18047**

AEROMOTIVE CARBURETED PHANTOM 200 KIT

These new Phantom Carbureted Fuel Systems include all main fuel system components required to create a proper carbureted fuel system, including the desired Phantom Baffled Fuel Pump Kit with a 200 LPH fuel pump. This product is not legal for sale or use on emission-controlled vehicles except when used as a direct replacement part matching OEM specification. Each system ships with the proper carbureted bypass fuel pressure regulator, high flow billet fuel filter, filter mounting bracket, plus all the required port fittings and O-rings, the deluxe wiring kit (not shown) and Aeromotive fuel pressure gauge.

Ideal for naturally aspirated and blown, carbureted engines producing from 300- 900 plus flywheel Horse Power, on the street or at the track. AN-08 Style fuel hose and hose-ends are required for the installation of a fuel supply and return line sold separately and not included.

Carbureted Phantom 200 Kit ARO17255

CARBURETTED PHANTOM 325 IN-TANK PUMP

Aeromotive's all-new returnless Carburetted Phantom is a cost-effective way to install a fuel system for any carburetted system, in virtually any fuel tank. For those customers who want the ease of a returnless carburetted system in their car and are tired of loud, noisy T-style pumps, Aeromotive's new Carburetted Phantom is the way to go. Line pressure is pre-set to 15 psi. Equipped with the Aeromotive Stealth 325 pump, the Phantom Carburetted System is capable of supporting up to 900 horsepower naturally aspirated, 750 horsepower forced induction, on gasoline.

- Billet Top Hat with ORB-06 ports
- Foam Baffle & Bladder Sump
- Proprietary Sealing Gasket
- Installation Ring
- High-Flow Pre-Pump Filter
- Billet C-Ring Mount
- Height Adjustable 6-11"

ARO18201 Billet Top with -6AN Ports

Aeromotive Carburetted Phantom 340 Kit

These new Phantom Carburetted Fuel Systems include all main fuel system components required to create a proper carburetted fuel system, including the desired Phantom Baffled Fuel Pump Kit with a 340 LPH fuel pump. Each system ships with the proper carburetted bypass fuel pressure regulator, high flow billet fuel filter, filter mounting bracket, plus all the required port fittings and o-rings, the deluxe wiring kit (not shown) and Aeromotive fuel pressure gauge. Ideal for naturally aspirated and blown, carburetted engines producing up to 900 plus flywheel Horse Power, on the street or at the track. AN-08 Style fuel hose and hose-ends are required for the installation of a fuel supply and return line, sold separately and not included.

Carburetted Phantom 340 Kit ARO17254

TRIFEKTA PHANTOM

IN-TANK FUEL PUMP KIT

Aeromotive's new Phantom Trifekta is designed to extend the patented Phantom technology into the realm of ultra-high horsepower street/strip applications. Equipped with triple 450lph, E85 friendly Walbro pumps, the new Aeromotive Trifekta supports staged pump control to reduce recycling and improve continuous duty capability. The Trifekta is ready to feed blown EFI applications making a whopping 1,650 FWHP on E85 and as much as 2,400 FWHP on gas.

- Triple 450lph Walbro Fuel Pumps
 - Patented Phantom Bladder technology
 - Includes everything required to mount in-tank
 - ORB-08 Outlet, Vent & Return Ports
 - 6in Billet Top Cap: Requires Drilling 4.5in hole
 - Three Sets of Electrical Terminals: Main Pump, Auxiliary Pumps and Fuel Level Sending Unit
- ARO18311**

Phantom Stealth Dual In Tank Pump Kit

The Dual Phantom comes loaded with two 340lph pumps, an additional set of electrical bulkheads, and a larger capacity foam and bladder. Remarkably, it does not take up any additional space. The dual pumps provide opportunity for supporting big power (see power ratings below) while remaining OE quiet. Separate electrical bulkheads allow for an "on demand" fuel system, which reduces the amount of returned fuel and reduces the tank temperature, making vapor lock and cavitation a thing of the past. Also, this feature is a must when a redundant (back up) pump is needed in extreme conditions, such as off-road, desert, and endurance racing. The larger capacity foam and bladder combat fuel slosh while retaining enough fuel to feed the dual pumps. And the best feature is all of this done from your stock tank with no welding or fabrication!

- EFI or Carbureted
- (2) 340 LPH Stealth Fuel Pumps
- Supports up to 1400 HP EFI – Forced Induction
- Supports up to 1700 HP EFI – Naturally Aspirated
- Supports up to 1700 HP Carburetted – Forced Induction
- Supports up to 2000 HP Carburetted – Naturally Aspirated
- Black anodized top hat
- (2) Universal high flow pre-pump filters
- (4) ORB-06 Ports – 2x Supply, (1) Return, (1) Vent
- Larger Capacity fuel resistant baffle / basket (Includes: Foam and Bladder)
- Modular design can be cut to height to fit almost any fuel tank
- Turbine pump mechanisms increase durability
- In-tank use only

ARO18309 Phantom Stealth Dual Pump Kit -6AN
ARO12609 Replacement Strainer Filter & Gasket

STEALTH HOLDEN COMMODORE VE-VF A1000 INTANK FUEL PUMP

This is a complete drop-in single fuel pump assembly for late model VE-VF Holden Commodore. The system provides a single A1000 or Eliminator Fuel Pump capable of supporting big HP. The best part, it drops right into your factory tank. It still incorporates the factory jet siphon system, includes an integral 100-micron pre-pump filter and an ORB-08 return line port. Now with a true return-style system in your Commodore, you can support the power your making without the worry of the siphon system and while maintaining your factory fuel tank. All while saving you money!

- up to 1300 HP – aspirated
- ORB-08 outlet and return port
- up to 1000 HP – forced air induction
- A1000 Fuel Pump
- EFI applications use regulator P/N 13101 or P/N 13109.
- Billet Speed Pump Controller (P/N 16306) recommended for EFI street applications.
- Compatible with E85 & Methanol
- Incorporates factory jet siphon system and sending unit
- Includes an integrated 100-Micron S/S pre-pump filter
- Utilizes the factory tank, o-ring, lock ring and mounting location
- Includes everything necessary to install the pump into your tank.
- Requires the use of a bypass style regulator and return line.

Description Part No.
Stealth VE-VF A1000 Fuel Pump ARO18642

STEALTH HOLDEN COMMODORE VE-VF ELIMINATOR INTANK FUEL PUMP

This is a complete drop-in single fuel pump assembly for late model VE-VF Holden Commodore. The system provides a single Eliminator Fuel Pump capable of supporting big HP. The best part, it drops right into your factory tank. It still incorporates the factory jet siphon system, includes an integral 100-micron pre-pump filter and an ORB-08 return line port. Now with a true return-style system in your Commodore, you can support the power your making without the worry of the siphon system and while maintaining your factory fuel tank. All while saving you money! This continuous duty "street warrior" supports big horsepower and maintains the drivability necessary for a true high performance street car. Designed for high horsepower street/strip applications, EFI or Carbureted, it features our "dual chamber" pumping mechanism.

- up to 1900 HP – aspirated
- Compatible with E85 & Methanol
- up to 1400 HP – forced air induction
- Eliminator Fuel Pump
- EFI applications use regulator P/N 13110
- Billet Speed Pump Controller (P/N 16306) recommended for EFI street applications.
- ORB-08 outlet and return port
- 25% more flow at pressure than our A1000 Fuel Pump
- Incorporates factory jet siphon system and sending unit
- Includes an integrated 100-Micron Stainless Steel pre-pump filter
- Utilizes the factory tank, o-ring, lock ring and mounting location
- Includes everything necessary to install the pump into your tank.
- Requires the use of a bypass style regulator and return line.

Description Part No.
Stealth VE-VF Eliminator Fuel Pump ARO18643

Phantom EFI Returnless Fuel Pump

Aeromotive's all-new returnless EFI Phantom is a cost-effective way to fuel a late model EFI engine swapped into an early, carbureted muscle car or truck. For those who want an in-tank, baffled fuel pump, but they don't want to run an external regulator with a return line, the new Phantom EFI-Returnless In-Tank Pump is just the ticket. Featuring the same simple, fabrication free installation of the return style Phantom kits, but you just run one AN-06 supply line through an Aeromotive high flow filter to the engine, connect a proper power supply to the pump and bang, you're done! Supports up to 600 FWHP naturally aspirated and up to 450 FWHP forced induction EFI on gasoline. Reduce FWHP limit by 30% for E85.

- Billet Top Hat with ORB-06 ports • Foam Baffle & Bladder Sump
- Proprietary Sealing Gasket • Installation Ring • High-Flow Pre-Pump Filter • Billet C-Ring Mount • Height Adjustable 6-11"
- ORB-06 port plug

Phantom EFI Returnless Fuel Pump ARO18329

PHANTOM APEX 340 & APEX 450 FUEL PUMP KIT

The best fuel surge and slosh control for off-road and road racing. Ideal for late-model Pulse Modulated fuel systems with no return.

- 340lph version supports – 595hp EFI / Forced Induction and 725hp EFI / Naturally Aspirated
- 450lph version supports – 700hp EFI / Forced Induction and 975hp EFI / Naturally Aspirated
- Low Profile, black anodized, CNC machined top-hat and stainless-steel fuel pump hanger assembly
- ORB-06 Ports complete with supply, return and vent
- Fuel resistant baffle / basket (Includes: Foam and Bladder)
- Integral high flow pre-pump filter
- Flexible design can be cut to height to fit almost any fuel tank
- Turbine pump mechanism offers quiet pump operation, high flow capacity and increased durability.
- Can be used return style with bypass regulator with or without vacuum/boost reference.
- Fully compatible with return-less fuel systems using pulse modulated FPDM for pressure control.
- Phantom Bladder Baffles Check Valves recommended for return-less, pulse modulated systems.

ARO18704 Phantom 340 Apex Pump Kit
ARO18705 Phantom 450 Apex Pump Kit

Vibration Dampener Mounting Kit

The fuel pump vibration dampener mounting kit uses special rubber mounts to dampen vibrations and prevent them from being transferred to the chassis for quieter fuel pump operation.

Fuel Pump Vibration Dampener Mounting Kit ARO11601

AEROMOTIVE PHANTOM BLADDER BAFFLES

Complementing the new Apex Phantom, Aeromotive also releases its proprietary new Phantom Bladder Baffle, which literally opens and closes the door on Phantom flow control technology.

While providing a continuous, high fuel flow into the Phantom Baffle using the Apex Phantom is awesome, it's critical to allow a large volume of fuel to flow into the baffle naturally from the surrounding tank. It is also important to keep it there. The Phantom Bladder Baffle can ensure this. Installed in the inlet passages at the base of the Phantom Bladder, the new Phantom Bladder Baffle increases the flow area into the Bladder to promote rapid fuel recovery from the surrounding tank while deploying a PTFE check ball that acts to keep that critical fuel in the bladder, preventing it from escaping during hard acceleration, cornering, and off-angle vehicle maneuvers.

Aeromotive's Phantom Bladder Baffle is constructed with CNC-machined billet aluminum valve bodies, which are then anodized and loaded with a PTFE check ball and locked in to the Phantom bladder with a PTFE retaining washer. The Phantom Bladder Baffle is designed for durability and is fully compatible with gasoline and ethanol fuels. It requires no special tools and may be used in any existing or new Phantom bladder, with the Apex Phantom, or as a stand-alone solution to slosh control.

Aeromotive's Phantom Bladder Baffle is available in sets of 4 (P/N 18020) for the standard Phantom Bladder used in the Phantom 200 and Phantom 340 pump kits, or in sets of 5 (P/N 18021) for the larger Phantom Bladder used in the Phantom Flex and Phantom Dual. **Phantom Bladder Baffles Set of 4 ARO18020**
Phantom Bladder Baffles Set of 5 ARO18021

PHANTOM APEX JET SIPHON KIT

- The Apex Jet-Siphon Pump utilizes advanced, patent-pending jet siphon technology to provide a constant supply of cool fuel from a remote spot in the tank into the Phantom bladder or reservoir.
- State of the art Jet-Siphon technology is self-priming and ideal in extreme applications from all-out road-racing to radical rock crawling.
- Transfers fuel across "saddle-bag" style tanks keeping the main tank and reservoir full.
- Ideal for applications experiencing extreme cornering loads or radical, off-angle / off road vehicle environments.
- The Apex Jet-Siphon Pump keeps fuel at the pump inlet even when fuel tank levels are low and fuel is moving away from the pump location.
- Perfect addition to any existing Phantom.
- For the ultimate slosh control and low fuel tank performance use with Phantom Bladder Baffles

ARO18706

Billet Fuel Pump Speed Controller

For any pump, on any type of vehicle, the Aeromotive Fuel Pump Speed Controller

(FPSC) minimizes hot fuel handling problems for in-line pumps in bypass systems and it will also keep T-style pumps cool in static systems, extending fuel pump life. Sensing engine RPM, the FPSC kicks your fuel flow into high gear when you need it, but reduces pump speed and flow to keep things cool when you don't. It's like an automatic transmission for your electric fuel pump.

When you're cruising, Aeromotive's Billet Fuel Pump Controller automatically steps voltage down to the Fuel Pump at lower RPM, then it continuously monitors engine speed, stepping voltage and flow back up when needed. The RPM step-point is adjustable, allowing calibration for your specific application.

Controller features:

- LED indicator confirms correct ignition signal hookup, verifies energization of the manual override circuit, and indicates when the circuit is providing full voltage to the pump.
- A solid-state transistor circuit, rated up to 40 amps, replaces the relays recommended in most fuel pump electrical circuits.
- Cool operation – mount it virtually anywhere.
- Housing crafted from billet 6061-T651 aircraft aluminum alloy, protected with a beautiful bright dip red anodized finish.
- Complete installation kit — wire, override toggle switch, installation hardware, and instructions included.

Billet Fuel Pump Speed Controller. ARO16306

Phantom 200 Stealth Fuel System

No more welding sumps or using up trunk space with fuel cells. No more hot fuel handling issues like vapor-lock and no more fuel slosh. The Phantom system's internal baffle / basket controls fuel slosh and keeps the fuel pump submerged in fuel, even at low fuel levels and in aggressive driving. The best part about this whole system... it's completely universal. This system will fit virtually any tank from 5.5" deep to 11" deep, plastic, steel, aluminium, corrugated or smooth. One system that gives you everything you need to fuel your ride. Its serious performance you will never know is there!

- Supports up to 450 HP EFI - Forced Induction
- Supports up to 600 HP EFI - Naturally Aspirated
- Supports up to 600 HP Carbureted - Forced Induction
- Supports up to 750 HP Carbureted - Naturally Aspirated
- Black anodized hanger assembly
- (3) ORB-06 Ports – Supply, Return, Vent
- Fuel resistant baffle / basket (Includes: Foam and Bladder)
- Universal high flow pre-pump filter
- Modular design can be cut to height to fit almost any fuel tank
- EFI or Carbureted
- Turbine pump mechanism increases durability.
- Must be used with a return style system
- In-tank use only

ARO18689 Phantom 200 Stealth Fuel System -6AN Replacement Strainer Filter Suit
ARO18688, ARO18689 & ARO18201

Phantom Flex In Tak Fuel Pump Kit

Aeromotive's Phantom line of universal in-tank fuel systems goes green with the new Phantom Flex. As E85 makes its way into mainstream hot-rodding, its higher octane rating creates a cheaper fuel alternative for higher compression performance applications, but came with a few problems, namely its corrosive nature and stoichiometric ratio (fuel needed per unit of air). This is no match for the sealed electrical connections and 450lph pump included with Phantom Flex, making Aeromotive's latest addition true to its name.

The Phantom Flex has a lot in common with the original Phantom. Whether you're using E85 or gasoline, the Flex provides easy installation in virtually any fuel tank. It comes with an additional 30% more flow over its 340lph predecessor. The system also includes a larger foam and bladder design to feed the 450lph pump and combat fuel slosh in many harsh driving conditions. Reliable and quiet, the new Phantom Flex provides you with a viable solution when using renewable energy.

- 450 LPH Stealth Fuel Pump
- E85 Compatible
- Supports up to (on Gas) 800HP EFI - Forced Induction
- Supports up to (on Gas) 1,100HP EFI - Naturally Aspirated
- Supports up to (on Gas) 950HP Carbureted - Forced Induction
- Supports up to (on Gas) 1300HP Carbureted - Naturally Aspirated
- Supports up to (on E85) 550HP EFI - Forced Induction
- Supports up to (on E85) 750HP EFI - Naturally Aspirated
- Supports up to (on E85) 700HP Carbureted - Forced Induction
- Supports up to (on E85) 900HP Carbureted - Naturally Aspirated
- Black anodized top hat
- (3) ORB-06 Ports – Supply, Return, Vent
- Larger Capacity fuel resistant baffle / basket (Includes: Foam and Bladder)
- Universal high flow pre-pump filter
- Modular design can be cut to height to fit almost any fuel tank
- EFI or Carbureted
- Turbine pump mechanism increases durability.
- In-tank use only

BILLET HEX DRIVE FUEL PUMP

Get the same unparalleled performance you get from our Billet Belt Drive Fuel Pump with the convenience of direct drive. The Hex Drive Fuel Pump can be mounted and driven directly from the back of a properly prepared external oil pump or driven directly by the cam through a timing cover adapter.

- Proven performance, powering some of the world's fastest EFI vehicles. • Supports up to 3600 HP gas, 1800 HP methanol.
- Compact size facilitates easy mounting. • Billet aluminium CNC-machined body, not "cast". • -10AN O-Ring inlet and outlet ports.
- For EFI applications use regulator ARO13113.
- Carburetted gasoline applications require regulator ARO3202 or ARO13212. • Alcohol applications require Double Adjustable Regulator ARO13209 or ARO13214. • Utilizes standard, 3/8" hex drive shaft and 3-bolt mounting pattern.

Hex Drive Fuel Pump with Mounting Collar **ARO11107**

BILLET BELT DRIVE FUEL PUMP

Zero amperage draw, less weight, and more flow! The Aeromotive Billet Belt Drive Fuel Pump was designed to solve fuel delivery problems in high horsepower, forced-induction EFI applications, and is now very popular in carburetted applications as well.

- Proven performance, powering some of the world's fastest EFI vehicles. • Supports up to 3600 HP gas, 1800 HP methanol.
- Compact size facilitates easy mounting.
- Billet aluminium CNC-machined body, not "cast".
- -10AN O-Ring inlet and outlet ports.
- For EFI applications use regulator ARO13113.
- Carburetted gasoline applications require regulator ARO3202 or ARO13212.
- Alcohol applications require Double Adjustable Regulator ARO13209 or ARO13214.

ATOMIC BELT DRIVE FUEL PUMP

These Aeromotive B style belt drive Atomic fuel pumps are designed to be operated by a pulley and a cog belt, allowing the pumps to be driven from your crankshaft. They can be used in low or high-pressure applications and flow in excess of 4,500 lbs. per hour and over 12 gpm at 100 psi. The Aeromotive B style belt drive Atomic fuel pumps will support from 1,500 to over 5,000 hp on gas and over 2,500 hp on ethanol and methanol fuels. Their special Type III hardcoat anodized finish protects the 6061-T6 aircraft billet aluminium alloy housing from harsh fuels while looking great. The body features removable ports with a 1.25 in. inlet hose barb and a female -12 AN O-ring boss outlet port. This new modular inlet/outlet port design opens the door for you to interchange attachment styles to fit your engine's needs. If you're building a high-horsepower engine, use one of these Aeromotive B style belt drive Atomic fuel pumps as the foundation of your fuel system

Return (Bypass) Style Regulator

- CNC-machined billet aluminium construction
 - Special quick action diaphragm design
 - Return-style design extends pump life and eliminates pressure drop at launch
- 3-Port Street and Competition Fuel Pressure Regulator Gasoline** **MSD29387**

Diaphragm Kit **MSD29859**

Specifications: Inlet & Return Size: 3/8" NPT, Maximum Inlet Pressure: Unlimited, Outlet Size: 3/8" NPT, Adjustment Range: 3-12 PSI, Gauge Port: Size: 1/8" NPT
 Recommend Maximum Flow: 200 GPH

Aeroflow IN-TANK FUEL REGULATOR

The Aeroflow Performance In-tank fuel pressure EFI regulator is designed for use with a modern returnless fuel system. This returnless system have the fuel pressure regulator inside the fuel tank. This eliminates the need for a fuel return line from the fuel injector rail on the engine to reroute excess fuel back to the fuel tank. This In-tank fuel pressure regulator is present to a pressure of 58PSI (4BAR) and the remaining will be dumped directly back into the tank. It features a -6AN bulkhead on one side and a 3/8" (9.5mm) barb on the other side.

AF66-2054

Carburetor Regulators

Billet 2 port carb regulators. Made from billet 6061 T6 aluminium these regulators are an ideal replacement/upgrade for the traditional Holley style 2 port regulator. Comes in 2 different port styles, 3/8" NPT or -8 ORB and in 2 adjustment ranges, 1 - 4 PSI or 4.5 - 9 PSI. Available in 4 different finishes. Comes with chrome mounting bracket and mounting screws.

Part No	Description	Finish

AF59-4000 replacement diaphragm with high and low pressure springs.

Bypass 4.5-9 PSI Regulator

Aeroflow's Bypass 4.5-9 PSI regulator is available with either 3/8" NPT or -8ORB female threads and are the perfect choice for fuel systems running a return line to the tank with added benefit of less load on the fuel pump resulting in quieter fuel pump operation, cooler fuel and improved fuel pump life. Available in blue, black and red anodised or polished finishes.

AF59-2049	Replacement for 2 port diaphragm AF66-2047		

Note: All pressure adjustments should be made with motor running at 1800-2000RPM

• NOTE: Fittings not included

Comes standard with carburettor Spring installed.

Return

CARB & EFI FUEL PRESSURE REGULATOR (Return style)

These fuel regulators allow carburettor fuel systems to be converted to EFI high pressure fuel systems while still utilising the same regulator by easily changing the internal spring. With a carburettor pressure spring installed out of the box which allows adjustability of 3 - 20 psi (0.26 - 1.37 BAR), simply unscrew the top half of the fuel regulator and install the efi spring which will now allow adjustability of 20-60 psi (1.37 - 4.13 BAR). Being a compact design with height of only 115mm (4-33/64"), diameter of 53mm (2-5/64") and can be installed anywhere with the supplied billet mounting bracket. Featuring 3 x -8 orb ports and a 1/8" npt port up front it is also available in both chrome and black anodized finishes.

BILLET 4 PORT EFI REGULATORS.

The Aeroflow Performance 4 port 1500KW (2000HP) EFI fuel regulator is designed to provide a stable platform for the high demands of all current fuel systems. With fuels such as E85, Methanol and alcohol based fuels this fuel regulator is an ideal upgrade to maintain a steady flow rate with 4 x -8ORB inlet ports and 1 x 1/8" NPT for a gauge or pressure sensor to keep a watchful eye on fuel pressures. All whilst being completely rebuildable and user-serviceable.

- Adjustment from 35 psi to 85 psi (2 to 6 BAR)
- 4x -8ORB inlets
- 1x -8ORB return
- 1:1 Boost Reference

AEROFLOW HIGH PERFORMANCE CARB REG

Aeroflow Bypass fuel pressure regulator is specially designed for high performance carburettor fuel pumps such as the Aeroflow Black 14PSI fuel pump. This fuel regulator is designed to operate in between 2 to 20 PSI. This is the perfect choice for fuel systems running a return line to the tank with added benefit of less load on the fuel pump resulting in quieter fuel pump operation, cooler fuel and improved fuel pump life. The regulator is features -8ORB female threads on both inlet and outlet ports, one 1/8" NPT port for a gauge and made from billet 6061-T6 aluminium. Available in either black or silver finishes.

STANDARD 2-PORT REGULATOR

- 3/8" NPT ports
- .220" (7/32") restriction
- Includes mounting bracket

Holley Red Regulator (1-4 PSI) HO12-804

Holley Blue Regulator (4-1/2-9 PSI) HO12-803

Diaphragm Repair Kit HO12-807

CARBURETOR BYPASS STYLE FUEL PRESSURE REGULATOR

- 3/8" NPT ports (1 in, 1 out, 1 bypass or return)
- Used in systems with a return line back to the fuel tank • Quieter fuel pump operation
- Adjustable from 4-1/2 to 9 PSI

Holley Bypass Regulator HO12-803BP

Carbureted HP Billet Fuel Pressure Regulator

- 6061-T6 billet aluminium
- 3/8" NPT Inlet & Outlet Ports
- 1/8" NPT gauge port
- Used in systems where a return line is not needed
- Use with electric or mechanical pumps
- Adjustable from 4.5-9 PSI for precise fuel pressure adjustments
- One inlet, two outlets
- Comparable and interchangeable with popular Holley® 12-803 regulator
- Mounting bracket included

Description
HP Billet 2-Port Regulator - Carburetted

Carbureted HP Billet Fuel Pressure Regulator With Bypass

- 6061-T6 billet aluminium
- 3/8" NPT Inlet & Outlet ports
- 1/8" NPT gauge port
- Used in systems with a return line back to the fuel tank
- For use with mechanical or belt drive fuel pumps
- Adjustable from 4.5-9PSI
- One inlet, One outlet, One return or bypass
- Utilizes a idle bleed for precise control of idle pressure
- Black anodized body and clear anodized top for corrosion resistance and good looks
- Mounting bracket included

Description
HP Billet 2-Port Regulator With Bypass - Carburetted

BILLET BY-PASS REGULATOR

- Adjustable from 4-65 psi for precise fuel pressure adjustments
- Constructed of billet aluminium with a black anodized base and a clear anodized top for good looks
- Used in systems with a return line back to the tank
- 3/8" NPT Inlet; (1) 3/8" NPT Outlet; and (1) 3/8" NPT Return Port
- Includes fitting for manifold reference
- Includes an 1/8" NPT gauge port
- Boost Reference - 1:1

Description
Adjustable By-Pass Return Style Regulator

3/8" NPT, Boost Reference - 1:1

Carbureted HP Billet Fuel Pressure Regulator With Bypass & O-Ring Port

- 6061-T6 billet aluminium
- -8 AN O-ring inlet, (1) -8 AN O-ring outlet, (1) -6 AN O-ring return
- 1/8" NPT gauge port
- Used in systems with a return line back to tank
- Designed for use with the Holley® HP™ in-line fuel pumps or other high pressure pumps where return line is needed
- Adjustable from 4.5-9 PSI for precise fuel pressure adjustments
- Mounting bracket included

Description
HP Billet 2-Port Regulator With Bypass - Carburetted

Carbureted Dominator Billet Fuel Pressure Regulator With Bypass & O-Ring Port

- 6061-T6 billet aluminium
- -10 AN O-ring inlet, (1) -10 AN O-ring outlet, (1) -8 AN O-ring return
- 1/8" NPT gauge port
- Used in systems with a return line back to tank
- Designed for use with the Holley® Dominator™ in-line fuel pumps or other high pressure pumps where return line is needed
- Adjustable from 4.5-9 PSI for precise fuel pressure adjustments
- Mounting bracket included

Description
Dominator Billet 2-Port Regulator With Bypass - Carburetted

EFI Dominator Billet Fuel Pressure Regulator With Bypass & O-Ring Port

- 6061-T6 billet aluminium
- -10 AN O-ring inlet, (1) -10 AN O-ring outlet, (1) -8 AN O-ring return
- 1/8" NPT gauge port
- Used in systems with a return line back to tank
- Designed for use with the Holley® Dominator™ in-line fuel pumps or other high pressure pumps where return line is needed
- Includes fitting for manifold reference
- Adjustable from 40-70 PSI for precise fuel pressure adjustments
- Mounting bracket included

Description
Dominator Billet 2-Port Regulator With Bypass - EFI

Carburettor Fuel Pressure Regulator

These new Fuel Pressure Regulators are machined from aircraft quality aluminum for those who demand the best. Manufactured by Essex Industries, these regulators have fluorosilicone diaphragm material for extended life and high temperature protection. They are compatible with all grades of gasoline/methanol and have 1/8" NPT gauge ports. Mounting bracket, fittings and hardware are included. ED1727 has 3/8" NPT inlet/outlets and is adjustable from 5 to 10 psi providing extremely consistent pressure regulation for carbureted applications.

Fuel Pressure Regulator for Carburettor ED1727

EFI Fuel Pressure Regulators

Manufactured by Essex Industries, these regulators have a diaphragm made of fluorosilicone for extended life and high temperature protection. They are compatible with all grades of gasoline/methanol and have 1/8" NPT gauge ports. Mounting bracket, fittings and hardware are included. ED1728 is adjustable from 35 to 90 psi and has two -6 AN inlet ports plus a single -6 AN outlet. ED1729 offers the same flow performance but with a longer body and -10 AN inlet ports. Both are capable of handling the flow from one ED1794 pump or two ED1790 pumps for systems well beyond 1000 hp.

180 GPH w/ dual -6 AN inlet, single -6 outlet and -6 external bypass ED1728

BOOST REFERENCED EFI REGULATOR

Designed to work on all naturally aspirated EFI, turbo and supercharged applications like vehicles that run in the Pro Street, Pro Import and Outlaw classes. This is a 2 port 1:1 boost compensating return style regulator that is adjustable from 15-65 PSI + boost reference and is designed to be used in conjunction with any electric EFI fuel pump.

• Built in gauge port • -8AN O-ring inlet & outlet ports and a -6AN O-ring return port. • Includes mounting hardware and AN fittings.

Adjustable EFI Regulator H0512-504-5

VOLUMAX 2-PORT REGULATOR

• Regulates from 4-1/2 to 9 PSI
• One 1/2" NPT inlet and two 1/2" NPT outlet ports
• .437" (7/16") restriction
• Includes mounting hardware and AN style fittings
• Alcohol compatible

High Flow 2-Port Regulator H012-704

VOLUMAX 4-PORT REGULATOR

• Regulates from 4-1/2 to 9 PSI
• One -8 inlet port and four -6 outlet ports
• .437" (7/16") restriction
• Aluminium billet body and top casting cover are hard coat anodized
• Three fuel pressure gauge mounting options
• Compatible for use with methanol/alcohol
• Includes mounting hardware and AN style fittings

High Flow 4-Port Regulator H012-707

FUEL PRESSURE SAFETY SWITCH

• Safety Pressure Switch That Reads Engine Oil Pressure
• Will Shut Off Fuel Pump When Oil Pressure Drops Below 5 PSI
• Recommended for all electric fuel pumps

Fuel Pump Safety Pressure Switch H012-810

MagnaFuel

MAGNAFUEL CARBURETTOR REGULATORS

MagnaFuel regulators provide the most stable platform for fuel delivery in the performance industry. These exclusive pressure control units reduce the amount of pressure drop that normally occurs at high flow demand and during times of sudden change in fuel demand such as initial launch, gear change, and nitrous oxide actuation.

• Two or Four-Port Configuration
• 1/8" NPT Gauge Ports on all Models
• Base Pressure Adjustable from 4-12 psi
• -10 AN Inlet & -6 AN Outlet Fittings

5-PORT CARBURETTOR BYPASS REGULATOR

• Engine Hp: 2,000+ at 28psi.
• Fast response, low maintenance
• MagnaFuel's unique cartridge design provides the most stable platform for fuel delivery in the performance industry
• Durable metal to metal seat for instantaneous response and low maintenance
• Two and four-port configurations available
• 1/8" NPT gauge ports on all models
• Boost-reference models provide a 1:1 compensation ratio
• Suitable for drag racing, circle track, road racing, mud bog, power boat, tractor pulling
• Adjustable base pressure
• Machined from billet aircraft aluminium and anodized for long lasting finish
• Precise pressure control

MagnaFuel EFI Fuel Pressure Control Units

MagnaFuel's EFI fuel pressure control units feature a unique guided-metering valve assembly to provide a more accurate metering of fuel flow and help reduce the pressure drop that can occur at high or sudden changes in fuel demand. The pressure control units are designed to work with the EFI 600 pump and are available in two sizes--large for applications of up to 2,000+ hp and standard for applications of up to 700 hp. Each of these units has a 1/8 in. NPT pressure port for a gauge, a filtered vent fitting or optional boost reference fitting, and is compatible with racing gasoline and alcohol. The units feature a CNC-machined, aircraft-quality aluminum body and are hand-assembled and flow-tested for maximum performance.

ULTRA LOW-PRESSURE

CARBURETTED REGULATOR

Our Ultra Low-Pressure Regulator features a completely unique valve, designed to support high flow at a very low pressure. Intended for multiple smaller carburetors, down-draft and side-draft style, such as the classic Stromberg, Weber, Mikuni, Dellorto, and the Solex. This product is not legal for sale or use on emission-controlled vehicles except when used as a direct replacement part matching OEM specification. • Adjustable from 2-5 PSI • Ideal for small carburetors • ORB-06 inlet port and (2) ORB-06 outlet ports
• 1/8" NPT gauge port • Clear anodized finish for a subtle look
ARO13222

Carburetted Adjustable Regulator

3/8 NPT ports
3/8 NPT inlet and outlet ports 1/8" NPT gauge port. Regulator re-seats after the needle shuts down, preventing pressure creep. Comes complete with a mounting bracket. Fittings Sold Separately
Carburetted Adjustable Regulator, **ARO13205**

Carburetted Adjustable Regulator

Adjustable from 5-12 PSI. Ideal for carburettor and dedicated nitrous applications where higher flow, quicker response and less pressure creep are desired. The Carburetted Adjustable Regulator is designed specifically for carburetted street or racing engines. Ideal for our SS Fuel Pump and our A2000 Fuel Pump. -6 AN female inlet and outlet ports 1/8" NPT gauge port. Regulator re-seats after the needle shuts down, preventing pressure creep. Comes complete with a mounting bracket. Fittings Sold Separately
Carburetted Adjustable Regulator, **ARO13201**

Stackable

Carburetted Regulator

Ideal for carburetted nitrous engines, these Aeromotive regulators can be stacked together to control multiple pressures with a single fuel pump. Capable of feeding single or dual carburetors, they give you total control of unique fuel pressures at every distribution point. These Aeromotive stackable regulators are a clean, lightweight solution, perfect for nitrous engine combinations where unique pressures are desired. The Aeromotive stackable regulators create their own integrated fuel log by utilizing a patent-pending, flow-through designed modular regulator body. Using a positive O-ring seal and the provided cap screws and O-rings, simply bolt as many of these regulators together as needed. Aeromotive manufactures these regulators from billet CNC-machined aluminium and they are adjustable from 5-12 psi.
ARO13217 STACKABLE CARB REG MODULAR 2X-6 OUT 2X-10 IN 5-12PSI

A1000 4 Port Carburetted Bypass Regulator

Convert from fuel injection to carburetion, and use your EFI fuel pump. Designed for the Aeromotive A1000 fuel pump, this regulator will also work with any similar EFI pump, delivering seamless volume at perfect pressure, right to your carburetor. Base Fuel pressure (with vacuum/boost disconnected) adjustable from 3-15 PSI. Note: EFI conversions will require a larger return line than stock/existing EFI for proper, low pressure control. Perfect for any application from the street to the track, naturally aspirated or supercharged. One -10 AN inlet and one -8 AN return port with two -6 AN outlet ports and 1/8" NPT gauge port. Stainless steel vacuum boost port - ideal for turbo-charged or supercharged engines. Fuel pressure rises on a 1:1 ratio with boost. Bypass design provides the ultimate, dynamic fuel delivery system. Requires return line from bottom of regulator to top of tank. Fittings Sold Separately
A1000 Carburetted Bypass Regulator **ARO13204**

A2000 2-PORT BYPASS REGULATOR

Aeromotive A2000 carburetted bypass regulators are ideal for use with high-volume electric or mechanical fuel pumps of any make, where dynamic flow and rock-steady pressure control are desired. With their unmatched boost reference and high-flow capacity, they're perfect for blow-through carburettor applications with a turbo or centrifugal supercharger.
ARO13212 2 PORT BY-PASS REGULATOR

DOUBLE-ADJUSTABLE BYPASS 2-PORT REGULATOR

These aeromotive double adjustable carburetted regulators are designed for use with Aeromotive's series of mechanical drive fuel pumps. These regulators allow a dual pressure strategy often required for alcohol carburetted racing engines where fuel pressure must be lower at idle, but higher as rpm and loads increase. Aeromotive double adjustable carburetted regulators prevent flooding during low fuel demands, while eliminating starvation at high fuel demands. They are capable of supporting 2,000+ Hp, alcohol-burning engines. These regulators do not require jets, pills, logs, or barrel valves.
ARO13214 DOUBLE ADJUSTABLE CARB FUEL REG 2-PORT ORB -10 IN/ RETURN

A1000 6 Port Carburetted Bypass Regulator

The A1000 Bypass Regulators were designed for use with our A1000 and Eliminator Fuel Pumps or similar style EFI pumps in a carburetted application. These regulators are perfect for naturally aspirated or 'blow-through' supercharged engines.
• Base fuel pressure adjustable from 3-15 PSI.
• ORB-10 inlet port and (1) ORB-08 return port.
• P/N 13224 provides (4) ORB-06 outlet ports and 1/8" NPT gauge port.
• Fuel pressure rises on a 1:1 ratio when referencing boost.
• Bypass design provides the ultimate, dynamic fuel delivery system. • Ideal for converting from fuel injection to carburetion using the stock, in-tank pump. • EFI conversions will require a larger-than-stock return line for proper low pressure control
A1000 4-Port Carburetted Bypass Regulator ARO13204

X1 2-Port Efi &

Carburettor Regulator

From carburetted to EFI pressures, naturally aspirated or forced induction, the X1 is designed to span the entire range of applications providing dependable fuel pressure regulation. Making the change from a carburetor to EFI or EFI to carburetor? There is no longer a need to purchase a new regulator. Simply utilize one of three conversion kits (sold separately) to match the operating range required of your engine. Replace original X1 Series regulator internals with the conversion kit of your choice (Part #'s 13013, 13014, and 13015) and you have a regulator with vastly different characteristics.

While versatility is one of the X1's greatest assets, it is far from the only new design feature. Utilizing larger (3) -8AN inlet/outlet/return ports to accommodate increased flow, Aeromotive incredibly reduced overall weight by 33% (compared to Aeromotive 13109 regulator). Even with these new design components, none of the traditional features expected of a genuine Aeromotive product have been neglected. Still integrated is the 1/8" NPT gauge port and 1:1 ratio boost reference port for easy forced induction connection. The X1 Series provides flexible performance that grows as your fuel system grows.

- ARO13303** EFI -8AN Inlet/Outlet Port

A2000 Carburetted Bypass

Adjustable base pressure from 2 to 20 PSI-recommended for A-2000; P/N 11202 and Belt Drive; P/N 11105 Drag Race fuel pumps. Ideal for use with high volume electric or mechanical fuel pumps of any make, where dynamic flow and rock steady pressure control is desired. Rock steady pressure control. Bypass design provides the ultimate, dynamic fuel delivery system. Requires return line from the bottom of regulator to top of tank.

-10 AN inlet and return ports. Four -8 AN outlet ports. Fuel Pressure will rise on a 1:1 ratio when referencing boost. Perfect for blow-through carburettor applications with a turbo or centrifugal supercharger. Boost reference and high flow capability are unmatched. Note: High pressure, boost reference applications require high volume, high pressure fuel pumps. High volume, EFI type electric or mechanical pumps, with no internal bypass valve like the Aeromotive Pro-Series; P/N 11102, Eliminator; P/N 11104, or the new belt driven fuel pump; P/N 11105.

A2000 Carburetted Bypass Regulator ARO13202

PRO-STOCK 2-PORT REGULATOR

Aeromotive's Pro Stock 2-port regulators are race-tested by record-setting professional racers. They were designed to be used with the Aeromotive A2000 fuel pump and other drag race style pumps in single-carburettor applications. Utilizing an extremely lightweight titanium valve and an innovative opposed-spring design, these Aeromotive Pro Stock regulators are engineered to be the quickest responding, most reliable high-flow regulators on the market. Their Type II bright dip anodized body and cap are CNC-machined from 6061 T6 aircraft-grade aluminum and feature a -12 AN inlet, two -8 AN outlets, and a 1/8 in. NPT gauge port.

ARO13210 PRO STOCK REGULATOR
2 PORT -12 INLET, 2 x -8 OUT

Pro-Stock 4-Port Regulator

NEW! Aeromotive introduces the ultimate static pressure regulator. Developed with and for Pro-Stock racers in NHRA and IHRA competition, and designed for use with the Aeromotive A2000 fuel pump. This regulator combines the finest, CNC-machined materials in titanium, stainless steel and billet aluminum with a "state-of-the-art" regulating mechanism to deliver a regulator that can handle any fuel while performing quicker and more efficiently than anything else on the market. CNC-machined 6061 T6 aircraft aluminum alloy body and cap, Type II Bright Dip Anodized for durability and good looks. CNC-machined Titanium poppet and stainless steel seat, plus a stainless steel spring provide quick response and durability. -12 AN ORB inlet ports and (4) -6 AN ORB outlet ports, may be used with dual or single carb applications (fittings sold separately). 1/8" NPT Gauge Port with hex key plug, regulator mounting bracket and installation instructions included.

ARO13208 Pro-Stock 4-Port Regulator

Universal Bypass Regulator

Dual purpose, universal regulator for street or track applications. Base pressure adjustable from 3 to 20 PSI with standard spring (installed) or 20 to 60 PSI with high pressure spring (included). Ideal for carburetted and EFI bypass applications where more flow and superior pressure control are desired. Capable of handling any fuel pump up to 250 GPH. Fuel pressure will rise on a 1:1 ratio when referencing boost. All ports are 3/8" NPT, with one inlet and three outlets around the main body and one return port on the bottom. Requires a return line to be installed from the bottom of the regulator to the top of the tank.

Universal Bypass Regulator

ARO13301

FUEL LOG AND REGULATOR KIT

The new Aeromotive Fuel Log incorporates features never before available. Each carburetor inlet features a ball and socket assembly that swivels +/-20 degrees, allowing additional clearance for throttle stops, nitrous plates and other accessories; then locks in place at the desired position. This product is not legal for sale or use on emission-controlled vehicles except when used as a direct replacement part matching OEM specification. The telescoping log will fit 4150 or 4500 Dominator (P/N 14201) and Demon (P/N 14202) carburetors. The ORB-10 inlet and outlet ports will feed the hungriest big blocks, and adapt easily to Aeromotive P/N 13212 (A2000 Bypass - gasoline) or P/N 13214 (Double Adjustable Bypass - alcohol) fuel pressure regulators.

- Carburetor inlets swivel + or - 20° in all directions.
- Telescoping center line 7.700" to 13.450".
- ORB-10 inlet and outlet ports.
- (2) 1/8" NPT ports for gauges or pressure transducers.
- 1.056 / .806" ID bore.

ARO17248

BYPASS CARBURETED STEALTH FUEL SYSTEM

Our Bypass Carbureted Stealth Fuel System is intended to support a return style, single carbureted application with a single AN-06 or AN-08 inlet connection. The System Kit includes all port fittings for AN-08 supply and return lines, fittings for the Stealth/Phantom pump, the X1 Carbureted bypass regulator and fittings, the AN-08 Aeromotive filter with 10-m element, and our 0-15-PSI "Equalizer" liquid filled fuel pressure gauge. This product is not legal for sale or use on emission-controlled vehicles except when used as a direct replacement part matching OEM specification.

ARO17256

EFI TO CARB

DUAL STAGE FUEL

PRESSURE REGULATOR

Aeromotive's New EFI-2-Carb Dual Stage Fuel Pressure Regulator P/N 13220 allows any car or truck, originally equipped with a return-style EFI powered engine, to affordably convert to a standard carburettor, all while retaining the full, stock, EFI fuel system components... All with a single regulator. With the New EFI-2-Carb Dual Stage regulator, no changes to the original EFI fuel system are required to bolt on a carburettor and go. Allows use of the stock EFI pump in the tank, the stock EFI supply and return lines, and the stock fuel filter. This amazing new dual stage pressure regulator provides seamless control of bypass pressure to keep the EFI fuel pump happy while enabling full control of output pressure low enough to feed any off-the-shelf carb. In the first stage, pump bypass pressure is adjustable from 8-16 psi. In the second stage, pressure to the carburettor is regulated and adjustable from 5-9 psi. Installation is painless thanks to universal, 3/8" NPT inlet, outlet and return ports. Two 1/8" NPT gauge ports allow both first stage line pressure and second stage carburetted pressure to be adjusted and monitored. Ordinary 3/8" NPT to AN, or 3/8" NPT to barb fittings may be used, making plumbing easy to do and the fittings inexpensive.

- Dual Stage pressure control with one regulator.
- Controls pump/line pressure from 8-16 PSI.
- Controls carburettor pressure from 5-9 PSI.
- Allows use of the stock EFI, in-tank fuel pump.
- Permits use of the stock supply line and filter.
- Allows use of the stock EFI return line.
- 3/8" NPT inlet and return, plus two outlet ports.
- Compact, all-in-one, Dual Regulator design

ARO13220 Dual Stage Regulator with 3/8" NPT Inlet/Outlet

FORD RAIL MOUNT REGULATOR

Adjustable billet fuel pressure regulators designed to handle the demands of the Ford 4.6L, 5.0L and 5.4L engines. Installs easily on the stock factory fuel rail.

- Adjustable from 30-70 PSI.
- Fuel pressure rises on a 1:1 ratio when referencing boost.
- 1/8" NPT gauge port.
- Stainless steel spring, custom-designed for precise fuel control.
- Installation kit includes O-rings and gaskets.

ARO13103 Ford 5.0 EFI Rail mount Regulator

A1000 Injected Bypass Regulator

For performance EFI applications, on the street or at the track. The Aeromotive A1000 Injected Bypass Regulator was developed for medium to high horsepower EFI applications. Compatible with the Aeromotive A1000, Tsunami and 700 HP EFI Fuel Pumps. This regulator is rated for continuous duty or racing applications and delivers the highest flow and pressure control available. Intended for use with custom fuel rails, this true billet regulator was designed specifically for use with our A1000 Fuel Pump. Base pressure (vacuum/boost disconnected) adjustable from 40 to 75 PSI. Two -10 AN inlet ports, one -6 AN return port and 1/8" NPT gauge port. Beautifully finished with type II bright dip red and black anodized coatings. Alcohol compatible. Fuel Pressure will rise on a 1:1 ratio when referencing boost.

Fittings Sold Separately
ARO13101

A1000-6 Injected Bypass Regulator (black)

Performance EFI regulator designed for medium to high horsepower applications. This regulator features Aeromotive's high-flow design, superb pressure control and legendary durability. On the street and at the track, this pressure regulator has logged more miles, laps and passes than any other performance EFI regulator in the world!

- Base pressure adjustable from 40-75 PSI.
- Gasoline and alcohol compatible.
- Fuel pressure rises on a 1:1 ratio with boost.
- 1/8" NPT gauge port.

A1000-6 Injected Bypass Regulator

ARO13131

A1000 GEN-II EFI REGULATOR

This next generation A1000 EFI regulator features legendary Aeromotive flow and pressure control in a new body, profiled for reduced size and weight. This new, patented design features a deep, bright-dip black anodized finish on the cap and base, with AN spec ORB (o-ring boss) style inlet/outlet and return ports.

- Engineered for A1000 class and smaller pumps.
- Gas, ethanol, methanol and diesel compatible.
- 40-75 PSI adjustable base pressure range.
- 1:1 vacuum/boost reference capability.
- 1/8" NPT dedicated gauge port.

- ARO13139 2 Port Regulator with -8AN Inlet/Outlet & -6AN Return**
- ARO13140 2 Port Regulator with -10AN Inlet/Outlet & -6AN Return**

Compact EFI Regulator

For applications producing up to 1,000 HP where space is at a premium, flows enough to handle 1,000 HP fuel pumps. Ideal for EFI systems where only one inlet is needed. Adjustable from 30 to 70 PSI. Equipped with removable -6 AN male fittings for inlet and outlet ports. Dedicated, 1/8" NPT gauge port located opposite the side inlet. Vacuum/boost port relocated to the side of the cap for easier pressure adjustments. Fuel pressure will rise on a 1:1 ratio when referencing boost. Bright zinc-plated steel bracket. Compact EFI Regulator

ARO13105

EFI BYPASS REGULATOR

This EFI Bypass Regulator encompasses features and benefits only found on Aeromotive regulators and in a new smaller and lighter package. Capable of supporting applications up to 1000 HP, the 13129 EFI Bypass Regulator can handle high-flow EFI fuel pumps and the most aggressive street machines; especially those looking for a cleaner, lighter solution where performance is critical or where space is a premium.

- Base pressure adjustable from 30-70 psi
- Fuel pressure rises on a 1:1 ratio with boost
- Provides (2) ORB-06 inlet/outlet ports and (1) ORB-06 return port
- 1/8" NPT gauge port
- Vacuum boost port
- CNC-Machined 6061 T6 billet aluminium construction
- Stainless steel mounting bracket

ARO13129 EFI ADJ HI FLOW REG SMALLER DESIGN 1000HP 1.1

EFI BYPASS REGULATOR

This EFI Bypass Regulator encompasses features and benefits only found on Aeromotive regulators and in a new smaller and lighter package. Capable of supporting applications up to 1000 HP, the 13129 EFI Bypass Regulator can handle high-flow EFI fuel pumps and the most aggressive street machines; especially those looking for a cleaner, lighter solution where performance is critical or where space is a premium.

- Base pressure adjustable from 30-70 psi
 - Fuel pressure rises on a 1:1 ratio with boost
 - Provides (2) ORB-06 inlet/outlet ports and (1) ORB-06 return port
 - 1/8" NPT gauge port • Bright Dip Black Anodized Finish
 - Vacuum boost port • CNC-Machined 6061 T6 billet aluminium construction • Stainless steel mounting bracket
- ARO13136 2 Port Regulator with -6AN Inlet/Outlet & -6AN Return**

Extreme Flow 2-Port Efi Regulator

Designed for use with Eliminator, Pro-Pump and Dual A1000 fuel systems

- Compact, 2-Port Body with dual AN-10 inlet/outlet ports and one AN-10 return port
 - 0.313" High Flow Valve/Seat, able to handle 3-9 GPM Fuel Pumps Dual Springs expand operating pressure range while maintaining a low profile and reduced weight
 - Standard spring (installed) supports 30-75 PSI base fuel pressure • High Pressure spring (Included) supports 75-120 PSI base fuel pressure
 - Supports vacuum and boost reference on a 1:1 ratio with PSI
- ARO13134 Extreme Flow 2-Port Efi Regulator With -10AN Ports**

Pro-Series Boost Reference Efi Regulator

For high horsepower EFI applications supports 2000 HP. If your EFI Engine requires high volume, high pressure fuel delivery, you need the Pro-Series Boost Reference Efi Regulator.

- Recommended for use with Aeromotive Eliminator Fuel Pump P/N 11104 and Pro-Series Fuel Pump P/N 11102. References Vacuum/Boost on a 1:1 ratio. Includes two boost line adapters, one for rubber hose and barb, the other for -4 AN braided line, to prevent blow-off in high boost applications. Adjustable base pressure from 30 to 60 PSI. Aeromotive's exclusive fittings are included: -three -8 AN and one -10 AN inlet ports, two with -8 flare adapters. -One -10 AN return port with -10 flare adapter. Auxiliary ports available for nitrous fuel supply, pressure gauges and data-log transducers. Virtually indestructible electroless nickel-plating finish on the body. Cap is a type II bright dip black anodized finish. Dedicated 1/8" NPT port for mechanical pressure gauge.
- Pro-Series Boost Reference Efi Regulator ARO13110**

EXTREME FLOW EFI REGULATOR

Designed for use with Belt or Hex Drive Fuel Pumps. Expanded, 5-Port Body with 1 - AN-10 plus 4 AN-08 inlet/outlet ports, and one AN-10 return port. 0.500" High Flow Valve/Seat, able to handle 7-26 GPM Fuel Pumps Dual Springs expand operating pressure range while maintaining a low profile and reduced weight. Standard spring (installed) supports 30-75 PSI base fuel pressure. High Pressure spring (included) supports 75-120 PSI base fuel pressure. Supports vacuum and boost reference on a 1:1 ratio with PSI

Extreme Flow 5-Port Efi Regulator ARO13133

Extreme Flow Belt Or Hex Drive Regulator

Our ALL-NEW Extreme-Flow Efi Regulator now comes with -12 ports! It's designed for use with Belt or Hex Drive Fuel Pumps. Other benefits include:

- Compact, 2-Port Body with dual ORB-12 inlet/outlet ports and one ORB-12 return port.
 - 0.500" high-flow valve/seat, able to handle 7-32 GPM Fuel Pumps.
 - Dual springs expand the range of operating pressure while maintaining a low profile regulator with reduced weight.
 - Standard spring (installed) supports 30-75 PSI base fuel pressure.
 - High Pressure spring (included) supports 75-120 PSI base fuel pressure.
 - Supports vacuum and boost reference on a 1:1 ratio with PSI.
- ARO13132 2 Port Regulator with -10AN Inlet/Outlet & -10AN Return**
- ARO13137 2 Port Regulator with -12AN Inlet/Outlet & -12AN Return**

Ultra High Flow Belt/Hex

Drive Efi Regulator

The Ultra-High Flow Belt/Hex Drive Efi Regulator is adjustable from 40-100 PSI. Engineered for our Belt-Drive and Hex-Drive Fuel Pumps, this regulator is suitable for engines making up to 4,000 HP on gasoline and is compatible with gasoline or methanol.

- Perfect for any mechanically driven Efi fuel pump developing over 200 GPH at Efi pressure.
 - Base pressure adjustable from 40-100 PSI.
 - References Vacuum/Boost on a 1:1 ratio. Includes two boost line adapters, one barbed for rubber hose, the other for AN -4 braided line. (Prevents blow-off in high boost applications)
 - Ports available for nitrous fuel supply, pressure gauges and transducers. • (4) ORB-08 inlet ports, (1) ORB-10 inlet port and (1) ORB-10 return port.
- Ultra High Flow Belt/Hex Drive Efi Regulator, ARO13111**

MARINE A1000 RETURN STYLE REGULATOR

Full volume at perfect pressure, the A1000 Regulator was designed for use with our Marine A1000 Fuel Pump or any similar style pump. This regulator is perfect for naturally aspirated or 'blow-through' turbo-charged or supercharged engines.

- Base fuel pressure adjustable from 3-15 PSI
 - ORB-10 inlet port and (1) ORB-8 return port.
 - ORB-6 outlet ports and 1/8" NPT gauge port.
 - Fuel pressure rises on a 1:1 ratio when referencing boost
- 2 Port - 6 ORB Regulator with 10ORB Inlet / -8 ORB Return ARO13207**

Marine A1000 Efi Bypass Regulator

A true performance Efi Regulator designed for medium to high horsepower marine applications. Features Aeromotive's high-flow design, superb pressure control and legendary durability. This pressure control regulator has logged more hours than any other performance Efi marine regulator in the world!

- Base pressure adjustable from 40-75 PSI
 - Fuel pressure rises on a 1:1 ratio with boost
 - 1/8" gauge port included
 - Provides (2) ORB-10 inlet ports and one ORB-06 return port
- ARO13114 2 Port Regulator with -10AN Inlets & -6AN Return**

REGULATOR FITTING KIT

More area and smoother transitions from the inlet to the outlet, resulting in less restriction than any other fitting line. The Aeromotive line of custom fittings, adapters and hose-ends are a step above the norm, offering uncompromised fuel flow and positive sealing. Constructed of 6061 T6 aircraft grade aluminium or stainless steel, each component is CNC-machined for precision fit and unmatched flow. All billet aluminium fittings are anodized Type II bright dip black for corrosion protection and unrivaled aesthetics.

- (4) AN-06 to AN-06 Male Flare Fittings
 - AN-10 to AN-10 Male Flare Fittings
 - AN-10 Port Plug
- Black AN Regulator Fitting Kit ARO13203**

FUEL PRESSURE

REGULATOR BREATHER

Replacement breather for the vacuum/boost nipple that comes stock in all Aeromotive Bypass Regulators. Perfect for any application that does not require fuel pressure to be influenced by manifold pressure.

- 1/16" NPT Male threads directly into the regulator vacuum/boost port.
- Machined from bronze, compatible for installation into aluminium ports.
- Bronze breather element allows air to move into and out of the regulator cap as needed while stopping dirt and debris from entering the regulator cap / spring housing.
- Direct replacement for all Aeromotive bypass regulators where needed.

ARO15662

FPR6 Fuel Pressure Regulator

The TurboSmart FPR6 Series provides market-leading fuel control and response via true 1:1 ratio and superior flow and bypass capacity for vehicles with -6 / 6AN fuel systems. Utilising our Stainless Steel Valve Seat & Milspec Diaphragm the FPR6 Series is suitable for all Fuel types including Race Fuel and aggressive leaded fuels. Our FPR6 Range includes 6AN inlet and outlet and return fittings and is Available in Standard (35psi to 80psi) as well as LP (3psi to 20psi) for Low Pressure and Carburettor Systems to suit 1200HP systems. Features: Stainless Steel Valve Seat. Suitable for all fuel types 1:1 Class Leading Ratio & Response. Adjustable Pressure 1/8 NPT Pressure Sensor Port. Unique Locking Collar Design Milspec Diaphragm. FPR800 Fuel Pressure Regulator

Turbosmart's FPR800 is a motorsport proven fuel pressure regulator capable of supporting up to 800HP fuel systems. With Stainless Steel valve and seat, MILSPEC diaphragm and industry leading 1:1 fuel ratio control, there's no application to harsh for the FPR800. Available in Black, Blue, Red and Purple the FPR800 is easily at home in race application or modified street car. Featuring two 1/8" NPT inlet ports, one 1/8" NPT return port and 1/8" gauge port, 30-90 PSI base pressure adjustment, 1:1 ratio, premium MILSPEC diaphragm and stainless steel valve + seat allow for ANY fuel type including E85 and is suitable for engines with up to 800hp fuel systems. Turbosmart FPR's feature a non-directional bias to regulation, so no matter where the fuel comes in they will regulate the same. Features: Efi fuel regulator. 3 x 1/8" NPT ports. 1/8" NPT Gauge port Capable of regulating up to 800hp of fuel flow . 1:1 manifold pressure ratio with no load losses . 30-90psi base pressure range Stainless steel internals providing maximum integrity and reliability Suitable for all fuel types. Operational between -35°C to +200°C MILSPEC diaphragm . Reference port is 1/16 NPT with hose end nipple supplied. Manufactured, Assembled and Validated in-house at Turbosmart HQ

FPR12 Pro M 5 Port Mechanical Pump

The Turbosmart FPR Pro 12 Series provides market leading fuel control and response via true 1:1 ratio and superior flow and bypass capacity for vehicles with -12 / 12AN fuel feed and -10 / 10AN return fittings. Utilising our Stainless Steel Valve Seat & Milspec Diaphragm the FPR12 Pro Series is suitable for all Fuel types including Race Fuel and aggressive leaded fuels. Our FPR12 Pro Range includes 1 x 12AN inlet, 4 x 10AN outlet ports and a 10AN return and is available in Pro EFI (50psi to 130psi) and Pro M (50psi to 100psi) for Mechanical Pump Systems.

Features: Stainless Steel Valve Seat. Suitable for all fuel types 1:1 Class Leading Ratio & Response. Adjustable Pressure 1/8 NPT Pressure Sensor Port. Unique Locking Collar Design Milspec Diaphragm. Detailed Specific Fuel Flow Data & Spec **TS-0404-1352**

FPR12 Pro 5 Port EFI

The Turbosmart FPR Pro 12 Series provides market leading fuel control and response via true 1:1 ratio and superior flow and bypass capacity for vehicles with -12 / 12AN fuel feed and -10 / 10AN return fittings. Utilising our Stainless Steel Valve Seat & Milspec Diaphragm the FPR12 Pro Series is suitable for all Fuel types including Race Fuel and aggressive leaded fuels. Our FPR12 Pro Range includes 1 x 12AN inlet, 4 x 10AN outlet ports and a 10AN return and is available in Pro EFI (50psi to 130psi) and Pro M (50psi to 100psi) for Mechanical Pump Systems.

Available in Pro (EFI) and Pro M (Mechanical Pump) – Suits Up to 3000HP Systems.
Features: Stainless Steel Valve Seat. Suitable for all fuel types 1:1 Class Leading Ratio & Response. Adjustable Pressure 1/8 NPT Pressure Sensor Port. Unique Locking Collar Design Milspec Diaphragm. Detailed Specific Fuel Flow Data & Spec **TS-0404-1252**

FUEL SYSTEM FITTINGS

QUICK CONNECT FITTING

The Aeromotive line of custom fittings, adapters and hose-ends are a step above the norm, offering uncompromised fuel flow and positive sealing. Constructed of 6061 T6 aircraft grade aluminum or stainless steel, each component is CNC-machined for precision fit and unmatched flow. All billet aluminum fittings are anodized Type II bright dip black for corrosion protection and unrivaled aesthetics. We offer a complete line of hard-to-find fittings from OEM specific connections to AN adapter.

ARO15118 3/8" Female Quick Connect to ORB-08 Port

ONE-WAY AN-10 CHECK VALVE

- For installation after pump, before regulator.
- Requires ORB-10 to AN outlet fitting.
- Gasoline only, not rated for alcohol fuels.

FUEL PUMP INLET ADAPTER

The Aeroflow Performance fuel pump inlet adapter is designed for remote mounting a fuel filter screen inside a fuel tank or fuel cell. When a new 40mm fuel pump is installed in some cases the fuel pump is not going to sit low enough to pick up fuel from the bottom of your tank.

This black anodized billet aluminum adapter secures to the pump inlet with a star washer and a preloaded stainless steel bracket design. The adapter uses a machined barb 3/8" (9.52mm) nipple and features an integrated O-ring for sealing. NOTE: It is NOT intended to turn an in-tank fuel pump into an external inline fuel pump. Will only suit 40mm diameter fuel pumps such as AF49-1040, AF49-1041, AF49-1042, AF49-1057.
AF64-2170BLK

BARB to AN FLARE ADAPTERS

No welding...no clamps...no hassle with this unique O-ring design. This revolutionary fitting allows you to convert any barb plastic or metal over to the ever popular range of AN style fittings in our inventory. It comes in several popular sizes to suit all your needs including 5/16", 3/8", 1/2" and 15mm barb sizes which accommodates a variety of electric oil and fuel pumps.

PUSH ON EFI FUEL FITTING TO ORB MALE

Add new part numbers page 186

This Aeroflow range of EFI quick connect fittings to male ORB is designed to adapt aftermarket fuel rails, fuel regulator or anything with a female ORB. It will connect to the factory OE hard line push on connectors or the extensive range of nylon or billet EFI push on fittings from Aeroflow Performance.

90° LOW PROFILE ORB to EFI PUSH-ON ADAPTERS

Aeroflow have designed these low profile 90 degree ORB to EFI push on male adapters that are perfect for tight clearance applications. The EFI push male fitting is perfect for OEM applications and designed specifically to suit the range of Aeroflow Performance billet quick connect EFI fittings as well. They swivel 360 degrees allowing you get your desired position and are hi flow so not only are they low profile they do not restrict flow. Manufactured from 6061-T6 aerospace grade aluminium and available in Blue, Black and Silver anodized finishes. Supplied with Viton O-rings and available in straight and stepped sizing ranging from -6 to -10ORB to various barb sizes.

NYLON PUSH-IN TO BARB EFI FUEL FITTINGS

The nylon quick connect push on fittings manufactured by Aeroflow Performance provide fast and secure connections. Nylon fittings are the best of choice by manufacturers for OEM applications. One downside to these fittings is that the quick connectors with age the compromise the security of the connection leading to necessary replacement.

The Aeroflow Performance range of nylon push-on EFI connectors suit a wide range of different sizes and angles to accommodate every application. The nylon is resistance to most fuel types including alcohol-based fuels and the operating temperature range of -30 to 120 degrees Celsius. These fittings disconnect by pushing-in and disconnect by simply pulling out while pressing the lock buttons. Each fitting is designed specifically to suit the range of Aeroflow

STRAIGHT PUSH-IN TO BARB OE STYLE EFI FUEL FITTINGS

These push-in EFI fittings suit most late model cars with standard fuel lines.

AF49-7004	7.93mm (5/16") push-in to 7.93mm (5/16") male barb
AF49-7014	9.65mm (3/8") push-in to 9.65mm (3/8") male barb

STRAIGHT PUSH-ON TO BARB OE STYLE EFI FUEL FITTINGS

These push-in EFI fittings suit most late model cars with standard fuel lines.

AF49-7000	7.93mm (5/16") push-on to 7.93mm (5/16") male barb

STEPPED ONE WAY CHECK VALVES

Aeroflow's new One Way Check Valves. These check valves can be dismantled and the spring inside removed to double up to become a Rollover Valve. Being stepped from -12 to -8AN makes it perfect to run a fuel return line when used with Aeroflow fuel cells. -12AN in and -8AN out.

Part No	Colour
AF612-12-08	Blue
AF612-12-08BLK	Black
AF612-12-08S	Silver

Note: Spring can be easily removed to act as a inline roll over vent. Supplied with Buna N O-ring and EPR O-ring for use with Nitro blended fuels

Check Valve 5PSI Spring

This Check Valve 5 PSI spring is to suit Aeroflow's AF612 style One Way Check Valves. These check valve springs will have a spring crack pressure of 5 PSI.

Part No	Description
AF59-6121	Suits AF612-06 and AF612-08
AF59-6122	Suits AF612-10 and AF612-12
AF59-6123	Suits AF612-16

ONE WAY CHECK VALVES

Comes with 1.5 PSI spring

AN	Length	Blue	Black	Silver

-16	35mm 1-3/8"	AF612-16	AF612-16BLK	AF612-16S

OPTIONAL 5 PSI SPRING

AF59-6121 Suits -6 and -8 check valve
 AF59-6122 Suits -10 and -12 check valve
 AF59-6123 Suits -16 check valve
 Note: Spring can be easily removed to act as an inline roll over vent.
 Supplied with Buna N O-ring and EPR O-ring for use with Nitro blended fuels

SHUT OFF VALVES

Aeroflow's shut-off valves are also ideal for use as: • An emergency fuel shut-off • Anti-theft device
 • Drain valve • 300 PSI Max

K&N CLEAR FUEL FILTER

The K&N 81-0231 In-Line Gas Filter is perfect for racing applications and can be used with a variety of oils and fuels including methanol. The 81-0231 stainless mesh in-line fuel filter has a flange diameter of 1/4". It comes with a 1.34" body diameter by 1-3/4" overall length.

Description	Part No.
1/4" Clear Fuel Filter	KN81-0231

FILTER ELEMENT APPLICATION GUIDE

Micron	Particle Size	Colour	Application
40	.0018in	Blue	Fuel (Pump Gas)
60	.0023in	Black	Fuel / Oil / Alcohol / Methanol
100	.0039in	Gold	Oil / Alcohol / Methanol

PRO FILTERS

When excellent filtration is the key to fuel system performance Aeroflow's Pro Filters provide an inexpensive insurance policy to protect your investment. For 200 - 2700 plus HP applications, our filter assemblies offer unmatched flow and ease of maintenance and installation. The Pro Filters also include an internal magnet to catch fine particles and are available in blue, black and silver.

Furthermore Aeroflow's Pro Filters are:
 • Stainless steel reusable/washable element
 • CNC-machined from 6061-T6 aircraft aluminium
 • feature serviceable filter elements
 Note: Use Aeroflow AF920 series fittings for positive sealing in high pressure applications.

AEROMOTIVE FUEL FILTERS

For 200-3,000HP plus applications - these filter assemblies offer unmatched flow, ease of maintenance and installation, plus the impeccable machine work and finish you've come to expect of all Aeromotive components. The 10 micron filter is for use after the fuel pump and the 100 micron filters are designed to go before the fuel pump. -10AN filters are anodized red and -12AN filters feature a high gloss nickel finish.

AEROMOTIVE REPLACEMENT

IN-LINE FILTER ELEMENTS

Commonly the most overlooked component in a fuel system, filter neglect can be the most costly. If not cleaned or replaced regularly, filter elements can become clogged resulting in reduced fuel flow, engine performance and ultimately, fuel pump or even worse, engine damage. By simply replacing and/or cleaning your filter elements regularly, you can avoid costly repairs to your fuel system and ensure peak engine performance. Aeromotive recommends annual inspection and service of filter elements. This includes replacing 10-micron fabric elements and cleaning or replacing 100-micron stainless steel elements. Severe duty applications or newly installed systems may require more frequent maintenance

SHUTOFF VALVE FUEL FILTER

Ever take a fuel bath when changing your filter?

We have a solution! Cleaning and replacing your filter elements used to mean draining your gas tank. The new Aeromotive Shutoff Valve Fuel Filters allow you to shutoff fuel flow and replace your filter elements with little or no fuel loss. Both feature 100-micron stainless steel elements and are recommended for use between the fuel cell or sumped tank and the fuel pump inlet.

- ORB-10 ports
- 100-micron stainless steel (coarse) cleanable element.
- Dimensions: 7.38" long x 2" diameter
- Proprietary stainless steel shutoff valve design.
- Type II bright dip black anodized assembly and red anodized billet aluminum shutoff valve handle.

MECHANICAL FUEL INJECTION

Tunnel Ram Injectors

The tunnel ram conversion allows you to run supercharger style fuel injection on a non supercharged engine with a tunnel ram. Adaptors are available for Edelbrock Victor rams and can be fabricated to suit other brands of manifold. Tunnel ram injectors include metering valve, idle check valves, bypass pills, dist. block, nozzles and fuel lines for the manifold. The manifold, manifold top, pump, drive and shut off must be ordered separately.

PART NO	DESCRIPTION

Blower Injectors

Bugcatcher, Birdcatcher and Big & Ugly injectors bolt directly to all standard 6-71 and 8-71 blower openings. When used with larger superchargers such as the 14-71 an adaptor is required for the larger inlet. Buzzardcatcher and Barndoor injectors bolt directly to the 14-71 inlet and cannot be used with smaller blower inlets. Blower injectors include metering valve, fuel Lines, nozzles, dist. block, bypass pills and a high pressure relief check valve is included with nitro style metering valves. The pump, drive and shut off must be ordered separately.

EN4005F

Throttle Body Style Injectors

Enderle throttle body style injection allows you to convert any single or dual 4 barrel carburetor manifold to run constant flow injection. The throttle body has a single 4" butterfly and bolts to any standard 4150 squarebore carburetor flange. Single butterfly injectors include metering valve, fuel lines, nozzles, bypass pills, idle check valves. The manifold, pump, drive and shut off must be ordered separately.

PART NO	DESCRIPTION
EN2020-39	Single Throttle Body Injector For Methanol With 4150 Flange
EN2030-39	Dual Throttle Body Injectors For Methanol With 4150 Flanges

Fuel Pumps

Enderle Fuel Pumps for mechanical injection can also be used in high flow carburetor and EFI applications. They are normally run at 1/2 of engine RPM and can be cam or belt driven. Flow figures are measured at 4000 RPM shaft speed at 100 PSI.

Fuel Pump Hex Drives

Drive your Enderle fuel pump directly off your engines camshaft. Big block Chevs can mount the pump directly to the timing cover. The 4" Extension is required to clear the harmonic balancer on Small Block Chevs and the 6" extension is used in blown applications to bring the pump out past the blower belt.

Metering Valves (Barrel Valves)

The metering valve is the heart of the fuel injection system. The metering valve or barrel valve houses the main jet (bypass pill) and controls fuel volume at idle and in stage. The nitro style methanol metering valve is used in high horsepower blown applications and the standard methanol metering valve is used in most other methanol applications.

Shims and Springs

These shims and springs are used to adjust the pressure of Enderle check valves.

EN6006-###	Shim For -6AN Check Valve - Specify Size
EN6007-###	Spring For -6AN Check Valve - Specify Pressure
EN6014-###	Shim For -8AN Check Valve - Specify Size
EN6015-###	Spring For -8AN Check Valve - Specify Pressure

High Speed Accessories

A high speed bypass is used to return extra fuel to the tank at high RPM for more horsepower and higher terminal speed. To add a high speed to an engine you need a high speed tee, check valve, pill holder and bypass pill.

EN7000	Hi Speed Tee, -10 Bulkhead / -10AN Male with -8 Female
EN7001	High Speed Tee Fitting -8AN
EN7002	High Speed Tee Fitting -6AN to -6AN Bulkhead

EN7001CC	Double High Speed Tee Fitting -8AN Inline Tees
EN7003	Hi Speed Pill Holder -8AN O-Ring to -6AN Check Valve

Inline Return Line Assembly

Peterson's inline return line assembly allows fuel system return lines to be put back into the fuel system inlet line rather than returning to the tank. The assembly incorporates an internal diffuser tube which keeps aeration to a minimum and keeps the return line fluid from disrupting the main line flow. Complete with 2 x -6 AN return line fittings.

PFS09-2940	-10AN Inline Return Line Assembly
PFS09-2960	-12AN Inline Return Line Assembly

INJECTOR HAT ADJUSTABLE AIR BLEED

This great design allows you to set the idle once and use this great product to adjust the air mixture for easy and instant tuning. 1/4 NPT thread into injector hat.

AF49-2000S	Silver
AF49-2000BLK	Black

ENDERLE THROTTLE CABLE BRACKET

This throttle bracket is one of the cleanest, nicest and strongest on the market. It is made from 6061 billet aluminium and polished or black finish. Machined out of solid piece not welded. This bracket Mounts to the bottom of bird catcher injectors and can be used on other injectors. The bracket has multiple holes for mounting the throttle cable bracket with 10-24 bolts. Kit comes with billet throttle bracket and mounting bolts for the cable connector, which is not supplied in the kit

Description
Enderle Bird Catcher Throttle Bracket, Polished **Part No. CV4000**
Enderle Bird Catcher Throttle Bracket, Black **CV4000-B**

Check Valves

The Enderle check valve can be used as a high speed bypass, idle can, pump sizer or in any other application that requires an adjustable poppet. Pressure is adjusted with shims and springs. If a bypass pill is required, use a -6AN check valve with the high speed pill holder, part number EN7003.

HIDDEN EFI KITS

All kits come with all necessary fittings and hardware, they do not include any electrical equipment such as injectors. All kits except JB008 are fully polished on outer surfaces.

EFI KIT FOR BUG AND BIRD CATCHERS

Fits inside most injector hats, hiding all the injectors, wiring and fuel lines.

Throttle position switch fits inside a block that looks just like a fuel barrel valve, get the mechanical injection look but with electronic adjustability.

Comes polished and with all fittings.
PART # JB001

Big & Ugly and Shotgun EFI Kit

This kit allows you to fit 9 EFI injectors into a big and ugly or shotgun injector. Because of the swoopy rear of these two injectors our original design didn't fit inside them, so we re-designed it so it did. As the 8 injectors have been moved forward we had to add a 9th injector which sprays fuel to the rear, this is to keep the rear of the rotors wet to keep the cool.

RP-JB005 - Hidden EFI kit, suite big and ugly and shotgun injector

Big and Ugly Throttle Bracket

Billet aluminium throttle cable bracket to suit Big and Ugly injectors, comes pre drilled with pilot hole so you can drill to suit your cable.

RP-JBBAUBRKT

EFI ENDERLE INJECTOR HARNESS

To make installation of Joe Blow EFI kits easy, we can supply ready to go wiring looms that fits EFI kits perfectly.

- RP-JB-BUG-W** Bug & Bird Injectors.
RP-JB-BAU-W Big & Ugly Injectors

JOE BLO INJECTOR MESH FILTER SCREEN

Billet framed mesh filters simply slip over the front of the injectors, secured with 2 small grub screws to the injector. Mesh has a 1mm x 1mm (.040") square hole & easily removes for cleaning.

- RP-JB-BIRD-F** Bird Injector Mesh Filter Screen
RP-JB-BUG-F Bug Injector Mesh Filter Screen

JOE BLOW EFI TPS Sensor

This tricky little item is a replica of an Enderle square barrel valve. When running an EFI system you must have a throttle position sensor (TPS), this sensor is connected to the throttle linkage and lets the computer (ECU) know where the throttle position is.

We designed this block to hide the TPS switch and complete the over all look of the EFI system, after either braided hose or stainless steel line is connected it really looks like you have mechanical injection system. The wiring from the TPS is run through the line and around to the back of the injector.

- RP-JB003** TPS Block only **POLISHED** (no sensor)
RP-JB003B TPS Block only **BLACK** (no sensor)
RP-JBTPS sensor only, suit billet TPS block (JB003 & JB003B)

EFI FUEL SYSTEMS

FAST EZ-EFI SELF TUNING FUEL INJECTION

In the past, carburettor-to-EFI conversion was no picnic. At the very least, you would need a laptop and significant tuning experience. But thanks to FAST engineers, those days are over. With the new EZ-EFI Self Tuning Fuel Injection System, you get patent-pending EFI technology that does all the work for you. Simply hook it up, answer the basic set-up Wizard questions on the included hand-held display, and the system tunes itself as you drive! The new EZ-EFI Self Tuning Fuel Injection System provides you with the complete EFI package, including the ECU, wide-band O2 sensor, wiring harness, fuel injectors, an optional fuel pump kit and other assorted components, including the innovative 4150 Throttle Body from FAST. This cast throttle body gives you the total package for your existing 4150-type manifold and comes with everything, including the appropriate fuel injectors and fuel rails. Regardless of your brand or size, this system bolts-on easily to any carburetted engine with up to 600 horsepower - NO manifold replacement needed. In addition to matching any carburetted manifold, the EZ-EFI Self Tuning Fuel Injection System also works with your original carb style throttle linkage and is ready to accept all OEM sensors. The EZ-EFI can be installed easily in an afternoon and is a "must have" for your street rod or muscle car.

- Self-tuning system - NO tuning experience or laptop needed
- Complete system includes mini ECU, wide-band O2 sensor, wiring harness, injectors, fuel pump kit & 4150 throttle body
- 4150 throttle body works with original carb-style linkage & accepts all OEM sensors
- Bolts on to any engine under 600 hp, regardless of brand or size; the perfect choice for street rods & muscle cars
- Easy-to-use set-up Wizard provides a comprehensive walk-through & system tunes itself

FAST30227

EZ-EFI 2.0 MULTI-PORT RETRO-FIT SELF TUNING ENGINE CONTROL SYSTEM

The next generation of the revolutionary self tuning EZ-EFI has been upgraded with more features than ever before. Yet it maintains ease-of-use that doesn't require a laptop or tuning experience. As with the original EZ-EFI, simply hook up the system, answer the Setup Wizard questions on the hand-held, and EZ-EFI 2.0 tunes itself as you drive. New high-quality wiring harness with a sleek mesh-type loom uses commonly available late model OEM sensors for accuracy and durability.

- Features:**
- No Laptop or tuning experience required; Self tunes as you drive
 - Touchscreen hand-held doubles as sensor dash w/ suction-cup mount
 - Works w/ carb-type dist. or FAST Dual-Sync Dist. for plug-and-play timing control
 - ECU includes on-board LED diagnostics & EZ-Test indicator lights
- Retro-Fit Kit Includes:**
- EZ-EFI 2.0 ECU w/ wide-band o2 sensor
 - Clearly labeled retro-fit wiring harness w/ mesh loom
 - Fuel pressure sensor & mounting block/adaptor
 - Touchscreen hand-held w/ mount

FAST30404-KIT

FAST THROTTLE POSITION SENSOR, FORD

The throttle position sensor bolts to the throttle blade shaft and relays throttle opening/closing information to the system ECU. The TPS is constructed of high resistance material with a "sensitive" rotator for accurate throttle position measurement.

FAST307005

FAST307028

FAST XFI Electronic Fuel Injection Systems

Here's the one electronic fuel injection system with truly revolutionary features and capabilities in an easy-to-use package. The FAST XFI system precisely balances fuel and spark, allowing you to fine tune like never before. The XFI system comes with easy-to-navigate software that's completely configurable and allows you to set the parameters. Faster processing means no more flat spots in the power curve or settling for "close enough." XFI is compatible with all common ignition types, including GM HEI, LT1, LS1, -2, -6, -7 DIS, Ford EDIS (4.6L & 5.4L), and Chrysler 5.7L, 6.1L Hemi applications.

Standard Features Include:

- Built-in wide-band O2
- Fully sequential and/or bank-to-bank capability
- Individual cylinder correction
- Fan and fuel pump control
- Dynamic scaling of vectors in 2D & 3D tables
- Scalable TPS, air temp, water temp and MAP calibrations
- 1, 2, 3 and 5 bar MAP capability
- Spare inputs/outputs for functions such as shift light, fan control etc.
- Torque converter lockup control
- Air conditioning wide-open throttle cutout
- Boost control
- Enhanced 4 stage power adder controls
- Multiple calibration stored in ECU w/ switching capability
- L-key function for easy steady-state correction using wide-band O2
- On-board diagnostics
- Fuel and oil pressure logging
- Adjustable ignition timing
- Multiple ignition strategies, such as HEI, DIS, TFI, Ford EDIS, IPU

XFI Electronic Fuel Injection Kits

FAST now offers bolt-on XFI kits that include everything needed to install fully sequential EFI on Small and Big Block Chevy and Small Block Ford engines from mild street rods to 1,000 hp all-out race cars. XFI Fuel Injection Kits include carefully matched components, including the XFI, Dual-Sync Distributor, a single plane aluminium intake manifold, 4 barrel throttle body, proper size Precision-Flow Fuel Injectors, aluminium fuel rails, fuel pump kit, all necessary sensors, professional quality wiring harnesses with labelled connectors and the FAST EFI Installation & Tuning DVD. See the tuning section of this catalogue for the compatible XFI touch screen dash logger.

FUEL INJECTOR ADAPTER HARNESS

To further serve the needs of late-model GM performance tuners, FAST™ has also developed a full line-up of fuel injector adapter solutions. FAST™ adapter harnesses and connector kits enable easy retro-fit of both new and old style electronic fuel injectors. New-style fuel injectors, such as those found on GM's Gen IV engines featuring USCAR connectors, can now be retro-fitted and used on vehicles equipped with older-style Minitimer connectors. Retrofitting a Minitimer injector into an USCAR harness is also possible with another newly developed FAST™ adapter harness. Connector kits, complete with terminals, seals, and plugs, are available as well, allowing direct re-termination of existing harnesses with the correct connectors, either Minitimer or USCAR. USCAR-Type To Minitimer-Type Fuel Injector Adapter Harness **FAST170603-1**
 Minitimer-Type To USCAR-Type Fuel Injector Adapter Harness **FAST170604-1**

EZ-EFI® 600 HP FUEL PUMP KIT

FAST has taken the next step in making EFI easier with these new FAST fuel system kits. They cover all street performance applications and most bracket and super class drag racing categories. FAST fuel system kits are perfect for those switching from carburettor to EFI, building new EFI engines, or simply upgrading their current fuel system. In one part number, they include everything you need to supply your state-of-the-art high performance fuel system. Best of all, the components used to create the FAST fuel system kits are made of aluminium and stainless steel to ensure years of long, trouble-free service.

FAST307503

FAST307059

FAST307014

IAC GM LS1 STYLE

The idle air control allows the ECU system to control engine idle speed by controlling airflow around the throttle body blades.

- FAST307014 GM TPI STYLE
- FAST307059 GM LS1 STYLE

COOLANT TEMPERATURE SENSOR

Utilizes a brass-plated thermistor to measure engine coolant temperature. As the engine operating temperature increases, the resistance in the thermistor decreases, informing the ECU to adjust fueling.

FAST307003

AIR TEMPERATURE SENSOR - 3/8" NPT

Monitors incoming air temperature for the ECU system. This information helps the ECU inject the proper amount of fuel into the system.

FAST307004

FAST MAP SENSOR

This sensor, by monitoring intake manifold vacuum, measures the amount of load being placed on the engine. The MAP sensor relays engine load output to the ECU, which in turn adjusts fueling for optimum performance and economy.

Available as 1 bar, 2 bar, 3 bar or 5 bar sensors.

- FAST307007 1 BAR MAP SENSOR
- FAST307054 2 BAR MAP SENSOR

MAP SENSOR

A MAP sensor is required for the Boost Retard feature. Be sure to know the approximate amount of boost you will be running in order to select the correct sensor.

- MSD23111 1-BAR, 2-15 psi
- MSD23121 2-BAR, 2-30 psi
- MSD23131 3-BAR, 2-45 psi

ATOMIC TBI THROTTLE POSITION SENSOR MODULE

The Atomic TBI Throttle Position Sensor Module is designed for use with the MSD Atomic Throttle Body Fuel Injection system. It connects inline to the Atomic TBI communication network and provides a common 0-5 volt throttle position output signal that is required for the operation of an electronic overdrive transmission or other accessory.

MSD2939

Replacement Atomic oxygen sensor

HOLLEY SNIPER EFI MASTER KIT

Holley just brought EFI within range – introducing Sniper EFI master kits! It's economically priced so you can have all the benefits of EFI and still have money to finish or upgrade the rest of your ride! Perfect for street rods, muscle cars, off road trucks or nearly any carburetted vehicle. The Sniper EFI master kit contains the most complete EFI fuel system on the market. Everything is included to completely plumb your fuel system including; 20 feet of 3/8" EFI Hose, in-line fuel pump, post and pre fuel filters, return bulkhead, and all of the necessary fittings and hardware. Put an end to cold start issues, hesitations, vapour lock, and flooding. Upgrade to Sniper EFI and get the tactical accuracy of EFI today!

- Bolt on carburettor replacement (designed to fit single & dual carb manifolds)
- Throttle body mounted ECU – no extra boxes to mount
- Supports up to 650hp (4 injector version) and 1250hp (8 injector version)
- 4 wire vehicle connection (Battery +, Battery -, Switched Ignition & RPM)
- Includes complete fuel system consisting of, 20ft of 3/8" Vapour Guard Fuel Hose, 12-920 Fuel Pump, Filters, necessary hardware and bulkhead fitting to return fuel into the tank!
- Integrated fuel pressure regulator
- Integrated ignition timing control & coil driver
- Colour touchscreen for setup and gauge views
- Calibration Wizard (Answer a few questions about your engine and it creates the base map, then starts tuning on its own!) - NO laptop required!
- Self-tuning ECU means you don't have to be a computer/tuning wiz to have EFI!
- The included Wideband Oxygen Sensor provides real time Fuel Map Learn!

TERMINATOR EFI 4BBL THROTTLE BODY FUEL INJECTION SYSTEM

An EFI System so easy and powerful you'll think it's alive! Simply bolt it on, feed it a few basic answers and let Terminator EFI take control of your ride!

- Easy to install
- No computer experience required
- Handheld tuner included
- Simple multiple choice set-up wizard
- Self-tunes while you drive
- Upgradable to complete laptop control without buying another ECU
- Carburettor replacement EFI from the fuel systems experts!
- 80 lb/hr injectors support 250-600 HP engines
- 950 CFM Throttle Body with CFD computer designed air-entry area
- Fits any square (Holley 4150) flanged intake

SNIPER EFI STEALTH 4500

Introducing the Sniper Stealth 4500 EFI System! Wanting to convert your Dragster or Pro-street vehicle to Fuel Injection? Look no further! The Sniper Stealth 4500 EFI system from Holley features 8, 100LB/HR Fuel Injectors capable of supporting 800 to 1500 HP naturally aspirated, or 800-1250 HP on forced induction applications. The Sniper Stealth 4500 also features multiple Input and Output options for sensor inputs and switched outputs to control external relays. This system also comes with a USB to CAN tuning cable and free downloadable Sniper EFI Software give you unlimited control of your engine

- Supports up to 1500 HP Naturally Aspirated or 1250 HP Forced Induction with Eight 100 Lb/Hr Injectors
- Compatible with Draw through or Blow through forced induction applications
- 2.125" Throttle Plates, Flow 1440 CFM for large cubic inch engines
- 2.5Bar MAP Sensor
- Integrated ignition timing control
- Programmable launch control via 2-step and timing retard. Both can be triggered by a trans-brake input
- Gen 3 Ultra Dominator Style 4 Bolt Air Cleaner Flange
- -BAN Fuel Inlets
- High Resolution Full Colour Touchscreen for Initial Setup, Tuning, and Gauge Displays
- Simple Calibration Wizard (Answer a few questions about your engine and it creates the base map, then starts tuning on its own!) - NO laptop required
- Self-tuning ECU means you don't have to be a computer/tuning wiz to have EFI!

TERMINATOR STEALTH EFI KIT

Have been hesitant on switching to EFI because you like the traditional look of a carburettor? There is no more need to worry! Holley has you covered with the new Terminator Stealth Throttle Body Fuel Injection System. Now you can have all of the benefits of EFI and maintain the traditional looks of a carburettor. Holley's Terminator Stealth EFI systems have the same great self-tuning features of our Terminator EFI in a new stealthy package!

- Easy to install
- No computer experience required
- Handheld tuner included
- Simple multiple choice set-up wizard
- Self-tunes while you drive
- Upgradable to complete laptop control without buying another ECU
- Carburettor replacement EFI from the fuel systems experts!
- Carburettor looks with the drivability of EFI
- Trouble-free performance with today's fuels - put an end to vapour lock and fuel varnish problems!
- Fits V8 engines from 250-600 horsepower
- 4150 style 4BBL mounting flange - Bolts on in place of carburettor
- Available in Polished, Classic Gold and Hard Core Grey finishes. A classic carburettor finish coming soon!
- Fully self-tuning ECU - No laptop required
- Includes full colour, 3.5" touch screen LCD for both basic and advanced tuning options
- Timing control option for GM Small Cap HEI and Ford TFI distributors
- Connections for Ford, GM TH350, 700R4 and other transmission linkages
- Optional free software upgrade for full laptop control
- Easy plug and play harnesses with minimal connections
- Virtually maintenance free - keeps your vehicle reliable and ready to drive

HP EFI ECU & HARNESS KITS

Looking for a plug and play alternative for your stock or built late model factory EFI engine? How about a replacement ECU for your older Holley C950? Holley has you covered. HP EFI ECU and harness kits are designed to be used with popular factory EFI engines as an alternative to the factory ECU and harness or as a replacement for your C950 ECU. The HP allows you to accurately control the fuel and ignition of your engine along with additional controls for nitrous, boost, or water meth.

Holley HP EFI systems are equipped with 4 programmable inputs and 4 programmable outputs that are ideal for most vehicles with a single power adder. This feature allows the user to configure the system to support a wide range of controls including boost control, progressive nitrous, water/meth injection, speed inputs, fuel pump control, AC inputs, timing retard inputs and various other uses. When selecting an ECU, users need to ensure their planned controls can be run with the 4 inputs and 4 outputs as certain combinations may use more I/Os than are available. If more I/Os are required, users should choose the Dominator VMS. NEW V2 SOFTWARE FEATURES

- "Quick Start" ignition and fueling strategy for LS x Engines
- Data Logger. Scalable axes, Smoothing, Multiple graph view ability. Pre-defined notes fields and many more
- Strip Chart Real-Time Data Viewer
- Integrated Boost Control - Boost vs Time, Boost vs Gear (Time or RPM), Boost vs RPM, Boost vs Speed, Launch control. Boost launch builder, Over-boost safeties, Boost scramble
- Traction Control - Power reduction via timing, nitrous percentage or boost (Requires Davis Technologies Holley Module)
- "Quick Start" fueling for all engines
- Option for VE based fueling strategy
- Fuel Map and Learn Function Smoothing
- Configurable User Password Protection
- Fully Configurable lap top Gauge Panel

HOLLEY EFI FUEL SYSTEM KIT

Holley EFI fuel kits provide everything needed for a complete supply fuel system for the Terminator EFI. The following items are included:

- Billet Fuel Pump P/N 12-600 65 GPH
- Billet Regulator P/N 12-846 Adjustable from 40-70psi with manifold reference
- Billet Filters P/N's 162-550 (100 GPH 10 Micron) and 162-551 (100 GPH 100 Micron)
- Earl's Pro-Lite 350 Black Hose P/N 350006ERL, 20 ft. of -6 hose Swivel-Seal™ Hose Ends H0526-2

HOLLEY ADJUSTABLE EFI BOOST REGULATOR

- Adjustable from 20-75 psi + boost reference
- Supplies increasing fuel ratios in respect to boost produced by turbos and superchargers
- Designed to supply additional fuel for aftermarket turbo and supercharger applications
- 6-an fittings included
- Engineered to regulate extreme flow volumes generated by racing fuel systems
- Precision CNC machined 6061 T6 billet aluminium for durability

HOLLEY DOMINATOR EFI ECU

Dominator EFI Vehicle Management Systems are intended for all engine applications, from street to unlimited high-end racing applications. In addition to the transmission control, drive by wire, and dual wideband oxygen sensor options, Dominator systems have nearly unlimited capabilities to control any power adder, input, or output you can throw at them. Need to run a turbocharged, nitrous injected 8 cylinder running water-methanol injection? No problem with Dominator EFI. How about control a 4L60E transmission as well as the fuel and spark on your street rod? No problem. There are also enough inputs and outputs to allow the Dominator® VMSs to serve as their own data acquisition and control module. The Dominator® VMS will eliminate the need for additional controllers as they are all contained in this one unit. The only thing limiting the Dominator Vehicle Management System is your imagination!

HOLLEY HP EFI ECU

Looking for a plug and play alternative for your stock or built late model factory EFI engine? How about a replacement ECU for your older Holley C950? Holley has you covered. HP EFI ECU and harness kits are designed to be used with popular factory EFI engines as an alternative to the factory ECU and harness or as a replacement for your C950 ECU. The HP allows you to accurately control the fuel and ignition of your engine along with additional controls for nitrous, boost or water meth.

GPS DIGITAL DASH

USB MODULE

Have you been searching for a reason to discard your old noisy mechanical speedometer cable? If so, the Holley GPS Module for our 7" Digital displays should be the next addition to your project vehicle. Featuring a simple plug and play installation, this GPS Module will allow you to display vehicle speed on your digital dash, without needing any external sensor information.

- USB connection for user friendly plug and play installations
- The 46" USB cable ensures you will be able to install the GPS Module virtually anywhere on the dash.
- Magnetic base provides for multiple mounting solutions
- 10Hz Refresh rate for ultra-accurate real time speedometer output
- Requires clear line of sight with the sky for satellite acquisition
- Can only be used with 553-106 or 553-109 (comes supplied with 553-109)

H0554-140

FiTech Fuel Injection

GO EFI

FUEL INJECTION

SYSTEM - 400HP

The Game Changer has arrived from FiTech with its latest addition to the line of Go EFI Throttle Body EFI systems. FiTech recognizes that not everyone needs or has 600HP or a wild camshaft. There is a large group of enthusiasts who are happy with their Z24 crate engine or their '66 Mustang's factory engine, but still want the advantage that EFI has to deliver. FiTech has taken your needs into consideration and built an EFI designed just for that purpose. The Go Street EFI is a ready-to-run system that strays away from the programmable features and sticks to the basic functions necessary to get the best performance and economy out of your street and mild performance engine. FiTech once again allows you to ditch that old carburettor and advance into the EFI world at the most affordable price on the planet! Leave it to the experts in affordable EFI, we are always looking for ways to save our customers money while delivering the BEST performance possible!

FH30003

Natural Aluminium Finish

GO EFI 4 FUEL INJECTION

SYSTEM - 600HP

The Go EFI 4 Self Tuning Fuel Injection is rated at 600 HP but is suitable for engines from 250 HP thru 600 HP. This system is perfect for your everyday Driver right up to your weekend Street Machine or Bracket Racer. It features the FASTEST most accurate Self Learning available, Timing control, Wet flow Annular discharge and tons of additional features. It fits any 4-bbl intake manifold and is the most self-contained and full-featured unit of this type. The ECU (computer) is mounted on the throttle body, which greatly simplifies installation. No hole in your firewall and no unsightly harness draped across your engine. This is also the only computer mounted throttle body that offers spark control without the need for an external spark box or special distributor. It also has a built-in fuel pressure regulator. A hand-held controller features a touch screen for quick and easy initial set-up. Note that this EFI system can also be used with an engine compartment mounted Fuel Command Center, which provides a returnless system. See Command Center details in the description below.

FH30001

GO EFI

FUEL INJECTION

FORCED INDUCTION

SYSTEM - 600HP

The Go EFI Power Adder 600HP Kit is for the enthusiast that demands more from his system or is planning a future upgrade! This system is capable of 25 lbs of Boost right out of the box and can be used in a blow thru turbo or blower application or on a single roots style supercharger. You can also run a single stage of Wet Nitrous and control your A/F as well as Ignition timing. Has all of the self-tuning features you expect from the Go EFI systems with the extra PRO Features needed for higher output engines. Annular Swirl Discharge fuel distribution as well as Nitrous and Boost timing retard features make this a perfect choice for your Power Adder engine or your normally aspirated engine if you are considering future upgrades.

FH30004

Matte Black Finish

MEANSTREET EFI FUEL INJECTION SYSTEM - 800HP

FiTech EFI is proud to announce its street line up self-tuning EFI systems. The line-up brings the new MeanStreet 800HP 8 injector kit to the forefront. Never has so much power been placed in one compact package. MeanStreet offers an on board ECU and fuel pressure regulator to bring the user simple, clean wiring and an easy install. The FiTech wideband O2 and Annular Swirl Wet Flow technology to get the most complete atomization available, bringing the user more power than ever. Using FiTech's proprietary self-tuning technology, you can get your car on the road or track faster than ever, using just your gas pedal and the included handheld controller to make it all happen. MeanStreet EFI fits any 4 barrel intake manifold, and is the most self-contained, cost effective unit on the market. It fits any 4-bbl intake manifold and is the most self-contained and full-featured unit of this type. The ECU (computer) is mounted on the throttle body, which greatly simplifies installation. No hole in your firewall and no unsightly harness draped across your engine. It also has a built-in fuel pressure regulator. A hand-held controller features a touch screen for quick and easy initial set-up.

FH30008 Matte Black Finish

GO EFI TRI-POWER 600HP SYSTEM

Nothing says muscle like a 6-pack screaming at you when you open the hood, showing off a trio of two-barrels. Keep the muscle car look while upgrading to modern day EFI technology! Check out the new Go EFI Tri-Power 600hp system. No special manifold needed for the retro-style 3x2 Go EFI system that will bolt onto most 6-pack manifolds and are compatible with factory air intake systems. Powered by the well-known self-learning technology from FiTech using three relatively simple two-barrel throttle bodies that actually perform while getting drivability and reliability. Requiring minimum effort to install while at the same time designed to maximize airflow and inlet velocity. This is a ready-to-run system that strays away from the programmable features and sticks to the basic functions necessary your street or mild performance engine needs. Each kit comes with three high-flow aluminium throttle bodies in a classic carburetor gold finish, external ECU (computer), Bosch wide band O2 sensor while all other sensors are easily replacement GM style parts. Adding EFI is a great way to boost economy, while not sacrificing performance. FiTech once again allows you to ditch that old carburettor and advance into the EFI world at the most affordable price on the planet!

FH39610 Gold Finish

GO EFI 8 FORCED INDUCTION SYSTEM - 1200HP

The Go EFI 8 1200 HP (Power Adder Plus) is the Ultimate system for the serious power builder. This system features 8 High Flow injectors and is capable of fueling 1200 HP! The Go EFI 8 1200HP is our TOP OF THE LINE system and comes with all of the Data-logging, and Pro-tuning software as standard features. PLUS The Annular Discharge design is increased to 20 jet streams to handle the monster flow of this unit! This system is capable of 25 lbs of Boost right out of the box and can be used in a blow thru turbo or blower applications or on a single roots style supercharger. You can also run a single stage of Wet Nitrous and control your A/F as well as Ignition timing. This kit is suitable for higher horsepower engines while equally at home on your daily driver.

FH30012 Matte Black Finish

GO EFI CLASSIC 650HP SYSTEM

FiTech Fuel Injection introduces the all new Go EFI Classic in the classic carburettor gold finish. FiTech EFI is now reverting back to the old school classic look while maintaining its innovative award winning patented design. This revolutionary fuel injection system allows you to maintain the classic carburettor look while eliminating cold start issues, hesitation, vapour lock and flooding. This innovative classic design hides the injectors and has an externally mounted ECU so it can be mounted wherever you want to ensure a true carburettor look is maintained. The Go EFI Classic is a self-tuning fuel injection system rated for up to 650hp. The more you drive the more it adapts to your personal style. So it is perfect for your everyday driver, your weekend Street Machine, or you're Bracket Racer.

FH30020 Gold Finish

EASY STREET 600HP SYSTEM

FiTech Fuel Injection is rounding out the street line with the all new Easy Street 600hp system. The street series includes the 150-400hp Go Street and the 200-800hp Mean Street, now we're adding the 250-600hp Easy Street system! Pre-programmed with bolt-n-go technology for out of the box performance with minimal input required. Easy tach input, reads tach signal from COIL, HEI, CDI, and many other ignition brands (No timing control). For non boosted engines naturally aspirated applications only.

FH30005 Gold Finish

RETRO LS

650HP SYSTEM

FiTech Fuel Injection introduces the Retro LS! Have you been hesitant on switching to EFI because you like the traditional look of a carburettor? Do you have a GM 4L60/80E Transmission in your hotrod? There is no more need to worry! FiTech's Retro LS EFI 650hp fuel injection systems offer a "golden" opportunity for impressive looks and performance. These classic gold engine-toppers with transmission control are complete throttle body kits, suitable for everything from your junkyard 5.3 to a Stroker 427—and they deliver old-school carburettor looks with EFI technology and reliability. Whether a do-it-yourself hot rodder or professional EFI tuner, the features of the FiTech Retro LS EFI 650hp system are sure to inspire you. Now you can have all of the benefits of EFI yet, maintain the traditional looks of a carburettor. This system is ready to go with the needed wiring harness and sensors to get you on the road easily and faster than any system on the market today. Our system is easy to install, no computer experience required, a tight fit regulator and a hand-held tuner is included.

FH37001 Gold Finish

GO EFI 2X4 DUAL QUAD FORCED INDUCTION SYSTEM - 1200 HP

This Kit is for the guys who have 671 and 871 Roots Superchargers or make up to 1200 HP naturally aspirated on their Dual Quad setup. FiTech EFI Has made it simple with their Go EFI 2X4 POWER ADDER 1200HP self-tuning System. Works out of the box on your 2X4 Blower Plate as an inline setup or can be side mounted using custom linkages. ALSO, this kit is a bolt on for the most popular N/A dual quad and tunnel ram manifolds including the Edelbrock line of dual quad manifolds WITHOUT any adapters! They fit and look like they belong there because they were designed to fit from the start. One Throttle Body handles all of the brains while the second holds 4 additional injectors plus the IAC motor for idle stability. These can also be used in cross ram and tunnel ram configurations. **This kit does not include linkage or fuel lines**. Boost A/F targets are simple to adjust while timing curves can be retarded according to boost easily through your touch screen controller. This system makes tuning your Supercharged engine easy! Bolt on 2 of these tough looking throttle bodies and drive your car as the system dials itself into the perfect calibration for all of your driving and weather conditions. If you decide you want to tune for more power or economy, the FiTech Touch Screen controller allows quick and easy On The Fly adjustments at your fingertips!

FH30064 Matte Black Finish

GO EFI 2 BARREL 400HP SYSTEM

Introducing the all new Go EFI 2 Barrel system for your 4, 6 and most 8 cylinder vehicles. Are you ready to put an end to cold start issues, hesitations, vapor lock, and flooding? Well then FiTech Fuel Injection 2 barrel system is offering you a "golden" opportunity for impressive looks and performance. These classic gold engine-toppers with transmission control are complete throttle body kits, delivering an old-school carburettor look with EFI technology and reliability. Upgrade to the FiTech EFI 2 Barrel System and get the tactical accuracy of EFI today! If you are restoring your weekend cruiser and want to upgrade to the most innovative EFI technology, then this is the Go EFI system you've been looking for! This system will give you the EFI technology you need and will be perfect for your moderate horse power project car. This ready-to-run system has all of the basic functions necessary to get the best performance and economy out of your street and mild performance engine. FiTech once again allows you to ditch that old carburettor and advance into the EFI world at the most affordable price on the planet!

FH39001 Gold Finish

ULTIMATE EFI LS SERIES INTAKE MANIFOLD KIT

Complete Self Tuning Induction Systems for LS engines designed for the do-it-yourself Hot Rodder to the professional EFI tuner! This system is ready to go with everything needed to complete the induction system of your LS engine and get you on the road easily and faster than any system on the market today. Forget sourcing mismatched parts and cutting and splicing old harnesses and re-flashed ECU's from "Craig's List" tuners. FiTech's Ultimate EFI is a complete Kit. Suitable for that junkyard 5.3 to a stroker 427, we have you covered! Check out the list of features inside this brochure and you will wonder why it's never been so simple to ditch that old factory hardware or top off that fresh long block. We have taken the work out of getting your new or pull-out LS up and running in a flash. That's why we call this kit the ULTIMATE EFI.

FH70001 LS1-LS2-LS6 Intake kit & ECU Without Transmission Control - 500HP

FH70002 LS1-LS2-LS6 Intake kit & ECU With Transmission Control - 500HP

FH70004 LS1-LS2-LS6 Intake kit & ECU With Transmission Control - 750 HP

FH70014 LS3-L92 Intake kit & ECU With Transmission Control - 750 HP

GO EFI 2X4 DUAL QUAD NORMALLY ASPIRATED EFI SYSTEM - 625 HP

Dual Quad! EFI! Nothing says Muscle like 2 big 4 BBL's on a V8. FiTech EFI has made it simple with their Go EFI 2X4 625 HP self-tuning System. This kit is a bolt on for the most popular manifolds including the Edelbrock line of dual quad manifolds WITHOUT any adapters! They fit and look like they belong there because they were designed to fit from the start. Our normally aspirated kits are good thru 625 hp but our Go EFI 2X4 POWER ADDER kit can handle you guys with the bigger cubes and Roots Superchargers. One Throttle Body handles all of the brains while the second holds 4 additional injectors, and the IAC motor for idle stability. These can also be used in cross ram and tunnel ram configurations. No boost with these please! For Boosted and High HP normally aspirated applications please see our Go EFI 2X4 POWER ADDER (Part #30064). **This kit does not include linkage or fuel lines**. Bolt on 2 of these tough looking throttle bodies and drive your car as the system dials itself into the perfect calibration for all of your driving and weather conditions. If you decide you want to tune for more power or economy, the FiTech Touch Screen controller allows quick and easy on the fly adjustments at your fingertips!

FH30062 Matte Black Finish

HYPERFUEL SINGLE PUMP G-SURGE TANK WITH RETURN - 800HP

The HyperFuel Single Pump G-Surge Tank is designed to be used in vehicles that have fuel starvation issues when being used in extreme lateral G-force environments. Typically, this is due to poor fuel tank baffling in the existing fuel tank. The G-Surge eliminates that problem. The pump in the G-Surge never gets uncovered because it receives a steady supply of fuel from your existing fuel system as well as the fuel returning from the fuel injection system. So your system maintains a constant flow of fuel. Since the G-surge is constantly circulating fuel to and from your tank, your fuel pump stays cooler and will have a longer life. The fuel pump noise is also muffled by being submerged in fuel 100% of the time. The G-surge is also the best way to provide the necessary increase in fuel volume when adding a power adder, such as boost or nitrous to your engine.

FH40007

THROTTLE RETURN SPRING KIT

This kit includes a bracket that bolts to the throttle body and provides a throttle return spring. Note that this kit only fits the FiTech 4-BBL throttle bodies.
FH60011

ULTIMATE LS STANDALONE ECU KIT

A self learning dual wideband Ultimate LS standalone ECU. With Transmission Control. Includes Touch Screen controller for easy setup and configuration.

- With Or Without Transmission Control
- Self learning ECU with Touch Screen controller for easy setup and configuration.
- Windshield Mount for control.
- Bosch wide band controlled (Self learning).
- Stainless Oxygen Sensor bung (clamp or weld on).
- Tach Output Driver for most tachometers (5V).
- Speedometer Output Driver for most speedometers.
- Custom wire harness (uses factory coil pack sub harness).
- Programmable Colour touch screen Hand Held Controller with data log features

THROTTLE BODIES

AF64-2136

AF64-2135

ELECTRONIC THROTTLE BODIES

The Bosch Motorsport drive-by-wire (DBW) electronic throttle bodies are designed to control the fresh air delivery into the engine electronically replacing the mechanical linkage from the accelerator pedal. This DBW setup will require three things to make it work:

- An accelerator pedal module AF64-2137 (Sold Separately 0 280 755 051)
- A throttle valve that can be opened and closed by an electric motor (DBW)
- A powertrain or engine control module (PCM or ECM) either factory or aftermarket

The DBW will work with all applications with flex-fuels, CNG and LPG if they are injected in the air stream after the throttle body. The DBW is great for custom applications when a large throttle body is required with both 74mm (2-29/32") and 82mm (3-7/32") versions available for to suit various engine capacities.

- * Opening direction is counter clockwise
- * Two redundant sensors control the throttle position
- * DBW electronic throttle bodies have an idle air position
- * Temperature range is -40oC to 140oC (-40oF to 284oF)
- * Can be connected directly to PCM/ECM units with ETC functionality

- * Supply voltage is 6 to 16 V
- * Output signal I: 0 to 5 V for 0 to 90 degrees
- * Output signal II: 5 to 0 V for 0 to 90 degrees

BOSCH DBW ADAPTERS

These handy adapters bolt to front of the popular Bosch 74mm and 82mm Electronic Throttle Body (AF64-2135, AF64-2136) and allows an AeroFlow intercooler clamp (sold separately) to be used. The internal bore of the adapter has been designed to ensure a smooth transition to the throttle body for maximum flow. Machined from billet 6061-T6 aluminium and anodized in a black finish. They are also offered in a weld-on configuration (raw finish) to weld onto the front of your intake manifold.

AF64-2138 suits 74mm Bosch DBW and 3" intercooler clamp

AF64-2139 suits 82mm Bosch DBW and 3-1/2" intercooler clamp

AF64-2145 suits 74mm Bosch DBW Raw WELD ON

AF64-2146 suits 82mm Bosch DBW Raw WELD ON

BILLET 4 BARREL THROTTLE BODIES

AeroFlow's throttle bodies are a true billet construction. The 1375CFM throttle bodies utilize dual pattern flange (4150 & 4500) and includes the idle air control valve (IAC) and throttle position sensor (TPS).

The 1" bore is designed with a special radius which promotes maximum air flow and minimum turbulence.

Flange	Aluminium	Black
4150/4500	AF64-2250	AF64-2250BLK
AF59-2172	Replacement TPS adapter	

CAST 4 BARREL THROTTLE BODIES

The AeroFlow Performance 4-barrel throttle body is the perfect complement for your fuel injection system. This high-quality diecast finished component is an affordably priced option compared to our billet version. This 1000 CFM throttle body utilizes 4150 pattern flange to suit a variety of intake manifold with 4150-style square-bore carburetor flange and standard bolt spacing. The 44.45mm (1-3/4") bore is designed with a special radius which promotes maximum air flow and minimum turbulence. 6.3mm (1/4") thread in center for air filter stud.

This throttle body will accept a standard air cleaner with a 5-1/8" flange and includes a GM style idle air control (IAC) motor with a GM style throttle position sensor (TPS) and GM LS3 style MAP sensor. Multiple vacuum ports are also provided on the throttle body (2x 3/8", 2 x 1/4" x 3/16")

THROTTLE BODY ADAPTERS

Part No	Description
AF64-2087	Weld flange suit LS 90mm AF64-2069
AF64-2088	Adapts AF64-2069 to early 3 bolt LS manifolds.

95mm THROTTLE BODY ADAPTER

This handy adapter bolts to front of the AeroFlow Performance 95mm cable throttle body (AF64-2072/AF64-2072BLK) and allows a 4" AeroFlow intercooler clamp (sold separately) to be used. The internal bore of the adapter has been designed to ensure a smooth transition to the throttle body for maximum flow. Machined from billet 6061-T6 aluminium and anodized in a silver finish. Includes all bolts and O-rings for installation and a complete positive seal.

AF64-2272	Silver
AF64-2272BLK	Black

GM LS THROTTLE CABLE BRACKET

This AeroFlow Performance throttle body bracket is ideal for allowing an easy install of the OE throttle cable to the throttle body. Designed to suit aftermarket 90mm, 95mm and 105mm 4 bolt throttle bodies sold separately. This Bracket has allowance for throttle pedal adjustment and / or the addition of a nitrous plate.

AF64-2172	Suits 90mm and 95mm
AF64-2174	Suits 105mm

GM LS 102mm THROTTLE BODY ADAPTER

This handy two-piece adapter bolts to front of the AeroFlow Performance GM LS 102mm fly by wire throttle body (AF64-2134/AF64-2134BLK) and allows a 4" AeroFlow intercooler clamp (sold separately) to be used. The internal bore of the adapter has been designed to ensure a smooth transition to the throttle body for maximum flow. Machined from billet 6061-T6 aluminium and anodized in a silver finish. Includes all bolts and O-rings for installation and a complete positive seal.

AF64-2144	Silver
AF64-2144BLK	Black

Competition Throttle Bodies UNIVERSAL 4-BARREL THROTTLE BODIES

These progressive 4-barrel throttle bodies bolt directly to standard square-bore or 4500 Series carb mount flanges for competition electronic fuel injection systems based on our Victor Series manifolds (see EFI Manifolds). Fully machined by Edelbrock, they are assembled/calibrated by Magneti Marelli USA and include a GM style throttle position sensor (TPS), #3878, #3879, and #3888 include a Delphi/GM idle air control (IAC) motor. #38783, #38793 and #38883 include a Hitachi Linear IAC motor and must be used with our ECU systems on the Pro-Tuner EFI Application Chart. Standard style air cleaners (5-1/8" or 4500 series) will fit. Available in standard finish or black powder-coated finish for a great look with performance to match.

Universal 4-Barrel Throttle Bodies with Delphi/GM IAC (STANDARD FINISH)

For Standard Square-Bore Carb Mount Flange w/ Standard Finish (1.75" throttle bores, 1000 cfm) **ED3878 N/A**
For 4500 Series Carb Mount Flange w/ Standard Finish (2" throttle bores, 1600 cfm) **ED3879 ED3862**
For 4500 Series Carb Mount Flange w/ Standard Finish (2.25" throttle bores, 2000 cfm) **ED3888 ED3863**

VICTOR LS SERIES THROTTLE BODIES

Designed for modified Gen II-IV engines, the Victor LS Series 90mm throttle body increases flow and horsepower in high-performance street or competition applications. This new throttle body includes a LS1 stock-style TPS, IAC and PCV port. Extra idle control is provided with the addition of an idle bleed screw. It has an LS1/LS2 flange that can be mounted on aftermarket LS1 manifolds with a 90mm opening as well as LS2/LS7 factory manifolds. It does not retain the lower water tube or the stock throttle cable setup and is perfect for enthusiasts who want to use an LS2 or LS7 in an older vehicle with no fly by wire throttle.

ED3864 90mm Throttle Body
ED38643 90mm Throttle Body BLACK

PRO-FLO XT THROTTLE BODIES

These 90mm single bore throttle bodies are designed specifically for use with our Pro-Flo XT EFI manifolds and Victor EFI intake elbows. They are ideal for high performance street, race and custom EFI system installations. Available for Small-Block Chevy and Ford applications in as-cast or black powder coat finish. Throttle body #3869 and #38693 have provisions for either LS1 or LS2 mounting bolt patterns. They use a LS1 style TPS, IAC and PCV ports. They have been designed with the addition of an idle bleed screw to offer better idle control than other 90mm throttle bodies on the market. The bleed screw can be used to create a base amount of idle air flow instead of throttle tip-in, leaving the TPS signal unaffected.

90mm Pro-Flo XT Throttle Body for Small-Block Chevy **As-Cast Black**
ED3869 ED38693

Throttle body #3818 and #38183 include progressive throttle cable, lever, Throttle Position Sensor and a Ford 5.0L mounting bolt pattern. They are also machined with a pad to accept Ford IAC control and will also work with pulse-width IAC applications as well. Solenoid and IAC sold separately, will include a block off plate.

90mm Pro-Flo XT Throttle Body for Small-Block Ford **As-Cast Black**
ED3818 ED38183

FORD TPS (FOR WM THROTTLE BODIES)

This throttle position sensor, or TPS, is made for use with Wilson Manifolds throttle bodies. You can get it with either the EFI connector (compatible with Holley EFI, FiTech, etc) or a Ford connector (compatible with Ford 86-93 OEM ECUs). **WI488201**

FAST 4 BARREL THROTTLE BODIES

Description
4150 Style 4 Barrel, 1375 CFM - Black **Part No. FAST307603B**
4500 Style 4 Barrel, 2000CFM - Polished **FAST307604P**

Holley

UNIVERSAL 4BBL 1000CFM 4150 FLANGE THROTTLE BODY

Holley's new 1000 CFM Throttle Body shares the same air entry area design that powers every NASCAR Sprint Cup Series car! The throttle body features integrated throttle position, idle air control and intake air temperature sensors, Ford and GM transmission kick down levers as well as all necessary vacuum ports.

- Standard square bore mounting pattern for installation on many intake manifolds
- Flows 1000 CFM to handle high horsepower engines
- Exclusive CFD computer modelled air entry area delivers maximum velocity and accelerated air speed
- Integrated TPS, IAC, and Air Temperature Sensor
- Hi Flow IAC passages for large cubic inch engines for idle stability
- Ford Transmission Kick Down Lever for use with Ford automatic transmissions
- Integrated GM 700R4 transmission kick down location no adapters needed
- All necessary vacuum ports (1) timed spark, (2) 3/8" and (2) 3/16" full manifold vacuum ports
- 1.75" throttle plates mounted to PTFE coated throttle shafts for high flow and a smooth feel
- High quality die cast aluminium for strength and weight reduction
- Tumble polished finish

1000 CFM 4150 Flange H0112-588

SNIPER EFI THROTTLE BODY

Sniper EFI's new 92mm and 102mm billet aluminium LS throttle bodies give you a great way to improve engine performance without breaking the bank. Don't let the low price fool you, these are feature packed throttle bodies available in both bright silver or black anodized finishes. The enlarged bore sizes allow for increased airflow to support your higher horsepower needs, a progressive throttle pulley enhances low speed drivability and a double return spring provides solid and secure throttle control feel.

- Cable operated throttle body available in 92mm or 102mm openings
- Enlarged bore allows increased airflow to support higher horsepower requirements
- Works great with Sniper EFI intake manifolds
- High quality billet aluminium construction
- Choice of bright silver or black anodized finish
- Laser engraved Sniper EFI logo
- Progressive throttle pulley and double return spring
- Adjustable throttle stop
- 4-bolt style mounting pattern, bolts included

102MM Throttle Body LS Engine, Black H0860005

SNIPER THROTTLE CABLE BRACKET

Aeroflow throttle cable mounting bracket is specifically designed for the Holley Sniper EFI unit. It is a direct bolt on option that allows you to mount up and attach our universal throttle cable (other branded throttle cables may also work). Machined from 6061-T6 billet aluminium they are available in silver or black anodized finishes. Return springs are included in this kit along with mounting hardware.

AF64-2173 Silver Finish
AF64-2173BLK Black Finish

HOLLEY BILLET 95mm & 105MM

LS THROTTLE BODY

Holley's BILLET LS Throttle Bodies are the BIGGEST BORE - MOST FEATURE LOADED available. Holley went back to the drawing board and built the ultimate air valve for your LS engine! This all new design boasts either a 95mm or 105 millimeter bore and a low RPM drive friendly taper. Innovative features like Idle Bleed Adjustment, TPS CLOCKER, and closable PCV Passage Valve, make them the ultimate throttle bodies for ease of installation and tuning. Regardless of whether you have a turbo, supercharger, or a big cam engine sucking gulps of air, Holley's throttle bodies are maximized for your application. The barrier protection of the BLACK ANODIZED finish also offers up a modern tech look!

105mm Throttle Body With Low Rpm Taper H0112-581
105mm Throttle Body With Straight Bore H0112-583
95mm Throttle Body With Low Rpm Taper H0112-585

AF64-2134BLK BLACK 102mm (4")

Note: Fly by wire plug & pins SOLD SEPARATELY AF49-2134

Big Mouth LSX Throttle Bodies

The FAST Big Mouth Throttle Bodies for the FAST LSX 92mm & LSXR 102mm Intake Manifolds increase airflow through a series of innovative design changes and a slightly enlarged throttle opening. FAST also invested significant testing & engineering resources into optimizing cross-sectional flow and eliminating airflow turbulence, especially at part throttle operation. The FAST Big Mouth 92mm Throttle Body will deliver bolt on GM Gen III (LS1, LS2 & LS6) horsepower while the LSXR is designed to maximize potential performance upgrades on L92/LS3/LS7 engines.

Description
Big Mouth 92mm Throttle Body **Part No. FAST54092**
Big Mouth 92mm Throttle Body w/ TPS (No IAC) **FAST54095**
Big Mouth 102mm Throttle Body **FAST54102**
Big Mouth 102mm Throttle Body w/ TPS **FAST54103**
Throttle Position Sensor **FAST54020**
102mm Big Mouth Throttle Body Without TPS or IAC - Black **FAST54106**
102mm Big Mouth Throttle Body With TPS & IAC - Black **FAST54107**

COMPLETE 4150 THROTTLE BODY ASSEMBLY

FAST™ 4 Barrel Throttle Bodies incorporate tapered and radiused throttle bores and precisely machined progressive linkage for smooth throttle operation and unparalleled airflow. More airflow equals more horsepower. •Includes all as PN 304149 (Air Only Throttle Body Assembly) •Includes 4 X 85 lb. High-Impedance FAST™ fuel injectors (PN 30857) •Includes required Billet fuel rail and crossover line (-6AN Feed) •Includes GM map sensor (PN 307029) • Inward opening throttle blades eliminate part throttle directional influence by the blades that can cause poor air distribution • Shorter height for better airflow, easier packaging for tight hood clearance and reduced weight

• Throttle blades control vibration & reduce thermal expansion
• Throttle blades attached to stainless steel shafts w/ aircraft quality hardware and peened to assure positive retention
• Bodies are machined from 6061-T6 billet aluminium for consistent quality, excellent appearance and light weight **FAST304152**

FAST 4 Barrel Throttle Bodies

FAST 4 Barrel Throttle Bodies incorporate tapered and radiused throttle bores and precisely machined progressive linkage for smooth throttle operation and unparalleled airflow. They feature inward opening brass throttle blades attached to stainless steel shafts with aircraft quality hardware and peened to assure positive retention. Bodies are machined from 6061-T6 billet aluminium for consistent quality, excellent appearance and light weight. The 4150 style throttle bodies include TPS, IAC & Fasteners and the 4500 style includes TPS.

Description
4150 Style 4 Barrel, 1375 CFM - Red **Part No. FAST307603**
4150 Style 4 Barrel, 1375 CFM - Polished **FAST307603P**

GM STYLE IAC

GM Style IAC (Idle Air Control) - Can be used on 4BBL style throttle bodies and on single bore with adapter housing WI485002

IAC BLOCK-OFF PLATE

Many of our single bore throttle bodies (and other Ford style throttle bodies) utilize an IAC provision. If your setup doesn't require an IAC, you can use this block-off plate on your throttle body to plug the holes. Utilizes billet construction for durability. WI481002

EFI INTAKE ELBOWS

HIGH FLOW ELBOWS

Wilson Manifolds lightweight 100-degree elbows provide the most efficient method of adapting our high flow single bore throttle bodies to 4-barrel style intake manifolds. This allows the use of a high performance intake manifold with a large diameter single bore fuel injection throttle body. Commonly used for turbo & blower applications. Available for 90mm or 105mm throttle bodies mated with 4150 or 4500 series manifolds.

60-90mm Throttle Body to 4150 Manifold WI461101
60-90mm Throttle Body to 4500 Manifold WI461201

90-105mm Throttle Body to 4500 Manifold WI462201

THROTTLE BODY

INTAKE ELBOWS DESIGNED FOR LS SERIES AND 5.0L THROTTLE BODIES

Edelbrock Throttle Body Elbows are the best way to adapt LS1, LS2 and Ford 5.0L-based throttle bodies to EFI manifolds with traditional square-bore mounting pads. An internal divider optimizes flow quantity and distribution into the manifold and they can be mounted forward, backward, or sideways on Victor EFI square-bore manifolds. Three versions allow EFI tuners to position the throttle body low for hood clearance or higher for maximum airflow.

Ultra Low Profile Elbow ED3847 is designed to fit our Victor Jr. LS1 EFI manifold ED29085 and is ideal for tight engine compartments. The throttle bore center sits 9.00" forward and only 0.56" up from the manifold mounting flange. Includes throttle body adapter plate ED2737 for use with LS1 throttle bodies. We recommend Edelbrock 90mm throttle body #3869 for optimum performance.

Ultra Low Profile Intake Elbow (up to 90mm Throttle Body to Square-Bore Flange) ED3847
With black powder coated finish ED38473

Low Profile Intake Elbow (up to 90mm Throttle Body to Square-Bore Flange) ED3848
black powder coated finish ED38483

High Flow Intake Elbow (up to 95mm Throttle Body to Square-Bore Flange) ED3849
black powder coated finish ED38493

CAST CARBURETTOR EFI HAT

Aeroflow Performance cast carburettor hats are the perfect solution for any blow through installation. These EFI carb hats have a contoured design which promotes optimal airflow, while providing excellent hood clearance (100mm) with a 5-1/8" (4150) air cleaner flange. These hats feature a 1/8" NPT reference port that can be used as a convenient hook-up for boost reference or carburetted fuel pressure regulators. The inlet is designed for a 3.5" silicone coupler, with a sealing lip to ensure a leak free installation. The air cleaner stud entry can be drilled to 5/16" for installations with larger air cleaner studs. Air cleaner gasket, stud, washer, nut and 1/8" NPT plug is included.

AF2045-1000 Cast Carb Hat to suit 4150 Natural Cast Finish

EFI FUEL RAILS

LSX High Flow Billet Fuel Rails

The FAST High Flow Billet Fuel Rails feature a larger internal diameter that dampens the pulses and provides increased fuel volume, ensuring that your injectors never run dry. In addition, they yield better fuel distribution and ultimately greater horsepower. Featuring high strength billet, lightweight, red anodized aluminium construction, FAST LS1 fuel rails deliver performance in addition to a show car quality appearance. The FAST fuel rails are available in a component-matched kit, including black anodized #8 fittings and "super seal" o-rings or the fuel rails may be ordered without the hardware.

Description	Part No.
LS1 Fuel Rail Kit w/ Fittings & Hardware	FAST146035-KIT
LS2 Fuel Rail/Injector Adapter Kit	FAST54026

LSXR Fuel Rail Kit (Billet Style)

FAST146033-KIT
(For use with FAST LSXR 102mm intake manifold only. Designed for LS2 engines.)

FAST OE FUEL RAIL KIT, LSXR LS1/LS6 W/ RAIL

These FAST LSXR OEM fuel rail kits will help maintain optimum fuel flow to your EFI system. They are designed for use with the FAST 102mm intake manifolds and include all fittings and attachments for a direct bolt-on fit.

FAST146021-KIT

LSXR™ LS3/LS7 FUEL INJECTOR ADAPTER KIT

These FAST LSXR LS3/LS7 fuel injector spacers are designed to extend your short OEM fuel injectors to the same length as the longer-style injectors. These kits include spacers and O-rings.

FAST146025-KIT

LSXR™ OEM-TYPE LS3/LS7/L76/L99 FUEL RAIL KIT (NON-BILLET)

The FAST™ LSXR™/LSXR™/LSXR™ Fuel Rails feature a larger internal diameter that dampens the pulses and provides increased fuel volume, ensuring that your injectors never run dry. In addition, they yield better fuel distribution and ultimately greater horsepower. Featuring high strength, lightweight, red anodized aluminium construction (does not include Part #146020-KIT), FAST™ fuel rails deliver performance in addition to a show car quality appearance. The FAST™ fuel rails are available in a component matched kit, including black anodized #8 fittings and super seal o-rings.

AEROMOTIVE Fuel Systems

BILLET FUEL RAIL KITS

Aeromotive High Flow, Billet Fuel Rails combine 3,000 HP flow capabilities with "bolt-on" ease of installation. We offer application specific solutions for a variety of engines. Combining legendary fit and finish with maximum performance capability.

- Accepts -8 AN O-Ring Fittings
- Full 5/8" ID through bore, capable of supporting up to 3,000 HP.
- Compatible with -10 AN line when used with adapters.
- Full size ports at each end for optimal injector supply.
- Additional inlet/outlet ports are provided where required.
- CNC-machined, billet aluminium construction.
- Steel mounting brackets, custom engineered for each application.
- Red, Type II bright dip anodized finish.

AEROFLOW

GM LS FUEL RAIL

Give your GM LS engine the combability to flow some serious flow to feed even the most fuel hungry applications. These GM LS fuel rails from Aeroflow Performance feature specifically designed billet modular mounts. These modular mounts can easily be flipped and reinstalled into different threaded holes on the fuel rail itself allowing it to suit GM LS1, LS2, LS3, LS6, L76 and L99 engines.

Each fuel rail is precision CNC machined from extruded 6063 aluminium with a large internal diameter bore with -8ORB ports on each end, as well as one in the middle of each rail for sensors or an extra feed/return. Like the OEM fuel rails, the injector bores are 14mm ID so factory injectors are permitted. This kit is compatible with all fuel types including popular alcohol mixtures such as E85. Aeroflow fuel rails are double anodized and are available in Blue, Black, Red and Silver finishes.

NOTE:

LS1 will take full length and 3/4" length.

LS2/3 will take only short injectors.

GM LSA FUEL RAIL
Aeroflow Performance have developed new billet fuel rails for the GM LSA supercharged engine. It is a straight bolt on to use with 14mm (9/16") factory injectors or aftermarket injectors. These return style fuel rails feature larger -8orb dual inlets and dual outlets which have many benefits over the OEM dead end fuel rails which can cause hot start issues. Fuel rails are hard anodised and available in blue, black, red and polished finishes. This rail includes 8x-4ORB port plugs.
We recommend to use our slimline orb port fittings AF909-06-08 for -6AN line or AF909-08 for -8an line when installing these rails.

TOYOTA 2JZ
The Aeroflow Performance 2JZ fuel rail is designed to suit all Toyota 2JZ-GTE engines both the VVTi and non-VVTi models. Proper fuel delivery is arguably one of the most critical components for those looking to make all the power they can safely. The 2JZ OEM fuel rails are incredibly restrictive and impede the fuel delivery to the injectors under high fuel pressures. This is problematic for high power 2J engine builds where having consistent fuel pressure is absolutely necessary. Manufactured with a large 18mm internal bore, this fuel rail can support all necessary engine power requirements, especially with three -8ORB ports fitted along the fuel rail. The kit includes 2 different sets of mounting feet allowing various height fuel injectors to be used. Designed to suit 14mm fuel injectors and available in either black or silver anodized.
NOTE: will take full length fuel injectors

INJECTORS

FUEL INJECTORS

Genuine Bosch Motorsport fuel injectors with a variety of flow rates, physical sizes, and fuel compatibility ranging from pump 98 to E85, Methanol and popular race fuels. Each injector O-ring is compatible with ethano/alcohol fuels and pump 98 fuel. These injectors can be driven with the saturated drivers found in every OEM ECU and most aftermarket ECUs for ease of useability across the board.

The injectors are able to function at high fuel pressures and don't exhibit the high fuel pressure handling problems found with many other high flow high-impedance injectors. This allows you to use a larger injector than normally possible without hurting idle and low speed driveability. This makes these injectors very well suited to turbocharged and supercharged aftermarket or OEM applications. We also stock a full range of injector connector plug adapters enabling a quick and simple upgrade to almost any vehicle.

Note: These injectors have no filter screen installed. We recommend using an AeroFlow 10 micron fuel filter in the fuel line before the fuel rails to protect the injectors from debris.

495CC EV14 FUEL INJECTOR

- 495cc/min (44lb/hr) @ 3bar (43.5PSI)
- Spray Pattern: Single cone spray
- Dimensions: 33.6mm (1-5/16") O-ring seat to seat (Short body length)
- Overall Length: 50.3mm (1-63/64")
- Injector diameter: 14 mm (35/64")
- Regular tip nozzle - Voltage range is 8-15 Volts.
- Coil Resistance: 12 Ohms (High Impedance)
- Electrical Connector: USCAR connector (AF49-1523)
- E85 / Alcohol fuel compatible
- Fitted with Viton upper and lower O-rings
- Direct fit for LSA, L33 (GM- Part Number : 12598646) (BOSCH O 280 158 187)

Part No: AF49-1900

547CC EV14 FUEL INJECTOR

- 547cc/min (50lb/hr) @ 3bar (43.5PSI)
- Spray Pattern: Wide split dual cone spray
- Dimensions: 60.65mm (2-3/8") O-ring seat to seat (Full body length)
- Overall Length: 65.5mm (2-9/16")
- Injector diameter: 14mm (35/64")
- Regular tip nozzle - Voltage range is 8-15 Volts.
- Coil Resistance: 12 Ohms (High Impedance)
- Injector dead time: 0.73sec @ 3BAR (43.5PSI) @ 14 Volts
- Electrical Connector: USCAR connector (AF49-1523)
- E85 / Alcohol fuel compatible
- Fitted with Viton upper and lower O-rings
- Can be used as replacement for Ford Coyote engines, generic use or custom applications
BOSCH O 280 158 279

Part No: AF49-1901

547CC EV14 FUEL INJECTOR

- 547cc/min (50lb/hr) @ 3bar (43.5PSI)
- Spray Pattern: Wide split dual cone spray
- Dimensions: 48.5mm (1-29/32") O-ring seat to seat (Standard body length)
- Overall Length: 65.5mm (2-9/16")
- Injector diameter: 14mm (35/64")
- Regular tip nozzle - Voltage range is 8-15 Volts.
- Coil Resistance: 12 Ohms (High Impedance)
- Injector dead time: 0.73sec @ 3BAR (43.5PSI) @ 14 Volts
- Electrical Connector: USCAR connector (AF49-1523)
- E85 / Alcohol fuel compatible
- Fitted with Viton upper and lower O-rings
- Can be used as replacement for Ford Mustang 2006 to 2012, generic use or custom applications

Part No: AF49-1902

980CC EV14 FUEL INJECTOR

- 980cc/min (89lb/hr) @ 3bar (43.5PSI)
- 1100cc/min (105 Lb/hr) @ 4 bar (58PSI)
- Spray Pattern: Wide split dual cone spray
- Dimensions: 33.60mm (1-5/16") O-ring seat to seat (Short body length)
- Overall Length: 50.3mm (1-63/64")
- Injector diameter: 14mm (35/64")
- Extended tip nozzle
- Coil Resistance: 12 Ohms (High Impedance)
- Voltage range is 8-15 Volts.
- Injector dead time: 1.12sec @ 3BAR (43.5PSI) @ 14 Volts
- Electrical Connector: Jetronic / Bosch connector (AF49-1524)
- E85 / Alcohol fuel compatible
- Fitted with Viton upper and lower O-rings
- Can be used as replacements for Ford FG & FG X Turbo (with 12mm injector adaptor), generic use or custom applications.

Part No: AF49-1907

AEROFLOW FUEL INJECTORS

With these fuel injectors from AeroFlow Performance can now offer each customer a one stop shop for your entire fuel delivery system. We offer fuel injectors with a variety of flow rates, physical sizes, and fuel compatibility ranging from pump 98 to E85, Methanol and popular race fuels. We recommend after operating with alcohol-based fuels or when the vehicle is dormant, the fuel injectors be flushed to prolong the life of the injector which stops them from blocking up. Each injector O-ring is also compatible with ethanol/ alcohol fuels and pump 98 fuel. These injectors can be driven with the saturated drivers found in every OEM ECU and most aftermarket ECU's for ease of useability across the board. Each injector is flow matched in matching sets to within 1%. This allows ease of tune with a smooth idle which provides linear acceleration, great power and most important reliability. AeroFlow also stock a full range of injector connector plug adapters enabling a quick and simple upgrade to almost any vehicle.

621CC EV14 FUEL INJECTOR

- 621cc/min (56lb/hr) @ 3bar (43.5PSI)
- Spray Pattern: Wide split dual cone spray
- Dimensions: 48.5mm (1-29/32") O-ring seat to seat (Standard body length)
- Overall Length: 65.5mm (2-9-16")
- Injector diameter: 14mm (35/64")
- Regular tip nozzle - Voltage range is 8-15 Volts.
- Coil Resistance: 12 Ohms (High Impedance)
- Electrical Connector: USCAR connector (AF49-1523)
- E85 / Alcohol fuel compatible
- Fitted with Viton upper and lower O-rings
- Can be used as replacement for Ford Mustang GT 2013 to 2014, VW Golf Jetta Passat 01-05 1.8T, Audi A4 TT, generic use or custom applications

Part No: AF49-1903

1680CC EV14 CNG FUEL INJECTOR

- 1680cc/min (160lb/hr) @ 3bar (43.5PSI)
- 2000cc/min (195 Lb/hr) @ 4 bar (58PSI)
- CNG Gas fuel injector
- Spray Pattern: Single cone spray
- Dimensions: 60.65mm (2-3/8") O-ring seat to seat (Full body length)
- Overall Length: 65.5mm (2-9/16")
- Injector diameter: 14mm (35/64")
- Regular tip nozzle
- Coil Resistance: 9.1 ohms (High Impedance)
- Voltage range is 8-15 Volts.
- Injector dead time: 0.45sec @ 3BAR (43.5PSI) @ 14 Volts
- Electrical Connector: Jetronic / Bosch connector (AF49-1524)
- E85 / Alcohol fuel compatible
- Fitted with Viton upper and lower O-rings
- Commonly known as "Bosch Indy Blue"
- Can be used as replacements in LS1, Ford B-Series Turbo, EA-EL and any full length EV1/EV6 applications, generic use or custom applications.

Part No: AF49-1909

PLEASE REFER TO ELECTRICAL SECTION FOR PLUGS AND ADAPTERS

FUEL INJECTOR SERVICE KIT

The AeroFlow Performance fuel injector service kit contains the most common components required to rebuild most fuel injectors. All fuel injectors require quality service and repair components over the life of the injector to ensure the longevity of each one. This will ensure correct fuel flow through the each injector and for safety reasons the long term continuous sealing of fuel under pressure through a range of extreme temperatures and operating conditions. We recommend new seals be fitted whenever an injector is removed from its sealing surface. The renewal of any "buffer" rubbers is also required to ensure the correct seating and location of the injector. This kit contains buffer seals, body seals, filters, space washers, lower seals, as well as upper and lower O-rings. Each kit is available in Viton for regular 98 fuels and Buna material for E85 and alcohol fuels.

- AF98-2125 Viton material
- AF98-2126 Buna material

627CC EV14 FUEL INJECTOR WITH EXTENDED TIP

- 627cc/min (57lb/hr) @ 3bar (43.5PSI)
- Spray Pattern: Wide split dual 22 Degree cone spray
- Dimensions: 48.5mm (1-29/32") O-ring seat to seat (Standard body length)
- Overall Length: 65.5mm (2-9/16")
- Injector diameter: 14mm (35/64")
- Extended tip nozzle
- Coil Resistance: 12 Ohms (High Impedance)
- Voltage range is 8-15 Volts.
- Electrical Connector: Jetronic / Bosch connector (AF49-1524)
- E85 / Alcohol fuel compatible
- Fitted with Viton upper and lower O-rings
- Can be used as replacement for BMW S85, Mercedes AMG C63, Porsche 997 engines, generic use or custom applications.

Part No: AF49-1904

2200CC EV14 CNG FUEL INJECTOR

- 2200cc/min (160lb/hr) @ 3bar (43.5PSI)
- 2550cc/min (210 Lb/hr) @ 4 bar (58PSI)
- 2865cc/min (240 Lb/hr) @ 5.40 bar (78.5PSI)
- 3155cc/min (300 Lb/hr) @ 6 bar (88PSI)
- CNG Gas fuel injector
- Spray Pattern: Single cone spray
- Dimensions: 33.60mm (1-5/16") O-ring seat to seat (Short body length)
- Injector diameter: 14mm (35/64")
- Overall Length: 50.3mm (1-63/64")
- Short tip nozzle
- Coil Resistance: 9.1 ohms (High Impedance)
- Voltage range is 8-15 Volts.
- Injector dead time: 0.43sec @ 3BAR (43.5PSI) @ 14 Volts
- Electrical Connector: Sumitomo / Denso connector (AF49-1522)
- E85 / Alcohol fuel compatible
- Fitted with Viton upper and lower O-rings
- Can be used in generic use or custom applications

Part No: AF49-1910

2200CC EV14 CNG FUEL INJECTOR

- 2200cc/min (160lb/hr) @ 3bar (43.5PSI)
- 2550cc/min (210 Lb/hr) @ 4 bar (58PSI)

- Spray Pattern: Single cone spray
- Dimensions: 33.60mm (1-5/16") O-ring seat to seat (Short body length)
- Injector diameter: 14mm (35/64")
- Overall Length: 50.3mm (1-63/64")
- Short tip nozzle
- Coil Resistance: 9.1 ohms (High Impedance)
- Voltage range is 8-15 Volts.
- Injector dead time: 0.43sec @ 3BAR (43.5PSI) @ 14 Volts
- Electrical Connector: USCAR connector (AF49-1523)
- E85 / Alcohol fuel compatible
- Fitted with Viton upper and lower O-rings
- Can be used in generic use or custom applications

Part No: AF49-1911

Fuel injector clips

The AeroFlow injector retaining clips are used to help secure the fuel injector to the fuel rail or to the fuel injector adapters. After the injector is set into the fuel rail, this clip holds it in place, ensuring a proper seal on the O-ring and limiting movement. We recommend these to be replaced any time the injector is removed. NOTE: There must be the correct groove on the injector or the injector adapter for these to be fitted.

- AF64-2889-4 Packs of 4
- AF64-2889-1 Packs of 1

731CC EV14 FUEL INJECTOR

- 731cc/min (66lb/hr) @ 3bar (43.5PSI)
- Spray Pattern: Single 30 Degree cone spray
- Dimensions: 48.65mm (1-29/32") O-ring seat to seat (Standard body length)
- Overall Length: 65.5mm (2-9/16")
- Injector diameter: 14mm (35/64")
- Regular tip nozzle
- Coil Resistance: 12 Ohms (High Impedance)
- Voltage range is 8-15 Volts.
- Injector dead time: 0.77sec @ 3BAR (43.5PSI) @ 14 Volts
- Electrical Connector: Sumitomo / Denso connector (AF49-1522)
- E85 / Alcohol fuel compatible
- Fitted with Viton upper and lower O-rings
- Can be used as replacements for Audi (06H 906 031), VW (06H 906 031), generic use or custom applications

- 2550cc/min (210 Lb/hr) @ 4 bar (58PSI)
- 2865cc/min (240 Lb/hr) @ 5.40 bar (78.5PSI)
- 3155cc/min (300 Lb/hr) @ 6 bar (88PSI)
- CNG Gas fuel injector
- Spray Pattern: Single cone spray
- Dimensions: 48.65mm (1-29/32") O-ring seat to seat (Standard body length)
- Injector diameter: 14mm (35/64")
- Overall Length: 65.50mm (2-9/16")
- Short tip nozzle
- Coil Resistance: 9.1 ohms (High Impedance)
- Voltage range is 8-15 Volts.
- Injector dead time: 0.43sec @ 3BAR (43.5PSI) @ 14 Volts
- Electrical Connector: Jetronic / Bosch connector (AF49-1524)
- E85 / Alcohol fuel compatible
- Fitted with Viton upper and lower O-rings
- Can be used in generic use or custom applications

Part No: AF49-1912

FAST PRECISION FLOW INJECTORS

FAST Precision-Flow Fuel Injectors deliver the outstanding idle quality, unparallelled flow consistency and durability essential for high performance EFI engine applications. Engineered to yield faster throttle response, reduced clogging and superior fuel atomisation, Precision-Flow Fuel Injectors are manufactured to the tightest tolerances in the industry.

FAST GM LS SERIES INJECTORS

The FAST Precision-Flow Fuel Injectors are the highest flowing injectors available for GM Gen IV engines and are uniquely designed for direct installation into LS2 (sized/height), LS3, L99, L76, and LS7-style engines. The injectors are correctly sized (shorter than common LS1/LS6 injectors) and feature the correct EV6/USCAR connector, enabling a hassle-free plug-in operation. All Injector Specifications are @ 58 psi (Stock OEM LS operating pressure), Gasoline fuel & naturally aspirated.

Fuel Injector Bung

Designed for do-it-yourself fabricators who make their own multi-port fuel injection manifolds; these aluminium bushings can be welded or epoxied to a single plane, dual plane, tunnel ram or sheet metal manifold.

Fuel Injector Bung (8-pack) **FAST307017**

Sample ONLY. No pumps regulators or fittings included.

Single EFI Pump Compact Surge Tank

These compact surge tanks are designed to work with our AF49-1014 pump, or 60mm pump as well as the Bosch 044 fuel pump. These smart little tanks are designed to have the fuel pump submerged in fuel for a quieter operation and longer life of the fuel pump. These tanks feature -8ORB ports for a positive seal allowing many options to plumb the fuel system. The tank can be mounted in the engine bay to reduce the work and cost to route the fuel system from the rear of the vehicle. We offer the tank in either polished or shiny black anodised. The black anodised finish is recommended for use with corrosive fuels such as Ethanol and Methanol.

NOTE: Requires upgrade to wiring / fuses and installation of relay

Part No	Finish	Description
AF77-3144	Polished	Length 130mm x Width 130mm x Height 160mm
AF77-3144BLK	Black	Length 5" x Width 5" x Height 6.3" 2.3L capacity measured with AF49-1014 fuel pump fitted.

Sample ONLY. No pumps regulators or fittings included.

Dual EFI Pump Compact Surge Tank

These compact surge tanks are designed to work with our AF49-1014 pumps, or 60mm pumps as well as the Bosch 044 fuel pumps. These smart little tanks are designed to have the fuel pumps submerged in fuel for a quieter operation and longer life of the fuel pump. These tanks feature -8ORB ports for a positive seal allowing many options to plumb the fuel system. Fits AF939-08-10 Y-piece to merge pumps to a female -10ORB port. The tank can be mounted in the engine bay to reduce the work and cost to route the fuel system from the rear of the vehicle. We offer the tank in either polished or shiny black anodised. The black anodised finish is recommended for use with corrosive fuels such as Ethanol and Methanol. Includes block-off plate for use as single pump tank with option to upgrade to dual pumps. NOTE: Requires upgrade to wiring / fuses and installation of relay

Part No	Finish	Description
AF77-3244	Polished	Length 180mm x Width 115mm x Height 180mm
AF77-3244BLK	Black	Length 7" x Width 4.5" x Height 7" 3.8L capacity measured with 2 x AF49-1014 fuel pumps fitted.

Part No	Finish	Description
AF77-4244	Polished	Designed for mounting inside vehicle
AF77-4244BLK	Black	Designed for mounting under vehicle
AF59-3144	Black	Replacement 60mm o-ring

SURGE TANKS

Universal Fabricated Alloy Tanks

Tanks can be used for many applications including surge tanks, breather tanks and more. All female fittings are -8 ORB.

- Robotically TIG welded
- All tanks are professionally polished
- ORB ports for easy fitment and positive seal

Part No	Finish	Size - L x W x H	Litres

Pump sold separately

SINGLE EFI PUMP COMPACT SURGE TANK

Aeroflow Performance single compact surge tanks are ideal for fuel systems that use the very popular 40mm diameter fuel pumps in todays market. These smart little tanks are designed to have the fuel pump submerged in fuel for quieter operation and longer life of the fuel pump. Utilizing a billet single 40mm pump hanger with a -6an male fitting for the feed, 3 x -8ORB female ports and two electrical bulkheads. Designed to work with Aeroflow Performance AF49-1041, AF49-1042, AF49-1057 high flow fuel pumps or any other 40mm diameter fuel pumps. The tank can be mounted in the engine bay to reduce the work and cost to route from the rear of a vehicle. Both tanks are available in either polished or black anodised finish, the black anodised finish is what we recommend for use with corrosive fuels such as Ethanol and Methanol.

Length 130mm (5") x Width 130mm (5") x Height 160mm (6.3") 2.5L (84.5oz) capacity. 164mm (6-29/64") centres mounting bracket bolt hole centre to centre

NOTE: Requires upgrade to wiring / fuses and installation of relay

Part No	Finish	Description
AF77-4055	Polished	
AF77-4055BLK	Black	Replacement viton gasket
AF59-4055	Black	Replacement viton gasket

As used in single pump applications

2.5L Surge Tank

Part No	Finish	Description
AF49-1016	Polished	2.5 Litre spun alloy surge tank 3 x 3/8, 1 x 1/2 or 3 x 6AN, 1 x 8AN
AF49-1016BLK	Black	2.5 Litre spun alloy surge tank 3 x 3/8, 1 x 1/2 or 3 x 6AN, 1 x 8AN
AF59-1016S	Silver	Replacement fitting kit
AF59-1016BLK	Black	Replacement fitting kit

Removable ORB AN and Barb fittings included.

As used in dual pump applications

Dimensions: 4.5" round & 10.75" tall

Has provision for 50.8mm (2") filter bracket. Filter & bracket NOT INCLUDED

TRIPLE EFI PUMP COMPACT SURGE TANK

These compact surge tanks are designed to work with our AF49-1041 & AF49-1042, AF49-1057 pumps, or any 40mm (1-37/64) diameter pump. These smart tanks are designed to have the fuel pumps submerged in fuel for a quieter operation and longer life of the fuel pump. These tanks feature -10ORB feed & -8ORB return/overflow ports for a positive seal allowing many options to plumb the fuel system and are 7L (1.85 Gal) in capacity. We offer the tank in either polished or black anodised. The black anodised finish is recommended for use with corrosive fuels such as Ethanol and Methanol.

Length 185mm (7-1/4") x Width 185mm (7-1/4") x Height 260mm (10-1/4") 7L (1.85 Gal) capacity. 154mm (6-1/16") centres mounting bracket bolt hole centre to centre

NOTE: Requires upgrade to wiring / fuses and installation of relay

Part No	Finish	Description
AF77-4053	Polished	
AF77-4053BLK	Black	Replacement viton gasket
AF59-2070	Black	Replacement viton gasket
AF59-2250	Black	Replacement PTFE Teflon gasket

2.5L Surge Tank Dual Outlet

Part No	Finish	Description
AF49-1024	Polished	2.5 Litre spun alloy surge tank with DUAL BOTTOM OUTLET for win pump setups all ports are female -8 ORB
AF49-1024BLK	Black	2.5 Litre spun alloy surge tank DUAL BOTTOM OUTLET for win pump setups all ports are female -8 ORB

Y-piece AF939-08-10 and dual pump bracket AF64-2902 also available separately.

Dual EFI Pump Under-Car Surge Tank

The 4.75L surge tank has 6 x -8 ORB ports for multi configuration. The tank comes with dual EFI mounting bracket and 2 x AF907-08 adapters. Also available black anodised inside and out for use with alcohol and ethanol.

•ORB ports for easy fitment and positive seal.

Part No	Colour	Size - LxWxH	Litres
AF77-1044	Polished	15" x 5.9" x 6.3"	
AF77-1044BLK	Black	390mm x 150mm x 162mm	4.75L
		15" x 5.9" x 6.3"	
		390mm x 150mm x 162mm	4.75L

Fuel pumps & pump inlet fittings NOT included

check valves included

Dual EFI Pump Surge Tank Kits

The 3.1L surge tank has 6 x -8 ORB ports for multi configuration. The kit contains surge tank, dual EFI fuel pump mounting bracket and billet Y-Block (2 x -8, 1 x -10 ORB) •Robotically TIG welded •All tanks are professionally polished. Also available black anodised inside and out for use with alcohol and ethanol. •ORB ports for easy fitment and positive seal.

Part No	Colour	Size LxWxH	Litres
AF77-2044	Polished	5" x 5" x 8.25"	
AF77-2044BLK	Black	127mm x 127mm x 210mm	3.1L
		5" x 5" x 8.25"	
		127mm x 127mm x 210mm	3.1L

ALUMINIUM FUEL CELLS

- **HIGH GRADE ALUMINIUM.** 3.0mm thickness
- **ROBOT WELDED.** The fuel cell has been welded solely by a high level machine robot the quality of which can be seen by the clean corner welds.
- **SAFETY FOAM.** The fuel cell incorporates aircraft quality anti-flammable yellow safety foam. Ethanol & Methanol safe.
- **FUEL PICK-UP POINT.** As can be seen in the photo, The fuel OUT fittings are in a cavity at the base of the cell, which helps prevent fuel starvation at low fuel levels even under high G-force levels. Sump measures 6" long 6" wide & 2" depth
- **FUEL INLET / OUTLET FITTINGS.** The fuel cell incorporates all -12 ORB female threads for use in all applications. 2 X pickups and 2 X returns or 1 X return and 1 X rollover.
- **FLUSH CAP.** Designed for fast cap removal with a flip up and twist action CNC billet polished alloy cap with a 1 way air valve in the cap.
- **FUEL LEVEL SENDER UNIT.** The resistance at empty is 0 ohms and the resistance at full is 90 ohms.
- **MOUNTING BRACKETS.** The cell can be secured with the 4 sturdy mounting brackets. (Rubber mounts recommended for high flex chassis applications)
- **BLACK ANODISED AVAILABLE.** Black fuel cells are anodised inside and out for use with Ethanol (E85) and Methanol fuels.

EFI Pump Accessories

Aeroflow Performance have designed a 6061-T6 Billet single and dual pump bracket that can be used with a wide range of fuel pump's, not only Aeroflow's famous 1014 EFI pump. Can also double up as a 2-5/8" gauge holder when silencer rubbers are removed.

FUEL COOLER TANKS

FUEL COOL CAN

For Carbureted and Fuel Injected Applications up to 125 PSI working pressure

- Polyethylene shell has a much higher insulating value than cork, allowing ice to last longer and cooling fuel more efficiently for a denser air-fuel mixture
 - The higher insulating value of the shell combined with an advanced heat sink design re-duces fuel temperature 20% over other cool cans
 - The inlet and outlet are -8AN
 - Lid is held on by a wing nut with a closed-cell foam seal between the lid and can
 - NHRA approved mounting includes two stainless steel straps with T-bolt clamps and lightweight aluminum mounting bracket
 - Spacing of steel straps aligns perfectly with mounting bosses molded into the Super Cool Can housing for strong attachment
 - Holds 1/2 quart of fuel, approximate dimensions: 7-3/4" x 7-3/4" x 8" tall
- MO65127**

FUEL COOLER TANK

Aeroflow's fluid cool can is a smart and effective way to easily cool down any fluid system utilising up to -8AN (1/2") lines. The tank features -8ORB female ports with a large 76.2mm (3") screw-on cap for ease of filling tank with ice. The tank is manufactured from 5051 Aluminium sheet metal and has mandrel bent 1/2" tubing so there is no restrictions in flow. Tank can be used in many applications for example cooling your fuel system down for more power or simply trying to keep oil temps down in extreme off road applications. Tank is available in polished or black anodised and comes with mounting feet and a -4AN drain port.

Height 237mm (9-23/64"). Length & Width both 132mm (5-3/16").

AF77-4054BLK Black

FUEL TANKS & CELLS

Note: Black anodised cells can be used with Ethanol or Methanol Fuels

11.35L (3 Gal) Fuel Cell

Part No	Colour	Description
AF85-2030A	Aluminium	11.35 L, 3 US Gallons with Cavity/Sump. Fitted with Foam
AF85-2030ABLK	Black	8-1/16"L x 8-1/16"W x 15-15/16"H, 20.5cm x 20.5cm x 40.5cm

19L (5 Gal) Fuel Cell

Part No	Colour	Description
AF85-2050A	Aluminium	19 L, 5 US Gallons with Cavity/Sump. Fitted with Foam
AF85-2050ABLK	Black	10-1/4"L x 11-13/16"W x 10-1/4"H, 26cm x 30cm x 26cm

38L (10 Gal) Fuel Cell

Part No	Colour	Description
AF85-2100A	Aluminium	38 L, 10 US Gallons with Cavity/Sump. Fitted with Foam
AF85-2100ABLK	Black	14-15/16"L x 16-1/8"W x 10-1/4"H, 38cm x 41cm x 26cm

57L (15 Gal) Fuel Cell

Part No	Colour	Description
AF85-2150AS	Aluminium	57 L, 15 US Gallons with Cavity/Sump. Fitted with Foam
AF85-2150ASBLK	Black	18-1/8"L x 20-1/16"W x 10-1/4"H, 46cm x 51cm x 26cm

57L (15 Gal) Fuel Cell with Flat Bottom

Part No	Colour	Description
AF85-2151AS	Aluminium	57 L, 15 US Gallons with Flat Bottom. Fitted with Foam
AF85-2151ASBLK	Black	18-1/8"L x 20-1/16"W x 10-1/4"H, 46cm x 51cm x 26cm

76L (20 Gal) Fuel Cell with sump

Part No	Colour	Description
AF85-2200AS	Aluminium	76 L, 20 US Gallons, with Cavity/Sump. Fitted with Foam
AF85-2200ASBLK	Black	20-1/16"L x 24-3/8"W x 10-1/4"H, 51cm x 62cm x 26cm

95L (25 Gal) Fuel Cell with sump

Part No	Colour	Description
AF85-2250AS	Aluminium	95 L, 25 US Gallons, with Cavity/Sump. Fitted with Foam
AF85-2250ASBLK	Black	25-1/4"L x 24-3/8"W x 10-1/4"H, 64cm x 62cm x 26cm

57L (15 Gal) FUEL CELL, FLAT BOTTOM with TRIPLE PUMP HANGER

Aeroflow 57L (15 US Gallons) fuel tank already fitted with our triple pump hanger, perfect for high fuel flow requirements. The hanger works with 1, 2 or 3 60mm (2-3/8") or 40mm (1-37/64") diameter fuel pumps and is internally baffled to eliminate surge. Length 460mm (18-1/8") x Width 510mm (20-1/16") x Height 260mm (10-1/4")

0-90 ohm Fuel Level Sender Included.

3 x 60mm TRIPLE PUMP HANGER

AF85-4050AS	Aluminium
AF85-4050ASBLK	Black

3 x 40mm TRIPLE PUMP HANGER

AF85-4051AS	Aluminium
AF85-4051ASBLK	Black

76L (20Gal) FUEL CELL, FLAT BOTTOM with TRIPLE PUMP HANGER

Aeroflow offer the 76L (20 US gallons) fuel tank already fitted with our triple pump which is perfect for high horsepower and high fuel applications. The hanger works with 1,2 or 3 60mm (2-3/8") or 40mm (1-37/64") fuel pumps and is internally baffled to eliminate fuel surge. Flat bottom tank.

Length 620mm (24-3/8") x Width 510mm (20-1/16") x Height 260mm (10-1/4"). 0-90 ohm Fuel Level Sender Included.

3 x 60mm TRIPLE PUMP HANGER

AF85-4070AS	Aluminium
AF85-4070ASBLK	Black

3 x 40mm TRIPLE PUMP HANGER

AF85-4071AS	Aluminium
AF85-4071ASBLK	Black

BILLET SINGLE 40mm PUMP HANGER

Holds 1 x 40mm (1-37/64") EFI pumps

Now you can upgrade your fuel delivery system when converting over from carb to efi with this billet single fuel pump hanger from Aeroflow Performance. The billet hanger has a built in fuel cap and has the ability to mount one AF49-1041, AF49-1042, AF49-1057 or any 40mm (1-37/64") diameter fuel pumps. CNC machined from billet 6061-T6 aluminium with black anodized option for maximum durability and corrosion protection E85/methanol.

- Includes PTFE in tank hose with 2 clamps.
- Suits a 120mm (4-23/32) bolt circle and 102mm (4") diameter cutout.
- For use with 250mm (10") deep tanks.
- Fits E85 compatible Aeroflow pump AF49-1041 or 40mm (1-37/64") diameter in tank pumps.
- Built-in fuel manifold chamber for better pressure equalization and no external couplers.
- -6AN male feed fitting included.
- -16 port / filler cap.

NOTE: fuel pumps and wiring not included.
NOTE: Requires upgrade to wiring / fuses and installation of relay these items are NOT INCLUDED.

AF64-4054	Polished
AF64-4054BLK	Black
AF59-2250	Replacement PTFE gasket
AF59-2070	Replacement Viton gasket

BILLET TRIPLE 40mm PUMP HANGER

Now you can upgrade your fuel delivery system without having to replace or customise your fuel cell. Aeroflow has developed a triple pump hanger that replaces the standard fuel cell filler cap and is a straight bolt in item. The billet hanger has a built in fuel cap and has the ability to mount one, two or three AF49-1041 or AF49-1042, AF49-1057 EFI fuel pumps or any 40mm (1-37/64") diameter fuel pumps. CNC machined from billet 6061-T6 aluminium with a black anodized option for maximum durability and corrosion protection against E85/Methanol.

- Suits a 120mm (4-23/32) bolt circle and 102mm (4") diameter cutout.
- For use with 250mm (10") deep tanks.
- Single, twin or triple E85 compatible Aeroflow pumps AF49-1041 or 40mm (1-37/64") diameter in tank pumps.
- Built-in fuel manifold chamber for better pressure equalization and no external couplers.
- -10ORB feed for maximum flow.
- -16ORB port / filler cap.

NOTE: fuel pumps, wiring and intank clamps not included.
NOTE: Requires upgrade to wiring / fuses and installation of relay these items are NOT INCLUDED.

Part No	Finish
AF64-4053	Polished
AF64-4053BLK	Black
AF59-2250	Replacement PTFE gasket
AF59-2070	Replacement Viton gasket

Fuel pumps NOT included

Billet Triple 60mm Pump Hanger

Holds 3 x 60mm(2-3/8") EFI fuel pumps. Deliver more fuel to your high powered car with Aeroflow's Triple Pump hanger kit! Our triple Pump hanger is CNC machined from billet 6061-T6 aluminium with a black anodized option for maximum durability and corrosion protection against E85/Methanol. The 3 piece head incorporates a weld on for custom tanks. The Buna N O-rings provide a positive seal for the internal fuel log which has a -12 feed for large flow applications with a -8 return. With 3 x -8 internal feeds along with the check valves and male to female joiners which remove the need for in tank hose or clamps. We've designed the CNC Billet hanger to mount 2 or 3 Intake pumps

- Suits a 205mm or 8" diameter cutout.
- For Use with 250mm or 10" deep tanks.
- Twin or triple E85 compatible Aeroflow pumps AF49-1013 or Bosch in tank pumps
- Built-in fuel manifold chamber for better pressure equalization and no external couplers
- -12 feed for maximum flow
- -8 Return
- Pump wiring kit

FUEL CELL 3 x 40mm TRIPLE

PUMP HANGER CONVERSION KIT

Your Aeroflow triple pump (3x60mm) fuel cell can now be converted to accept the popular smaller diameter 40mm (1-37/64") fuel pumps such as our AF49-1041, AF49-1042 or AF49-1057. This conversion Kit includes the pump bracket holder, a new stalk and new in-tank PTFE fuel hose.

To suit our AF85-4050AS, AF85-4050ASBLK, AF85-4070AS, AF85-4070ASBLK fuel cells only.

AF59-4053BLK

HOLDEN VE / VF FUEL PUMP MODULE

Aeroflow Performance is proud to release this direct fit bolt in in-tank fuel module for the Holden Commodore VE-VF. With these modern Commodores being tuned to amazing power levels thanks to E85 this module is capable of holding up to 3 x 40mm diameter fuel pumps at a time. This will perfectly support power levels from standard all the way to 1800hp while still retaining the factory fuel tank with all standard seals, lock rings and internal crossover lines. It also allows you to reuse the OEM fuel level sender for complete compatibility with factory electronics and features a hermetic wire pass through for absolutely no chance for fuel smells/leaks into the cabin while still upgrading to the necessary larger wires.

- Suits Holden Commodore VE-VF models
- Accepts single, twin or triple 40mm (1-37/64") fuel pumps such as AF49-1041, AF49-1042, AF49-1057 sold separately.
- E85 compatible.
- -8ORB feed and return fittings.
- After market fuel regulator, custom fuel pump wiring and fuel lines required for installation these parts are NOT INCLUDED.

AF64-4055 HOLDEN VE / VF FUEL PUMP MODULE
AF59-4056 Fuel pump module compression fitting 1 per pack
AF59-4057 Fuel pump module EFI adapter 1/2" male to -4ORB

STEALTH FUEL CELL WITH BRUSHED FUEL PUMP

15-gallon Street/Strip Fuel Cell with Stealth A1000 Brushless Pump, aircraft filler cap, ORB-10 outlet, AN-08 baffled return and dual, roll-over protected AN-08 vents. This is the same fuel cell design, but with larger capacity of 15-gal vs 6-gal used in the Ford Cobra Jet, Chevy COPO Camaro and many of the MOPAR Drag Pack cars. Aeromotive's True Variable Speed Controller offers the advantages of built-in pump speed control via a dedicated 0-5V analog DC input signal. The Controller capitalizes on our existing brushless technology by reducing fuel flow during low engine demand and decreasing an already low current draw, therefore minimizing both motor heat the introduction of environmental via reduced fuel recycling.

- Lighter than the traditional fuel pump.
- Reduced current draw at higher, EFI pressures.
- Extended service life in methanol and ethanol.
- Integral, external brushless controller for clean installation, cooler fuel and enhanced reliability.
- Quieter than the traditional fuel pump.
- ORB-10 outlet port.
- Requires straight 12-VDC to 16-VDC power supply.
- Not compatible with pulse modulated systems or fuel pump speed controllers.

PRO SERIES

FUEL CELL

This aluminium fuel cell is available in a 6-gallon size and fitted with a Pro Series fuel pump. Unlike conventional fuel cells, the Stealth Cells feature an innovative baffling/basket inside and an in-tank fuel pump with pre-pump fuel filter. These fuel cells perform unlike anything you've seen.

Fuel Injected
 Up to 2,200 HP - Naturally Aspirated
 Up to 1,700 HP - Forced Induction
 Carburetted
 Up to 2,600 HP - Naturally Aspirated
 Up to 2,000 HP - Forced Induction

STEALTH

FUEL CELLS

These aluminium fuel cells are available in 6, 15 or 20 gallon size and fitted with any 1 of 3 popular fuel pumps. Unlike conventional fuel cells, the Stealth Cells feature an innovative baffling / basket inside and an in tank fuel pump with pre-pump fuel filter. Whether it's drifting, the weekend autocross or a date with the drag strip, these fuel cells perform unlike anything you've seen. In fact, the Aeromotive Stealth Fuel Cells are the OE fuel system for the Ford Cobra Jet Mustang, the Chevrolet COPO Camaro and the Mopar Drag Pak Challenger. If they can fuel these record setting factory hot rods and meet the strict standard of the Big 3, surely they can fuel your ride.

- Choose from 3 different fuel pumps: A1000, Eliminator or 340 Stealth
- Available in 3 sizes: 6.5g, 15g and 20g
- A1000 and Eliminator feature (1) ORB-10 outlet port
- 340 Stealth features (1) ORB-08 outlet port
- Each provide (1) AN-08 Male Flare return port
- All include (2) AN-08 vents with rollover safety valves
- 15g and 20g cells feature 0-90 Ohm fuel level sending unit
- Standard 12-bolt locking filler cap
- 6 gal dimensions: 12" w x 12" l x 10" h
- 15 gal dimensions: 18" w x 20" l x 10" h
- 20 gal dimensions: 20" w x 24" l x 10" h

GEN II STEALTH FUEL TANK - FORD MUSTANG 69-70

- Perfect for EFI and carbureted engines • OEM appearance and 20-gallon capacity • High flow, quiet 200 or 340 Stealth fuel pump
- 73-10 Ohm fuel level sending unit included • Billet hat with ORB-06 outlet and return ports • Utilizes OEM fuel outlet location and seal
- Featuring patented award-winning Phantom Baffle technology for superior fuel slosh control • Plug-and-play; comes pre-assembled with pump and sending unit in the tank, ready for install
- Utilizes stock mounting straps, filler cap, and vent Fuel Injected Engines (gasoline):
- Up to 600 HP - naturally aspirated.
- Up to 450 HP - forced air induction.

Carburetted Engines (gasoline):

- Up to 750 HP - naturally aspirated.
- Up to 600 HP - forced air induction.

ARO18147

MUSCLE CAR STEALTH TANKS

Brand new to the Stealth Line-up, these are stamped steel reproduction tanks with a twist. They feature the fuel pump built right into the tank itself as well as an internal baffling system to ensure the pump is submerged in fuel, even at low fuel levels and in extreme driving conditions. With these tanks, you're strapping today's technology into your classic, making them perfect for LS swaps and EFI conversions but still work perfectly with carburetted engines. 3 applications to choose from already!

- Silver Powdercoat finish • EFI-style internal baffling
- 0-90 Ohm Universal Fuel Level Sending Unit • Black Anodized Pump Hanger Assembly • 340 Stealth Fuel Pump (P/N 11140)
- Pre-Pump Filter Sock Assembly • (3) ORB-06 Ports – Outlet, Return and Vent/340 Stealth Tank SPECS:

Fuel Injected Engines:

Up to 850 HP – naturally aspirated

Up to 700 HP – forced air induction

Carburetted Engines:

Up to 1000 HP – naturally aspirated

Up to 800 HP – forced air induction

JAZ ALUMINIUM STREET ROD FUEL CELL

- Flush mount aircraft style cap assembly
- 0-90 Ohm fuel level sender fitted
- One -8 AN vent Fitting
- One -8 AN return fitting
- One -8 AN outlet fitting

Size	L x W x H	Part Number
14 Gal (56L)	10" x 12" x 30"	JAZ210-614-03

ALUMINIUM

RACE FUEL CELL

- 5051 aluminium TIG welded
- Safety foam filled
- Available with aircraft style flush mount assembly or low pro drag filler 1-3/4" high
- Two AN-8 fast flow outlet fittings in the sump
- One AN-8 return fitting
- One AN-8 tip over valve vent fitting
- Available with 0-90 ohm sending unit installed

Size	L x W x H	Part Number with Foam
15 Gal (57L)	18-1/8" x 20-1/4" x 10-1/4"	JAZ210-615-03

JAZ Jr. Dragster Fuel Cells

These Approved Jr. Dragster fuel cells by Jaz Products feature a seamless, cross-linked, rotomolded polyethylene outer shell design for long-lasting stability. They come available with or without aviation safety foam

JAZ230-050-01

FUEL CELL MOUNTING KITS

- Makes fuel cell mounting quick & easy
- For use on Jaz plastic fuel cells only

Application	Part Number

JAZ FUEL CELLS

JAZ Products maintains its own factory, equipment and moulds, producing the highest quality fuel cells, rotationally moulded in seamless cross-linked polyethylene. JAZ Products only uses aviation safety foam in all their fuel cells. This foam is far superior and has a 10 times longer service life than that of other non fuel approved foams on the market.

1 Gal NITROUS ENRICHMENT FUEL CELL

- Seamless cross-linked polyethylene outer shell • Available with or without safety foam
- Low pro drag fill 1-3/4" high (#225-series) • Aircraft style flush mount cap assembly (#220-series)
- Two AN-8 fast flow outlet fittings in the sump • One AN-6 return fitting • One AN-6 tip over valve vent fitting

MNMP800-8 Brackets Vinyl dipped steel clamp style

*****PLEASE NOTE*****

Brackets Are Sold Separately.

MOON FUEL TANK STREET ROADSTER 600 SERIES

600 Series Moon tanks are often used in bed of Hot Rod pick ups depending on width of pick up bed. You can choose different size tank. Mounting is easy with 2 bolts on each tank brackets through pick up bed. We make custom length tank upon request. As a fuel system and fuel tank specialist, MOON has created a line of fuel containers. The MOON 600 series tanks are 10" in diameter. .100" thick extruded aluminum bodies with metal spun aluminum ends. Proven to be the most rugged through endurance, off-shore racing and punishing off-road racing. All tanks feature the MOON Sun Ray finish and Heli-arc welded by our certified welder. Moonza caps, fuel gauge sending units and tank brackets are sold separately. 24" long 3/4" outlet bung aluminum cap and (2) 3/8" NPT returns on top 2-1/4" knurled vented cap. 10" diameter. 3/4" Outlet on bottom

So-Cal Screw-on filler adapter kit.

2-1/4" Steel neck with thread can accept MOON fuel caps
S0004-3208

Fuel tank to frame mounting kit.

Tank mounts on one frame rail with the long bolt, spring, rubber pad & castle nut. The other side of the tank is mounted directly to the frame rail with 2 bolts and nuts.

VIB-9002SK 1932-48 12piece kit

Manufactured from 316 stainless steel and polished to a bright mirror finish. The 3" diameter is only .080" thick and can be easily recessed if desired. The flush cap is actuated with a stainless interface key that will unscrew the cap from its O-ring seal. A stainless chain prevents leaving or losing the gas cap after filling up your tank. Easy to install and easy on the eyes, the COOLCAP™ is the perfect finishing touch to your ride. COOLCAP™ comes with all mounting hardware and instructions for easy installation.

- Polished stainless steel
- 3" flange diameter - .080" thick
- 1.5" neck diameter
- Stainless mounting screws included
- Stainless key included (you can also use a coin to open)
- Cap seals with O-ring
- Cap tethered with stainless chain

FUEL FILLER CAP

Manufactured from 316 stainless steel and polished to a bright mirror finish. The 3" diameter is only .080" thick and can be easily recessed if desired. The flush cap is actuated with a stainless interface key that will unscrew the cap from its O-ring seal.

- Polished stainless steel
- 3" flange diameter - .080" thick
- 1.5" neck diameter
- Stainless mounting screws included
- Stainless key included (you can also use a coin to open)
- Cap seals with O-ring
- Cap tethered with stainless chain

FORD Script locking cap

This locking cap is a highly detailed die casting, chrome plated with stainless spring loaded key cover with Ford script. Includes 2 keys.

FUEL TANK RETURN FITTING

This fuel tank fitting from Aeroflow Performance allows the user to alter a stock tank to have a return fuel line installed with ease. This is great when upgrading to a larger in-line electric fuel pump that requires a return to be installed into the fuel tank. The installation is easier as this acts like a rivet nut insert. Simply drill a hole into the tank, install the rivet insert into the tank, and screw in the supplied bolt to rivet the lock it into place. A 1/4" NPT to -6an fitting is included to allow the user to plumb up the return fitting.

AF934-06BLK BLACK FINISH

UNIVERSAL FUEL TANK SUMP

The universal steel sumps are designed to be installed onto the lowest portion at the rear of your steel factory fuel tank to create a sump that has constant fuel pressure to stop fuel surge and allows you to plumb up to -12 lines for large fuel systems.

Part No Description
AF85-1000 Steel sump extension with 2 x -12 ORB female ports

RCI7037A	Replacement 1-3/4" Cap

HOLLEY HYDRAMAT

The amazing HydraMat is Holley's patent pending design that solves the problems associated with traditional fuel pick-ups in stock fuel tanks as well as racing fuel cells. During hard cornering, acceleration, stopping, inclines, and low fuel conditions fuel runs away from the fuel pick up which introduces air into the system resulting in poor engine performance and even stalling. HydraMat is the solution! Surface tension and fluid wicking are the secrets of the HydraMat, giving it the amazing ability to draw from nearly any area that has contact with fuel and then store it in its internal reservoir. As an area of the HydraMat is uncovered, the tiny pores of the media seal off through surface tension, forcing fuel to be contained in the reservoir and drawn from other areas of the mat where fuel continues to be available. The sheer size and coverage area of the HydraMat allows it to pull fuel from virtually any area in the tank or cell eliminating the need for specialty reservoirs and pick up pumps saving cost and greatly reducing complexity.

- Patent pending design that solves the problems associated with traditional fuel pick-ups in stock fuel tanks as well as racing fuel cells
- Greatly reduces the potential for air to enter into the fuel system which can result in poor engine performance and/or engine stalling
- Perfect for vehicles experiencing fuel starvation during hard cornering, acceleration, stopping, inclines, and low fuel conditions
- Surface tension and fluid wicking allow the HydraMat to continue to draw fuel from the tank or cell even when part of the mat is uncovered
- As an area of the HydraMat is uncovered, tiny pores in the media seal off through surface tension, forcing fuel to be drawn from other areas of the mat where fuel continues to be available
- Unique internal reservoir assists in keeping fuel available at the pickup even under extreme fuel slosh conditions
- Eliminates the need for specialty reservoirs, sumps and pick up pumps saving cost and greatly reducing complexity
- Also acts as a 15 micron pre-filter eliminating the need for a separate filter before the fuel pump
- Can be folded and compressed for easy installation through a variety of fuel cell openings
- HydraMats are also available in other sizes and shapes to fit a variety of stock fuel tanks and/or race fuel cells
- Works with Alcohol, Ethanol, Methanol, and E-85 fuels
- Not for use with oils or diesel fuels
- CAUTION Do NOT use PTFE pipe sealant paste! Loose particles will be drawn into the fuel pump and it will fail!

VP RACE FUELS

VP Racing has been making the best fuels for motor sports since 1975. In fact, in race venues not controlled by a fuel rule, VP consistently fuels more winners than any other fuel company. VP's fuels have a well-deserved reputation for superior power and consistency -- as illustrated by the NHRA Pro Stock Champions who have made VP their fuel of choice for 29 consecutive years -- a record unmatched by any major sponsor in the industry. One of the reasons for VP's consistent success is our focus. We don't manufacture pump gas and we don't run a chain of convenience stores. We make power. And we make it for racing.

UNLEADED FUELS

Motorsport 100

Designed for aluminium head engines with CRs up to 13:1 and cast iron heads up to 14:1. Allows for more advanced timing than pump gas in normally aspirated engines, as well as an increase in boost on turbo and supercharged engines. The higher octane also permits use of more powerful nitrous oxide systems. Works well in the latest generation of electronically controlled turbo engines.

- Color: Orange
- Oxygenated: Yes
- Motor Octane: 96
- Specific Gravity: .746 at 60° F

Motorsport 100 (19 Litre) VPM100E-20

ROO100

Roo100 has been designed for competition use. Roo100 has been homologated by Motorcycling Australia for use in all disciplines of competition, as outlined in GCR 12.9.5 of the 2010 edition of the Manual of Motorcycle Sport. Roo100 is an oxygenated unleaded racing fuel with a MON of 91+ and a RON of 99+ that also meets the Australian Petrol Fuel Quality Standard making it street legal. Roo100 offers better protection against detonation in harsh racing conditions, makes up to 3% more Horsepower and Torque than pump fuel and gives you exact consistency so you don't have to alter your tune up from drum to drum. Due to Roo100's specific gravity (.711 @ 60F) and oxygen content it requires a 4% to 6% increase in fuel volume over most premium unleaded (non oxygenated) fuels. **MA approved**

- Colour: Fluro Yellow
- Oxygenated: YES
- Motor Octane 91+
- Specific Gravity: .711 at 60° F

ROO100 (19 Litre) VPRO0100-19

VP EXPORT

Designed for FIA/CAMS rally cars with 4-stroke atmospheric and Group N Turbo engines.

Makes significantly more power and torque than pump fuel along with faster accelerations and shorter turbo response time.

The perfect fuel for all forms of circuit racing requiring the focus to be on fast acceleration and consistency rather than all out horsepower.

This fuel is used for those wanting the best out of the circuit racing vehicle without compromise, and not being limited to 98 RON fuel.

Will require retuning of the engine, including increasing fuel curve due to its oxygenation levels.

Colour : Fluro Clear Motor Octane : 87 Research Octane : 101

R+M/2 : 94 Oxygen Content : 2.7 Mass%

VP Export (19Litre) VPEXPORT-19

Motorsport 109

Produces more power than any other unleaded fuel. Recommended for higher boost applications with CRs up to 11:1 or naturally aspirated engines up to 13:1.

- Color: Clear
- Oxygenated: Yes
- Motor Octane: 109
- Specific Gravity: .722 at 60° F

Motorsport 109 (19 Litre) VPM109-19

Motorsport 109 (200 Litre) VPM109-205

ROO KX

Homologated for Karting Australia. Karting Extreme is the Ultimate blend that provides maximum power on the track. Suitable for use in Karting applications that need to conform to CIK-FIA specifications.

- Specific Gravity: 0.758 @ 60°F/15.6°C
- Color: Orange
- MON: 89.6
- RON: 102
- R+M/2: 95.8
- RVP: 7.58psi/55kpa Oxygen
- Content: 2.6% by weight
- Stoichiometric Ratio: 14.38

VPROO KX (19 Litre) VPROO KX-19

C10

The best non-oxygenated unleaded racing gasoline on the market. C10 does not contain any metal compounds and will not harm catalytic converters or oxygen sensors. C10 can be used in a majority of applications.

C10 complies with the Australian Petrol Standards and is a street legal fuel.

VPC10-19

ROO99

Homologated with Motorcycling Australia for use in 2019. Roo 99 is a cost-effective, unleaded replacement for Avgas & PULP 98.

Compared with other 100 octane racing fuels that only have a Motor Octane of 89. Roo 99 has a Motor Octane of 93.5, this fuel will keep your engine safe while making maximum power on the track.

Power Gains: Roo 99 will give you up to 3% more power than AVGAS.

Tuning Tips: Can be tipped straight in. For maximum power, we recommend a fuel increase of 1-3%.

VPRO099-19

ETHANOL FUELS

C85

If you're committed to using E85 type fuels, C85 is by far your best choice. Conventional E85 fuels are notoriously inconsistent. By contrast, C85 is blended with a consistent proportion of ethanol and every other component in every drum.

C85 makes up to 4% more power and torque than conventional E85. With higher quality pure components, C85 is superior to E85 in terms of the cooling effect, resistance to detonation and even includes corrosion inhibitors to fight the issues presented by ethanol. C85 works well in drag racing, oval track, off-road and virtually any other automotive application, in particular, forced induction applications due to its lower vapour pressure. **DO NOT USE WITH INJECTORS THAT ARE NOT COMPATIBLE WITH MTBE.**

VPC85-19

X85

Hassle free E85. Blended with 85% ethanol and 15% top quality hydrocarbons every time.

VPX85-19

DIESEL FUELS

TORQ DX, diesel race fuel formula!

Tests have shown to offer more power, more torque and more consistent engine temperatures. TORQ DX represents the next generation in VP's quest to develop top performing diesel racing fuels.

Brian Scott, of Prairie Performance, tested TORQ DX against VP TORQ using an 1150 Hp engine and witnessed significant power gains.

"We saw a 15-20 Hp increase across the whole rpm range, but it worked particularly well at driving the turbo on the bottom end.

At Nixa, Missouri-based Baillie Diesel, Jim Greenway tested TORQ DX against his custom blend of enhanced No. 2 diesel, something he's used for the last 10 years.

"TORQ DX gave us a 30 Hp increase on our 1300 Hp engine while slightly lowering engine temperatures and keeping them more consistent across the rpm range. I have no doubt this fuel will offer superior performance in tractor pulling, drag racing, road racing or any other diesel application."

VPTORQDX-19

METHANOL & NITROMETHANE

M-1 Methanol

M-1 Racing Methanol has a 99.95% minimum purity - the highest purity available. With M1, engines run cooler and are less subject to corrosion. VP uses only lined drums which prohibit rust, corrosion and metal deposits that can contaminate fuel delivery systems. Recommended for all methanol-legal racing applications.

M-1 Methanol (19 Litre) VPM1-19

M-1 Methanol (200 Litre) VPM1-205

VP M5 Methanol

M5 is simply the best performing methanol on the market. Using nitrated compounds to make more power than M3, M5 will also offer the same or better protection against detonation. Like M3, M5 offers a wider range for tuning and will offer the same consistency run to run as M3. M5 also reduces noxious methanol fumes, although not quite as well as M3. M5 is not pure methanol and won't pass a water test.

M5 Methanol (19 Litre) VPM5-19

M5 Methanol (200 Litre) VPM5-200

AT Racing Methanol

Coogee Methanol is the only 100% pure Methanol produced in Australia. Used by many Top Alcohol and Doorslammer teams.

AT Racing Methanol (19 Litre) RPCOOGEE-20L

AT Racing ethanol (200 Litre) RPCOOGEE-200

Racing Nitromethane (Nitro)

99.9% Highest quality pure Nitromethane, as used by top teams world wide. Each drum is tested for purity and consistency. Mixes with methanol for drag racing, oval track and hobby applications.

Nitromethane (200 Litre) RPNITRO-500LB

Racing Castor Oil

AT Racing Castor Oil is specially formulated for the high RPM, high load demands of karting, motocross and other 2-stroke applications. Blended with the most advanced extreme pressure (EP) additives to enhance the natural lubrication of castor oil for extended engine life. Ideal lubricant for gasoline, alcohol and nitro fuels.

AT Racing Castor Oil (4 Litre) VPAT-CASTOR

Upper Cylinder Lubricant

VP's M2 Fuel System Additive for Methanol Engines leaves a thin film of lubrication to protect against corrosion between races and protects valves, guides, cylinder walls, fuel pumps, and aluminium fuel systems.

Strawberry scent bottles available, to mask the harsh chemical smell of methanol and reduce irritation to eyes and nose allowing drivers and mechanics to work more comfortably. 1 bottle treats 205 Litres of fuel.

M2 Upper Lube

VPM2-UPLUBE

M2 Upper Lube (Strawberry)

VPM2-UPLUBESS

"Madditive™" Performance Chemicals - Formulated by the "Mad Scientist™"

VP's "Madditive" line of performance chemicals for automotive, powersport and marine applications is engineered to improve performance as well as your bottom line. VP's reputation for quality and performance make these line extensions a natural fit in your product mix. VP Madditives are engineered with the same leading technology and passion for performance that VP's 'Mad Scientist' brings to our race fuels.

Octanium Unleaded

Adding Octanium Unleaded octane booster can bump up the octane to stop the rattle or ping of a car or truck engine might have to endure under heavy loads or towing. The fact that it also makes for accelerated performance on the street or the track and is safe for cars with converters or oxygen sensors makes this product an all-around performer."

VP's New Octanium Unleaded increases octane up to 7 numbers and improves throttle response and acceleration. It cleans fuel injectors, eliminates gum and varnish build-up, and acts as a lead substitute. One bottle treats up to 10 gallons of gasoline, increasing octane by up to 70 points.

VP-OCTANIUM-UL

CETANIUM™

Cetane Concentrate (32oz. treats up to 10 gallons) Off-Road Racing Formula:

- Increases cetane
- Cleans injectors and pumps
- Replaces lost lubrication
- Biodiesel protection
- Increases mileage
- Reduces Smoking

VP-CETANIUM

Fuel Stabilizer with Ethanol Shield™

(8oz. treats up to 80 gallons)

Street Legal Formula:

- For all 2 & 4 cycle engines
- Eliminates ethanol fuel problems
- Reduces heat
- Extends engine life
- Protects and prevents repairs
- 3 year fuel stabilizer

VP-ETHANOLSHIEL

Power Boost™

(16oz. treats up to 18 gallons)

Street Legal Formula:

- Improves vaporization and enhances combustion
- Restores lost power
- Reduces need for higher octane
- Cleans fuel system, removes deposits from combustion chamber
- Provides "seat-of-the-pants" power boost

VP-POWERBOOST

Fuel System Cleaner

(16oz. treats up to 30 gallons)

Street Legal Formula:

- Cleans entire fuel system
- Provides 5,000 mile protection
- Increases fuel mileage
- Reduces harmful emissions
- Cleans pistons, rings, valves and restores performance
- Virtually eliminates knocking and pinging

VP-FUEL CLEANER

Mini-Madditive™ Fuel System Cleaner for Small

Engines (2oz. treats entire fuel system)

Formulated for 2 and 4 cycle engines in portable outdoor power equipment, VP's Mini-Madditive cleans fuel systems fouled by deposits and corrosion caused by ethanol-blended street fuel.

- Cleans pistons, rings and valves
- Restores performance
- Perfect pretreatment before introducing ethanol-free VP small engine fuel

FUEL ADDITIVES

CATACLEAN - FUEL AND EXHAUST SYSTEM CLEANER

Cataclean is a patented EPA-approved complete engine, fuel, and exhaust system cleaner that re-reduces carbon build-up and also cleans your vehicle's oxygen sensors, fuel injectors, and cylinder heads.

Cataclean does not alter fuel composition and is safe for gasoline, diesel, and hybrid engines.

Testing at an independent emissions testing facility showed using Cataclean can lower your total hydrocarbon emissions (Performance results are dependent on driver habits and vehicle condition).

Use Cataclean to fix drivability issues such as power reduction, hesitation, and hard starts, as a pre-treatment before an emissions test or to extend the life of your vehicle. A well-running engine helps to restore and maintain catalytic converter efficiency. Use four times a year to help maintain proper engine operation.

- EPA Approved
- Easy to use - Simply pop, pour and go every 3 months
- Original long nose bottle which is capless gas tank compatible
- Does not alter fuel composition and is safe for gasoline, diesel and Hybrid engines
- Restores Catalytic Converter, Oxygen Sensors, Fuel Injectors and cylinder heads
- Reduces Hydrocarbon Emissions on Gas Motors by up to 50%
- Reduces carbon build-up
- Legal in all 50 states
- Patented Formula
- Improves Fuel Efficiency and MPG
- New COEX-HDPE bottle constructed for increased strength with no evaporation

MG120007 16oz (473ml)

ThreeBond

ThreeBond 6601J Super Engine Conditioner

Without dismantling the throttle body, injector and combustion chamber, Super Engine Conditioner is able to clean up the dirty fuel injector, intake valves and combustion chamber.
Super Engine Conditioner 240ml
TB6601J-240

REDLINE COMPLETE

FUEL SYSTEM CLEAMER

- Cleans injectors, carburetors, valve and combustion chamber deposits with a concentrated blend of the most powerful high-temp and low-temp detergents available
- Cleans to nearly 100% efficiency in one treatment
- Reduces need for octane by up to two points
- Contains synthetic upper cylinder lubricant
- Cleans pollution control valves
- Use one bottle per tank for most effective treatment of neglected vehicle
- Also use in smaller doses for maintenance as one bottle treats up to 100 gallons
- Suitable for use with oxygenated fuel
- Safe for continual use
- Same chemistry is also available in 4oz dosage as Complete Fuel System Cleaner for Motorcycles

Description
Fuel System Cleaner Additive 15 oz (443 ml)
Part No.
RED60103

REDLINE LEAD SUBSTITUTE

- Prevents valve seat damage in engines designed for leaded gasoline
- Prolongs the useful life of older engines without updated valve seats
- Also cleans carburetor deposits and injectors, safe for catalytic converters
- For racing, marine, or off-road use only
- 1oz treats up to 10 gallons

Description
Lead Substitute Additive 12 oz (354 ml)
Part No.
RED60202

REDLINE ALCOHOL & NITRO FUEL LUBE

- Prevents gelling and corrosion in methanol and nitromethane fuel systems
- Lubricates upper cylinder and fuel system, increases power with more ring seal
- Replaces lubrication lost by wash of dry fuels
- Not detectable by normal fuel tests, mixes with only slight agitation
- Use 1oz per 5 gallons, one bottle treats up to 55 gallons
- Do not use with catalytic converters

Description
Upper Cylinder Lube for Alcohol & Nitro 12 oz (355 ml)
Part No.
RED41102

REDLINE DIESEL FUEL CATALYST

- Designed for use in all diesel engines - compensates for latest low-sulfur fuels
- Diesel Fuel Catalyst and 85 Plus are products with the same chemistry
- Promotes better fuel combustion and fuel system lubrication
- Provides faster ignition, reduced detonation and smoke, improved efficiency.
- Powerful high-temp detergents to clean fuel injectors
- Lubricates O-rings and seals to increase injector pump life, reduces ring friction
- Contains cetane booster for added power benefits
- Available in winterized formula, reduces pour point of typical fuel by 25°F
- Use one bottle per tank-treats up to 100 gallons
- All Red Line Diesel additives comply with federal low-sulfur content requirements
- Rather than creating new products in the diesel category, Red Line reformulates these products often to ensure that they meet the changing demands of the latest diesel fuels
- Winter formulas use pour-point reducers to keep wax in suspension and reduce wax crystals to pass through filters and injectors

Description
Diesel Fuel Catalyst (355 ml)
Part No.
RED70102
Diesel Fuel Catalyst (1 Gallon)
RED70105

REDLINE RL-2 DIESEL

IGNITION IMPROVER

- Our most concentrated diesel product, popular for semis, agricultural, fleet tanks
- Cleans and lubricates injectors, pumps, and rings, improving efficiency up to 5%
- 15oz treats 100 gallons/gallon treats 850 gallons for a strong clean up dose
- All Red Line Diesel additives comply with federal low-sulfur content requirements
- Rather than creating new products in the diesel category, Red Line reformulates these products often to ensure that they meet the changing demands of the latest diesel fuels
- Winter formulas use pour-point reducers to keep wax in suspension and reduce wax crystals to pass through filters and injectors

LUBRICANTS & SEALERS

AEROFLOW THREAD PASTE

Aeroflow's Aero Seal thread sealing paste contains PTFE to assist in sealing and avoid binding of threads. Recommended for use with all threaded fasteners and adapters in aluminium, steel, stainless steel and plastic. Aero Seal is an anaerobic paste that remains liquefied until installation to provide a positive seal and can be used in temperature ranges from -58° to 400°F / -50° to 204°C. Sold individually or in 20 piece bulk packs.
AF98-2023 Aeroflow thread paste 50ml squeeze tube
AF98-2023-20 Bulk 20 pack of Aeroflow thread paste 50ml tubes

ARP Thread Sealer

It's difficult to determine the amount of torque required to provide the correct preload and clamp force of a given fastener. For example - when tightened, dry uncoated fasteners use up about 95% of the applied torque simply by overcoming the friction between the male and female threads. To ensure that all ARP fasteners provide the optimum level of service, the installed residual stress is calculated and verified experimentally using a superior quality lubricant. It is important to note that the friction coefficients of lubricants vary dramatically, making it difficult to consistently produce the exact amount of stress within the fastener to clamp the components together. That's why ARP developed an ultra-consistent lubricant and recommend the use of our premium grade ASSEMBLY LUBRICANT or THREADSEALER in order to precisely duplicate the recommended tightening specifications provided with all ARP fasteners.

- Teflon based w/rust & corrosion inhibitors
 - Effective range: -34° to 287°C
 - Sealant range: 10,000 psi
 - Delivers a flexible leak-proof seal in aluminium, steel, stainless steel and plastic
 - Designed for use with bolts
- Thread Sealer (50ml)** **AR100-9904**

Engine Assembly Lube

Our engine assembly lube is the choice of professional engine builders for its superior lubricating properties and its exceptional ability to adhere to internal engine parts until start-up. This white lithium base lubricant is ideal for the ball-socket area of rocker arms and removes with soap and water for easy clean-up.

Description
Engine Assembly Lube 4 oz. (118ml) Jar
Engine Assembly Lube 8 oz. (236ml) Jar

Cam & Lifter Installation Lube

Initial start-up is the most critical time in the life of any new camshaft. COMP Cams has taken great pains to develop what we feel is the best protective break-in lubricant on the market. It must be spread generously on all lobes of the cam, on the faces of the lifters and on the distributor gear when installing a cam. This is the instant protection you need to guard against any premature wear.

Description
Cam & Lifter Lube 4 oz. (118ml) Bottle **CO152**
Cam & Lifter Lube 8 oz. (236ml) Bottle **CO153**

Cam & Lifter Installation Lube: 5/8 oz. Packet

Initial start-up is the most critical time in the life of any camshaft. COMP Cams® Cam & Lifter Installation Lube is the best protective break-in lubricant on the market. Cam & Lifter Installation Lube must be spread generously on all lobes of the cam, on the bottoms of the lifters and on the distributor gear when installing a cam. Cam & Lifter Installation Lube from COMP Cams® provides the instant protection you need to guard against any premature wear. **CO103**

Valve Train Assembly Spray

- Protects valve springs, rockers and pushrods against harmful wear
- Special formula clings to vital valve train components during start-up
- Convenient spray for easy, no-mess application
- Compatible with all petroleum, synthetic and blended engine oils

Valve Train Assembly
Spray 6 oz. (177ml) Aerosol **CO106**

REDLINE ASSEMBLY LUBE

- Prepares potential wear surface and prevents metal contact before adequate lubrication can be supplied
- Unlike other assembly lubes, Red Line's will not plug filters after initial engine start-up
- Provides 3x greater film strength than conventional black Molybdenum Disulfide greases
- Excellent rust and corrosion inhibitor, allows for long-term storage
- For use on camshafts, lifters, pushrods, piston skirts, main and rod bearings, and bolt threads
- Do not use on exhaust bolts or other high temperature bolts which require an anti-seize
- Recommended and used by top camshaft and drivetrain manufacturers Used by many of the best engine builders, engineers, and technicians in Formula 1, GP2, Formula 3, NASCAR, NHRA, and WRC

PIONEER Dry Graphite Lubricant

Pioneer Dry Graphite lubricant is designed for use on frictional engine or mechanical parts prior to their assembly. Some of the many uses include, but are not limited to, crankshafts, camshafts, pistons, cylinder walls, and valve train components.

- Bonds quickly to any clean metal.
- Dry coating does not gather dirt as do grease and oil.
- Protects against corrosion and rust while it lubricates.
- Lubricious graphite crystals permit heavy loads to slide easily.
- Effective temperatures range from -80°F to +1080°F with intermittent use, -80°F to +850°F continuous use.
- Reduces "throw off" for long lasting economical lubrication.
- Will lubricate to loads 18,000 psi.

PI-T-4005-A

CRANE CAMS Engine Assembly Lube

Crane Cams Engine Assembly Lube is specially formulated to provide extra lubrication protection to engine components during assembly, and to provide outstanding resistance to scuffing, wear and friction during critical break-in.

Engine Assembly Lube 4oz (118ml) CR99008-1

Clevite Assembly Lubricant

Clevite 77 Bearing Guard is specially formulated with an extreme pressure rating to provide proper lubrication for internal engine components during assembly and the first crucial moments of operation after engine start-up. It is extra thick and stays where it is put.

Bearing Guard Assembly Lube (237ml) CL2800B2
Bearing Guard Assembly Lube (38ml) CL2800B5

Ultra-Torque Assembly Lube

Because of frictional inconsistencies with oil, moly, and other substances employed by engine builders, when a fastener is tightened to the desired level of torque it typically does not stretch the required amount to reach the proper preload and the torque wrench "clicks" prematurely. It takes multiple cycles of torquing the bolt, loosening it and tightening it again to obtain the required preload. With ARP Ultra-Torque, a fastener need only be torqued once to get within 5% of ideal preload and remains consistent through all subsequent cycles (from race-prep machining through final assembly). Moreover, given the inconsistencies of ordinary lubes, it is quite possible for adjacent head bolts or studs to have vastly different preloads. This "scatter" causes bore distortion, hampers piston ring seal, and leads to poor head gasket sealing. Preload differences in connecting rods and main caps can cause uneven bearing loading.

Product
Ultra-Torque Assembly Lube (0.5 oz. / 15ml) Part # AR100-9908
Ultra-Torque Assembly Lube (1.69 oz. / 50ml) AR100-9909
Ultra-Torque Assembly Lube (1/2 pint / 235ml) AR100-9910
Ultra-Torque Assembly Lube (1 pint / 470ml) AR100-9911

ThreeBond

Sealant - Medium Strength

Welch Plug Sealant.
Welch Plug Sealer (50g Bottle) TB1386B-50

Copper Gasket Cement

VHT Copper Gasket Cement maintains excellent adhesion under severe pressure and heat fluctuations. This high metallic formula assures tight seals on cork, paper and metal gaskets. It also is an excellent seal for threaded fittings and pressure hose connectors.

Copper Gasket Cement VHTSP21

EDELBROCK Gasgacinch

Gasgacinch gasket sealer assures proper sealing of all gaskets used during a manifold installation. It is also effective on water pump, oil pan and valve cover gaskets. Gasgacinch is water and oil resistant and allows easy gasket removal during parts disassembly.

Edelbrock Gasgacinch 4.0 oz. (118ml) ED9300

ENGINE ASSEMBLY GREASE

Recommended by leading camshaft manufacturers, this unique extreme pressure lube dissolves completely in oil without clogging oil passageways or plugging oil filters. Driven to cling to and protect surfaces during initial start-up, Driven Engine Assembly Grease delivers protection you can count on. Apply to cams and lifters for break-in protection. It can also be used on distributor gears, rocker shafts, rocker tips, pushrod tips, wrist pins and valve guides. Combined with BR series break-in oils provides proven protection during break-in.

Engine Assembly Grease 1lb Tub

JGP00728

SPLINE GREASE

A premium extreme pressure grease with greater load carrying and a higher dropping point than traditional lithium greases. EPC delivers exceptional mechanical stability for improved protection.

Designed for high temperature and high load applications.

- Engineered for race applications with sliding spline teeth operating at high temperatures & RPM's: Driven Racing Oil Spline Grease utilizes a high viscosity synthetic base, proprietary anti-wear additives & a Polyurea thickener that is specifically developed to extend durability.
- High viscosity synthetic base stocks create enhanced thermal stability and oxidation resistance, while the robust anti-wear additive package is fortified with Moly for excellent wear protection. Meanwhile, the Polyurea thickener controls oil loss from the grease in extreme temperature environments.

Spline Grease 1/2lb Tub

JGP70070

ThreeBond

Three Bond's RTV silicone sealers contain no acetic acid making them both non-corrosive and totally sensor safe for use in all automotive applications.

Liquid Gasket - High Pressure

Fast curing red/brown RTV silicone sealer with high tolerance to pressure. Ideal for oil pans, thermostats, oil & water pumps, front & rear covers etc.

RTV Gasket Sealer Red/Brown (150g Tube) TB1207C-150

Liquid Gasket - High Temperature

Black RTV silicone sealer with excellent resistance to high temperatures. Use for sealing flanges and surfaces in direct contact with the cylinder head

RTV Gasket Sealer Black (100g Tube) TB1207B-100

Liquid Gasket - High Vibration

High resistance to vibration and frequent temperature cycling. Use for oil pans, chain and crank cases on motorcycle and diesel engines.

Liquid Gasket Sealer M/C White (100g Tube) TB1211-100

Thread Locker & Sealer - High Strength

A high strength anaerobic adhesive and sealant for bolts, studs and screws that do not need to be removed. Equivalent to Loctite 271

Stud And Nut Sealer Green (50g Tube) TB1305-50

Liquid Gasket - Adhesive

Designed to be used in conjunction with a conventional gasket to adhere and enhance sealing non drying.

Gasket Adhesive-Non Dry- Yellow TB1102-200

Liquid Gasket - High Temperature

Black RTV silicone sealer with excellent resistance to high temperatures. Use for sealing flanges and surfaces in direct contact with the cylinder head

RTV Gasket Sealer Black (100g Tube) TB1207B-100

RTV Gasket Sealer Black (340g Cartridge) TB1207B-340

Liquid Gasket - Oil Resistance

Suit Transmission, Oil Resistance Use On Auto & Manual Gearboxes & Differential. Silicone Based

RTV Liquid Gasket Light Grey (250g Tube) TB1215-250

RTV Liquid Gasket Light Grey (330g Cartridge) TB1215-330

Liquid gasket - RTV Silicone

High temp RTV silicone gasket make grey, oil resistance

RTV Silicone Grey (Tube 85g) TBSS1-85

Liquid Gasket - Low Temperature

Elastic, semi-drying synthetic rubber sealer. Suitable for fine gap filling in low temperature applications (-40 to 150°C). Use for joined flange surfaces on oil pans, water outlets, fuel pumps and oil pumps.

Synthetic Rubber Sealer Grey (100g tube) TB1104-100

Ceramic Engine Seal

The best Chemical Sealer you can buy to stop cooling system leaks. Works equally well in aluminium or cast-iron blocks, does not work with antifreeze. Cooling system must be thoroughly clean before use. If this doesn't stop the leaks, find yourself a welder!

Ceramic Engine Seal. 473ml Bottle. MO35500

ALL WEATHER SEAL

- Specially formulated to stop cooling system leaks when antifreeze is present
- Ideal for stopping radiator leaks and sealing cracked blocks in sub-freezing conditions
- Works best when cooling system has been thoroughly cleaned and flushed

All Weather Seal, 1 pint (473ml) plastic bottle MO35520 (Can be used with antifreeze)

A/B Epoxy Port Putty

Easy to use A/B epoxy is a two part epoxy that is great for cylinder head and intake modifications. Simply mix the two parts, apply and let cure. Once cured, it can be sanded to shape, drilled and tapped. Wash hands well after handling. 1 lb. total weight.

A/B Epoxy Port Putty 1 lb (454 grams) ED9290

A/B Epoxy

Two-part bonding product moulds like putty, yet hardens to steel-like consistency. Does not shrink and is not affected by solvents, oils or gasoline. Maximum use temperature of 250°F (120°C) makes it perfect for repairing intake manifolds, cylinder head intake ports, heads and blocks. Can be drilled and tapped when hard. Adheres to almost any clean surface and hardens in 60 min. at 75°F (24°C)

A/B Epoxy, 1 lb.(453g)

MO35560

SUPERCHARGER LUBRICANTS

The DMPE Inc. Supercharger Gel Lube provides a better performing supercharger by addressing Teflon wear and leak path control. While extending Teflon / Nylontron wear through proper lubrication extends supercharger performance longevity, the gel's ability to cling to the rotating rotors and internal parts also increases the efficiency of the unit by filling up the clearance between moving parts. It tightens the seal between rotor to rotor, and end frame to rotor clearance thus allowing the supercharger to increase efficiency by reducing leak paths. This also reduces cost by decreasing time between overhauls. The gel lube is not affected by methanol like many supercharger lubes, therefore provides a better, longer lasting seal. The Gel Lube Remover was specifically manufactured to remove the above lubricant

Supercharger Rotor Gel Lube DM100-99-1886
Supercharger Rotor Gel Remover DM100-99-1887

REDLINE CV-2 GREASE

- Outperforms the best conventional or synthetic greases and lubes
- Withstands extreme temperature and pressure in wheel bearings, U-joints, and high-angle CV Joints
- Excellent high-temp stability, extreme-pressure protection, and water resistance
- Used in a variety of applications with operating temps from -100°F to 500°F
- Strong resistance to oxidation and corrosion, low evaporation and oil separation with a minimum effect on rubber seals
- Contains an organic moly for chassis lubrication and high temp/high speed industrial equipment
- Synthetic fluidity allows increases in bearing life up to 200%
- Will darken after high-temp use-not detrimental to performance
- Used by many of the best engine builders, engineers, and technicians in Formula 1, GP2, Formula 3, NASCAR, NHRA, and WRC

CHAIN LUBE

- Fully synthetic lubricant specially formulated for road and off-road chain driven vehicles, including: O-, X- and Z-ring chains
 - Industry-leading rust and corrosion prevention
 - Resists dirt, sand and grit adhesion
 - Minimal fling-off
 - Reduces wear to extend life of chain and sprocket
 - Protects even in muddy and wet conditions
 - Reduced friction for better power transfer
- Chain Lube - 130Z Aerosole**
RED43103

REDLINE AIR TOOL OIL

- Protects rotary- and piston-type air tools with a light, thin fluid that holds its viscosity while controlling rust, noise and wear
 - As used by Snap-on, Mac, and Cornwell teams in NHRA and NASCAR pit crews
- Description**
Part No.
Air Tool Lube Bottle 12 oz (35)

REDLINE COMPRESSOR OIL

Redline PolyComp 30WT Compressor Oil - 1 quart. Red Line 30W PolyComp Compressor Lubricant is designed to improve compressor efficiency by 5%. This oil provides excellent resistance to carbon formation and lasts up to five times longer than conventional oils.

RED31304

ENGINE BREAK IN OIL

BORN FROM JOE GIBBS RACING
DRIVEN
DRIVEN TO WIN RACING OIL

BR 15W-50 CONVENTIONAL

BREAK-IN OIL

Recommended by multiple cam manufacturers, this unique petroleum oil provides optimum levels of Zinc and Phosphorus for flat tappet and aggressive roller valve trains, and the additive package promotes ring seal. Provides maximum protection available for cams and lifters during initial break-in. Does not require additional ZDDP additives. Good for full power pulls on the dyno, one night of racing or up to 400 miles on the street. Viscosity typical of 15W-50.

BR 15W-50 Conventional Break-In Oil, 946ml
JGP0106

BR-30 5W-30 Conventional Break-In Oil

he same high Zinc and Phosphorus formula as our original break-in oil, now in an SAE 5W-30 viscosity for modern OEM rebuilds and hydraulic lifter engines. Provides excellent ring sealing. Does not require additional ZDDP additives. Good for full power pulls on the dyno, one night of racing or up to 400 miles on the street. Viscosity typical of 5W-30.

BR-30 5W-30 Conventional Break-In Oil, 946ml
JGP01806

COMP Cams Engine Break-in Oil

COMP Cams engine break-in oil is designed for engine builders and performance hobbyists who want that added extra protection in order to maintain engine safety and performance. The engineers at COMP Cams and Endure Performance Lubricants have been working hand-in-hand to develop a full line of automotive lubricants, the first being the ZDDP-enhanced engine break-in oil that provides maximum protection during initial engine break-in. COMP Cams engine break-in oil has been heavily tested and proven by COMP Cams R&D team. This advanced lubricant provides maximum engine life, while also allowing the engine to reach its full performance potential. It does so by improving the surface mating of valvetrain components, rotating assemblies, rod journals, piston rings, valve guides, and other vital areas of the engine. COMP Cams engine break-in oil's proprietary formula includes the optimum amount of critical additives like ZDDP (zinc and phosphorus), molybdenum, detergents, and high-grade base oil. The multi-viscosity, mineral-based COMP Cams engine break-in oil is fully formulated and requires no additives or supplements. It protects all internal engine components, including flat tappet and roller valvetrains, and is mineral-based and fully compatible with gasoline, methanol, and high-octane race fuels.

Motor Oil Break-In Mineral 10W30 (945ml) **C01590**
Motor Oil Break-In Mineral 15W50 (945ml) **C01591**

Engine Break In Oil Additive

- Pour-in added protection for your new or rebuilt engine! • Extend the durability of internal engine components, including camshafts, lifters and all valve train components
- Special blend of extreme pressure additives no longer available in off the shelf motor oils
- Provides added protection during critical engine break-in process
- Compatible with any petroleum, synthetic or blended motor oil

Engine Break In Oil
Additive 12 oz. (355ml) Bottle **C0159**

REDLINE ENGINE OIL BREAK-IN ADDITIVE

- Provides conventional motor oils with anti wear additives like zinc and phosphorus (ZDDP) necessary to protect against camshaft and valve train damage on break-in
- Allow pistons rings to seat properly with less-slick oil, while anti wear additives protect other engines components to avoid excessive wear
- Can also be used in conventional and synthetic oils during regular operation, providing an extra package of protection otherwise not found in most motor oils
- 16oz bottle treats up to 12 quarts of motor oil in many cases, one bottle can serve two engines or oil changes
- Reformulated for improved frictional properties
- Special detergents for improved lubricity and less detonation
- Polyol ester base stocks provide more stability and film strength when exposed to excess fuel dilution
- Each of these products has no less than 2200ppm of zinc and phosphorus for anti wear
- Each race oil product is a multi-grade, offering 2-4% more power than oil of a similar viscosity - 20WT is a 5W20, 30WT is a 10W30, 40WT is a 15W40, 50WT is a 15W50
- Improved protection at startup, lower oil temp, cleanliness
- Remember to change these oils more frequently than regular motor oils

TRANSMISSION OILS

REDLINE D4 MANUAL & ATF TRANSMISSION FLUID

- D4 ATF is a fully-synthetic product designed with superior low-temperature properties compared to a Dexron III fluid, and the improved shear-stability requirements which is part of the Mercon V specifications. D4 ATF also provides a GL-4 level of gear protection, making it a superior product for transmissions and transaxles. The balanced frictional characteristics provides smooth and consistent shifts for extended drain intervals. The superior stability compared to petroleum ATFs allows high-temperature operation without varnishing valves and clutches which leads to transmission failure.
- Our most versatile ATF, use where Dexron III, Dexron II, Mercon and Mercon V fluids are recommended, provides a GL-4 level of gear protection
 - Popular applications: Toyota Type T-III and T-IV, Honda ATF-Z1, NissanMatic D, J & K, Diamond SP-II, SP-III, Mazda ATF M-V, most BMW, Audi, VW automatic transmissions
 - Also used with manual transmissions and transaxles like T-5, T-45, T-56 and late-model BMW
 - Excellent cold weather operation
 - Appropriate coefficient of friction for most manual transmission synchronizers (other's synthetic gear oils are often too slippery for proper synchro engagement)
 - Red Line offers lubricants to pinpoint nearly every transmission application
 - MTL, MT-85 & MT-90 are not for use in differentials with hypoid gears
 - Excellent gear and synchro protection, balanced slipperiness for easier shifting in cold climates
 - Excellent for high- and low-mile transmissions
 - Compatible with petroleum and other synthetics
- Description**
D4 Manual & ATF Trans Fluid 1 Quart (946 ml)
D4 Manual & STF Trans Fluid 1 Gallon (3.785 Liters)

REDLINE MANUAL

TRANSMISSION OIL 70W/75W

- Popular in Toyota/Lexus LF 75W, BMW X-Drive and other transfer cases transfer cases calling for Shell TF0870
- Recommended for Mercedes 235.10, Dodge/Fiat BOT 350 M3, GM BOT 303 mod, Toyota/Scion Manual Transmissions Gear Oil LV, VW/Audi and BOT270A Graziano Transaxle for Aston Martin, Audi & Lamborghini.
- Offers quicker shifts, a perfect synchronizer coefficient of friction
- Safe for brass synchros, as it lacks the reactive sulfurs found in most GL-5 oils that cause damage
- High performance gear protection and longer synchro life
- Eliminates notchy shifting, even when cold
- Low fluid friction to improve power transfer
- Satisfies the gear oil viscosity requirements of 70W & 75W
- Recommended for GL-1, GL-3 and GL-4 applications as well as where most special synchromesh fluids are specified

REDLINE MANUAL TRANSMISSION OIL 75W85

- Recommended for Nissan 350Z and 370Z (also most Maxima, Altima & Sentra), Mitsubishi Evolution, Hyundai, Kia and Quafie synchro manual trans applications
- Many NV4500 truck transmission applications like Chevy Silverado and Dodge Ram, for Chrysler spec MS-9070
- Safe for brass synchros, as it lacks the reactive sulfurs found in most GL-5 oils that cause damage
- Offers quicker shifts, perfect synchronizer coefficient of friction
- Eliminates notchy shifting, even when cold
- High performance gear protection and longer synchro life
- Recommended for GL-1, GL-3 and GL-4 applications as well as where most special synchromesh fluids are specified
- Satisfies the gear oil viscosity requirements of 75W, 80W, 85W and motor oil viscosities of SAE 30 and 5W30

TRANSMISSION OIL 75W90

- 75W90 GL-4 gear oil (similar to SAE 5W40/10W40 engine oil viscosity)
- Popular in Nissan, Mazda, Mitsubishi, VW/Audi, Lotus Elise/Exige, Toyota
- Offers quicker shifts, perfect synchronizer coefficient of friction
- Safe for brass synchros, as it lacks the reactive sulfurs found in most GL-5 oils that cause damage
- High performance gear protection and longer synchro life
- Eliminates notchy shifting, even when cold
- Satisfies the gear oil viscosity requirements of 75W, 80W and motor oil viscosities of SAE 40, 10W40, and 15W40
- Recommended for GL-1, GL-3, and GL-4 applications, as well as where most special synchromesh fluids are specified
- Appropriate coefficient of friction for most manual transmission synchronizers (other's synthetic gear oils are often too slippery for proper synchro engagement)
- Red Line offers lubricants to pinpoint nearly every transmission application • MTL, MT-85 & MT-90 are not for use in differentials with hypoid gears • Excellent gear and synchro protection, balanced slipperiness for easier shifting in cold climates
- Excellent for high- and low-mile transmissions
- Compatible with petroleum and other synthetics

REDLINE SHOCK PROOF DIFFERENTIAL

& TRANSMISSION OIL

- Film thickness greater than an SAE 75W250, yet low fluid friction like 75W90
- For heavily-loaded racing differentials and transmissions, problem gearboxes
- Many performance racing applications like Sprint/Midget/Dirt Late Model Differentials, Detroit Lockers and spools, NHRA Top Fuel and Funny Car rear ends
- Not recommended for most synchro applications due to the product's extreme slipperinessFully-synthetic formulas created from polyol ester base stocks, offer excellent lubrication under extreme conditions
- High viscosity-index (VI) to provide relatively constant viscosity and film thickness with varying temperature change
- Ester base stocks and friction modifiers provide additional slipperiness to lower operating temperatures by reducing the sliding friction in hypoid gears • Superior shear stability and reduced oxidation compared to other synthetics and conventional gear oils • Exceed API GL-5 specifications
- Engineered to provide the highest degree of protection and improvement of differential efficiency for better mileage, longer drain intervals, and less wear

REDLINE D6 ATF

- Our lowest viscosity, most shear-stable ATF for consistent operation
- Designed to satisfy Dexron-VI®, Dexron-III®, Mercon®SP, Mercon®LV, Honda DW-1, Toyota WS, Mercedes Benz NAG-2, ZF-LG 6, 6+ and 8 fluids
- Also satisfies API 70W/75W/80W and GL-4 gear oil requirements
- Red Line offers the widest selection of fully-synthetic ATF on the market today
- Each offer improved thermal stability, maintain viscosity levels, and feature lower volatility while providing the required frictional characteristics of each fluid's OEM-style replacement
- Reduced oxidation and lower volatility at high temperature
- Allows high-temp operation without varnishing valves and clutches
- Extended drain intervals

REDLINE FULL SYNTHETIC RACING ATF

- RED LINE LIGHTWEIGHT RACING ATF is a fully-synthetic formula designed specifically for use in drag racing automatic transmissions that need the positive shift of a Type-F automatic transmission fluid, yet require ultimate consistency. This ATF contains no slipperiness additives, producing faster shifts and quicker lock-up and can reduce elapsed time in drag racing. Compared to RED LINE RACING ATF, this product maintains a comparably thin viscosity to minimize heat buildup and reduce changes in fluid thickness between rounds. This product is designed for use where Type-F, Dexron, and Mercon fluids are recommended in both bracket and heads-up drag racing transmissions.
- Superior consistency and wear protection for Bracket and Heads-Up drag racing transmissions like Powerglide and Turbo 400
 - Popular with turbo and blown doorslammers like NMRA, NMCA, ORSCA, and PSCA -- replaces hydraulic oils and other non-ATFs used to escape heat issues
 - Low viscosity offers less frictional drag for quicker ETs and more MPH
 - Dissipates heat for longer trans life, better clutch, gear, and seal life
 - Compatible with petroleum ATFs and other brands synthetic ATF
 - Extreme-pressure protection provides much better film-strength

Description

REDLINE NS MANUAL TRANS & TRANSAXLE GEAR OIL 75W90

- Designed for transmissions and transaxes - helps to slow synchros for easier shifting across a broad temperature range
- Popular in Ferrari, Porsche and Subaru transaxes
- Muscle car applications like Ford Top Loader, Borg-Warner T-10 and Super T-10, and Muncie transmissions
- Contains extreme pressure additives like our 75W90 GL-5 oil, but lacks friction modifiers to balance slipperiness
- Improved copper corrosion protection to prolong synchro life
- Helps with lock-up on weak limited-slip differentials-compatible with Red Line Limited Slip Friction Modifier for tuning slippage
- Also used with clutch-type LSDs in racing for maximum lock up
- Recommended for API GL-5, GL-6, MT-1, MIL-L-2105E and SAE J2360
- Appropriate coefficient of friction for most manual transmission synchronizers (other's synthetic gear oils are often too slippery for proper synchro engagement)
- Red Line offers lubricants to pinpoint nearly every transmission application
- MTL, MT-85 & MT-90 are not for use in differentials with hypoid gears
- Excellent gear and synchro protection, balanced slipperiness for easier shifting in cold climates
- Excellent for high- and low-mile transmissions
- Compatible with petroleum and other synthetics

Non Slip Manual Trans & Transaxle Gear Oil 75W90 (3.785 Liters)

RED58305

REDLINE RACING ATF (TYPE F)

- Similar to a Type F fluid, featuring even higher viscosity and no friction modifiers
- Produces faster shifts, quicker lock-up, better converter efficiency at high temps
- Enhanced extreme-pressure additives provide 5-times better film strength than petroleum ATFs
- Reduced clutch and gear wear compared to petroleum ATFs
- Satisfies GL-4 gear oil requirements
- Red Line offers the widest selection of fully-synthetic ATF on the market today
- Each offer improved thermal stability, maintain viscosity levels, and feature lower volatility while providing the required frictional characteristics of each fluid's OEM-style replacement
- Reduced oxidation and lower volatility at high temperature
- Allows high-temp operation without varnishing valves and clutches
- Extended drain intervals

High-Temp ATF (Type F) Racing Fluid (3.785 Liters) RED30305

Trick Shift ATF

- Trick Shift was originally developed by B&M for racing applications. It's become so successful that it's the most popular high performance fluid on the street also. Not an additive, this is the best performance ATF available. A scientific blend of foam inhibitors, pressure agents and shift modifiers that will provide extended transmission life and drastically improved shift feel. It can be mixed with stock-type transmission fluids, however to attain maximum improvement you should use Trick Shift exclusively. Ideal for towing, light trucks and RV applications as well as racing.
- *Not recommended for electronic controlled transmissions.

Trick Shift ATF Fluid (945ml) BM80259

Hot Shift Auto Trans Fluid

- Hurst hot shift synthetic automatic transmission fluid combines friction modifiers, extreme pressure additives and anti-foaming agents to increase clutch plate lock-up, resulting in quicker, firmer and more positive shifts. This fluid is ideal for use in passenger cars, high performance street and race cars, light trucks, off-road and recreational vehicles. Mixes well with and meets requirements of Mercon and Dexron III.

Hurst Hot Shift ATF Fluid - 1 Quart (946ml) HU180200

DIFFERENTIAL & GEAR OILS

REDLINE DIFFERENTIAL OIL 75W140 SUIT OLDER CARS

- Recommended for API GL-5, GL-6, MT-1, MIL-L-2105E, and SAE J2360
- Contains additional friction modifiers for suitability with clutch-type limited slip differentials - for most LSDs, no additional friction modifiers are required
- This product is not designed for use in manual transmission or transaxes with synchronizers, as its slipperiness may lead to shifting problems
- Popular in stock car racing differentials and transmissions
- Fully-synthetic formulas created from polyol ester base stocks, offer excellent lubrication under extreme conditions
- High viscosity-index (VI) to provide relatively constant viscosity and film thickness with varying temperature change
- Ester base stocks and friction modifiers provide additional slipperiness to lower operating temperatures by reducing the sliding friction in hypoid gears
- Superior shear stability and reduced oxidation compared to other synthetics and conventional gear oils
- Exceed API GL-5 specifications
- Engineered to provide the highest degree of protection and improvement of differential efficiency for better mileage, longer drain intervals, and less wear

RED57914

REDLINE DIFFERENTIAL GEAR OIL 80W140

- Recommended for API GL-5, GL-6, MT-1, MIL-L-2105E, and SAE J2360
- Contains additional friction modifiers for suitability with clutch-type limited slip differentials - for most LSDs, no additional friction modifiers are required
- This product is not designed for use in manual transmission or transaxes with synchronizers, as its slipperiness may lead to shifting problems
- Popular in stock car racing differentials and transmissions
- Fully-synthetic formulas created from polyol ester base stocks, offer excellent lubrication under extreme conditions
- High viscosity-index (VI) to provide relatively constant viscosity and film thickness with varying temperature change
- Ester base stocks and friction modifiers provide additional slipperiness to lower operating temperatures by reducing the sliding friction in hypoid gears
- Superior shear stability and reduced oxidation compared to other synthetics and conventional gear oils
- Exceed API GL-5 specifications
- Engineered to provide the highest degree of protection and improvement of differential efficiency for better mileage, longer drain intervals, and less wear

Description

80W140 GL-5 Gear Oil 1 Quart (946 ml)
80W140 GL-5 Gear Oil 1 Gallon (3.78 L)

Part No
RED58104
RED58105

MTL 70W80 GL-4 Gear Oil

- Popular for BMW, Honda and Acura, Ford Focus, late-model Mini Cooper, Land Rover/Range Rover L777S, Dodge & Jeep NV1500, NV3500, NV3550 and NV5600 truck transmissions
- Popular replacement for and improvement over GM Synchronmesh® (#12345349) and Auto-Trak II® (#12378508) and Chrysler spec MS-9224

- Safe for brass synchros, as it lacks the reactive sulfurs found in most GL-5 oils that cause damage
- Offers quicker shifts, perfect synchronizer coefficient of friction
- Eliminates notchy shifting, even when cold
- High performance gear protection and longer synchro life
- Satisfies the gear oil viscosity requirements of 75W, 80W, and motor oil viscosities of SAE 30, 10W30, and 5W30
- Recommended for GL-1, GL-3, and GL-4 applications as well as where most special synchromesh fluids are specified
- Appropriate coefficient of friction for most manual transmission synchronizers (other's synthetic gear oils are often too slippery for proper synchro engagement)
- Red Line offers lubricants to pinpoint nearly every transmission application
- MTL, MT-85 & MT-90 are not for use in differentials with hypoid gears
- Excellent gear and synchro protection, balanced slipperiness for easier shifting in cold climates
- Excellent for high- and low-mile transmissions
- Compatible with petroleum and other synthetics

Description	Part No
70W80 Manual Trans & Transaxle Gear Oil (946 ml)	RED50204
70W80 Manual Trans & Transaxle Gear Oil (3.785 Liters)	RED50205

REDLINE SUPERLIGHT

LIGHT SHOCKPROOF GEAR OIL

- Film thickness greater than an SAE 75W90, yet low fluid friction like ATF
- Used in low-power dog-ring racing transaxles with moderate to low load, qualifying, etc.
- Popular in British F3, Euro F3 and Star Mazda racing gearboxes for ultra low drag
- Unique lubricant with solid microscopic particles offers low drag/high protection
- Relatively low viscosity, yet cushions gear teeth under extreme pressure
- Helps to prevent tooth breakage, resists throw-off
- Avoid use with pumps, coolers, and filters as unique medium and affinity for metal can cause clogging
- Designed for wet sump transmissions and differentials with splash lubrication

Description	Part No
Superlight Light Shockproof Gear Oil (946 ml)	RED58504
Superlight Light Shockproof Gear Oil (3.785 Liters)	RED58505

REDLINE LIGHTWEIGHT

SHOCKPROOF GEAR OIL

- Film thickness greater than an SAE 75W140, yet low fluid friction like 80W gear oil or 30W motor oil
- Excellent low-temp flow, improved cold shifting
- For racing differentials under moderate loads
- Popular in racing transmissions like Hewland and other Road Racing dog-ring boxes, Bert and Brinn for Stock Cars, G-Force, and Liberty clutchless for Drag Racing
- Unique lubricant with solid microscopic particles offers low drag/high protection
- Relatively low viscosity, yet cushions gear teeth under extreme pressure
- Helps to prevent tooth breakage, resists throw-off
- Avoid use with pumps, coolers, and filters as unique medium and affinity for metal can cause clogging
- Designed for wet sump transmissions and differentials with splash lubrication

Description	Part No
Lightweight ShockProof Gear Oil (946 ml)	RED58404
Lightweight ShockProof Gear Oil (19.00 Liters)	RED58406

REDLINE LIGHTWEIGHT

SHOCK PROOF DIFFERENTIAL & TRANSMISSION OIL

- Film thickness greater than an SAE 75W140, yet low fluid friction like 80W gear oil or 30W motor oil
- Excellent low-temp flow, improved cold shifting
- For racing differentials under moderate loads
- Popular in racing transmissions like Hewland and other Road Racing dog-ring boxes, Bert and Brinn for Stock Cars, G-Force, and Liberty clutchless for Drag Racing
- Unique lubricant with solid microscopic particles offers low drag/high protection
- Relatively low viscosity, yet cushions gear teeth under extreme pressure
- Helps to prevent tooth breakage, resists throw-off
- Avoid use with pumps, coolers, and filters as unique medium and affinity for metal can cause clogging
- Designed for wet sump transmissions and differentials with splash lubrication

Description	Part No
Lightweight Shock Proof Gear Oil 1 Gallon (3.785 Liters)	RED58405

REDLINE LIMITED SLIP FRICTION MODIFIER

- Compatible with both petroleum and synthetic gear oils
- Reduces break-in temps as much as 50°F
- Add 1oz at a time to clutch-type limited slip or posi-traction units to eliminate chatter
- Fully-synthetic formulas created from polyolester base stocks, offer excellent lubrication under extreme conditions
- High viscosity-index (VI) to provide relatively constant viscosity and film thickness with varying temperature change
- Ester base stocks and friction modifiers provide additional slipperiness to lower operating temperatures by reducing the sliding friction in hypoid gears
- Superior shear stability and reduced oxidation compared to other synthetics and conventional gear oils
- Exceed API GL-5 specifications
- Engineered to provide the highest degree of protection and improvement of differential efficiency for better mileage, longer drain intervals, and less wear

Limited Slip Friction Modifier (118 ml) **RED80301**

SUSPENSION OILS & FLUIDS

REDLINE SUSPENSION OIL

- These products can be mixed together to create intermediate viscosities, customized for a dampener's particular characteristics
- Superior shear stability over most popular shock oils
- Allows use of lower viscosities
- Far less shock fade, provides lower operating temps for same viscosity when compared to conventional fluids
- Eliminates most foaming and provides excellent seal lubricity
- All Red Line suspension fluids can be blended to create intermediate viscosities
- LikeWater® provides the least viscosity change of any suspension fluid on the market
- LightWeight is often used in Sprint Car racing, as well as in CORR and SCORE Off Road competition
- Antiwear additives assist in longer shock life

LIKewater SUSPENSION FLUID

- Provides the least viscosity change of any commercial suspension fluid and will operate unchanged longer than other suspension fluids
- Often used by NASCAR, Indy CAR and ARCA teams in Superspeedway suspension setups

Likewater Suspension Fluid 16 oz (473 ml) **RED91102**

EXTRALIGHT 2.5WT SUSPENSION FLUID

- Popular in NASCAR's professional categories, motocross and road racing, where top engineers try to run the lightest fluid possible that maintains its viscosity and stability
- Many motocross tuners use it as a direct replacement in the front forks on Showa and Kayaba forks, with or without revalving
- Also used in road racing and circle track as a direct replacement for Penske's 2.5wt Silkolene® fluid
- Extralight-2.5wt is very popular in NASCAR, as well as AMA Motocross

Extralight 2.5WT Suspension Fluid 16 oz (473 ml) **RED91112**

LIGHTWEIGHT 5WT SUSPENSION FLUID

- Popular as a direct, yet more stable replacement for most 7wt OE suspension fluids
- Used by motorcycle technicians as a most stable replacement in Showa and Kayaba front forks that have not been revalved
- Often used in Sprint Car racing, as well as in CORR and SCORE Off Road competition

Lightweight 5WT Suspension Fluid 16 oz (473 ml) **RED91122**

MEDIUM 10WT SUSPENSION FLUID

- More stable replacement fluid for twin-tube racing shock absorbers like Pro Shocks, Carrera and QA1.

Medium 5WT Suspension Fluid 16 oz (473 ml) **RED91132**
Medium 5WT Suspension Fluid 1 Gallon (3.785 Liters) **RED91135**

HEAVYWEIGHT 30WT SUSPENSION FLUID

- Used in many Harley-Davidson and American V-Twin motorcycle forks and rear shocks that have not been revalved

Heavyweight 5WT Suspension Fluid 16 oz (473 ml) **RED91142**
Heavyweight 5WT Suspension Fluid 1 Gallon (3.785 Liters) **RED91145**

ENGINE OIL

BORN FROM JOE GIBBS RACING

DRIVEN
DRIVEN TO WIN RACING OIL®

XP4 15W-50 CONVENTIONAL RACING OIL

High Zinc, Petroleum formula racing oil, XP4 offers low-cost protection for racers who want to use non-synthetic oil. Excellent protection for dirt and nitrous racers who need to change their oil frequently. Recommended applications include big block, flat tappet camshaft, nitrous and alcohol fuelled drag engines. Viscosity typical of 15W-50.

XP4 15W-50 Conventional Racing Oil 946ml **JGP00506**

XP5 & XP7 RACING OIL

XP5 Racing Oil - A semi-synthetic based on our original formula race oil, XP5 offers improved high temperature shear and oxidation stability compared to mineral oil without the higher cost of a full synthetic. Viscosity typical of SAE 20W-50.

XP7 Racing Oil - A semi-synthetic 10W-40 racing oil based on our proven XP5 racing oil. Ideal for desert and off-road engines, IMCA modified engines, spec engines, flat tappet camshafts and hydraulic lifter engines. Designed for clearances under .0030". Viscosity typical of 10W-40.

XP5 Racing Oil, 20W-50, 946ml **JGP00906**

XP7 Racing Oil, 10W-40, 946ml **JGP01706**

HR1 & HR5 STREET OIL

HR1 Street Oil - Excellent protection for supercharged, big block and looser clearance engines. Ideal for long stroke and/or high compression engines. Safe for O2 sensors and vehicles equipped with catalytic converters. Feature's storage protection additives that guard against rust and corrosion during winter storage. No ZDDP or additives required. Viscosity typical of 15W-50.

HR5 Street Oil - Well suited for a variety of hot rods and vintage vehicles and is appropriate to use in any engine that calls for a 10W-40 grade motor oil. Feature's storage protection additives that guard against rust and corrosion during winter storage. This oil is an excellent choice for muscle cars and rotary engines. No ZDDP or additives required. Viscosity typical of 10W-40.

HR1 Street Oil, 15W-50, 946ml **JGP02106**

HR5 Street Oil, 10W-40, 946ml **JGP03806**

REDLINE PROFESSIONAL-SERIES EURO MOTOR OIL

- FULL SYNTHETIC -- OEM-required Group III/Group IV PAO Base Stocks
- Lower volatility for reduced oil consumption
- Long-life certification for improved wear protection following factory drain intervals
- For high- and low-mileage engines
- Compatible with conventional and synthetic oils
- Withstands extreme temperatures
- OEM-approved Red Line products, for gasoline and small Diesel engines.

Description	Part No.

REDLINE SYNTHETIC

STREET OIL

Produced in only one top-of-the-line grade, these products offer the highest quality available on the market today and in the widest variety of viscosity

- Fully-synthetic ester formula for passenger cars, light trucks, performance vehicles and marine applications
- Excellent wear protection and friction reduction across a wide range of operating conditions
- High detergency allows extended drain intervals and provides increased cleanliness
- Improved fuel economy and ring seal for more power
- Superior high temperature stability and oxidation resistance increases lubrication of hot metal compared to other synthetics
- High natural viscosity index (VI) provides thicker oil film in bearings and cams
- Less evaporation than other synthetics for improved efficiency and ring seal

All products are completely compatible with other conventional and synthetic motor oils

Street Synthetic Motor Oil (0W40)

Street Synthetic Diesel Motor Oil (15W40)

15W40 Street Diesel Oil 1 Gallon (3.785 Liters)

REDLINE RACING OIL

Racing oils provide more wear protection than motor oils for passenger vehicles, however, these products contain fewer detergents and are not suitable for street use

- Reformulated for improved frictional properties
- Special detergents for improved lubricity and less detonation
- Polyol ester base stocks provide more stability and film strength when exposed to excess fuel dilution
- Each of these products has no less than 2200ppm of zinc and phosphorus for antiwear
- Each race oil product is a multi-grade, offering 2-4% more power than oil of a similar viscosity - 20WT is a 5W20, 30WT is a 10W30, 40WT is a 15W40, 50WT is a 15W50
- Improved protection at startup, lower oil temp, cleanliness
- Remember to change these oils more frequently than regular motor oils

REDLINE 2-STROKE ALL SPORT OIL

- Low-cost biodegradable product
- Designed for engines which require a low-ash oil
- Not for use where TC-W oils are recommended
- Up to 3% more power and significantly better bearing life antiscuff additives to prevent ring sticking, cleaner piston and exhaust ports
- Contain ester base oils with the highest film strength and affinity for hot metal
- Increased power and excellent scuff protection
- Provides the lubricating qualities of castors, but with exceptional cleanliness
- Low carbon residue dramatically reduces plug fouling and smoke
- Compatible with reformulated fuels
- Each product works in both premix or injection systems

All Sport 2-Stroke Oil 16 oz (473 ml)

Part No.
RED40803

REDLINE V-TWIN 20W50 POWERPACK

- Complete kit for motorcycles equipped with Evolution®, Milwaukee-Eight® and Twin-Cam engines*
- 2007-up H-D® motorcycle with the 96-inch and larger Twin Cam engines, users must purchase one extra bottle of Primary Chain Case Oil to meet this engine's 38 oz (45 oz dry) capacity, compared to the 32 oz wet capacity of a Milwaukee-Eight, Evolution or V-Twin case
- Includes 5 quarts of 20W50 Motorcycle Oil, 1 quart of V-Twin Transmission Oil with ShockProof, 1 quart of Primary Chain Case Oil, 1 bottle of Fuel Injection Cleaner for Powersports, a sticker kit, a Red Line Oil embroidered hat and a versatile funnel
- Each kit has been tested for compatibility and includes enough fluids for a complete oil change*
- Users must check vehicle specifications for capacity to ensure against overfilling, as full quarts may provide more product than necessary

REDLINE V-TWIN 20W60HD POWERPACK

- Complete kit specific to motorcycles with Flathead, Knucklehead, Shovelhead and Panhead engines as well as V-Twins operated in hot climates or with wide clearances
- *2007-up H-D® motorcycle with the 96-inch and larger Twin Cam engines, users must purchase one extra bottle of Primary Chain Case Oil to meet this engine's 38 oz (45 oz dry) capacity, compared to the 32 oz wet capacity of a Milwaukee-Eight, Evolution or V-Twin case
- Includes 5 quarts of 20W60 Motorcycle Oil, 1 quart of V-Twin Transmission Oil with ShockProof, 1 quart of Primary Chain Case Oil, 1 bottle of Fuel Injection Cleaner for Powersports, a sticker kit, a Red Line Oil embroidered hat and a versatile funnel
- Each kit has been tested for compatibility and includes enough fluids for a complete oil change
- Users must check vehicle specifications for capacity to ensure against overfilling, as full quarts may provide more product than necessary

REDLINE V-TWIN TRANSMISSION OIL WITH SHOCKPROOF

- This product dampens transmission noise (reducing the notorious shifting clunk found in these gearboxes), dramatically reduces temperature, provides thicker oil films between gear teeth and resists throw-off
- For all aftermarket versions like Baker, JIMS, S&S, etc.
- For all H-D® trans including with Evolution engines, Twin Cam engines, and latest 6-speed Cruise Drive
- Same fluid as our unique Heavy ShockProof® Gear Oil
- Motor oils and gear oils are specifically engineered for the latest high-revving four-stroke motocross bikes and ATVs, Sportbikes, and V-Twins
- Each gear oil product reduces the thinning effect from high temperatures
- Motor oils are packed with higher levels of anti-wear chemistry like zinc and phosphorus
- Special friction modifiers in our motor oils better wet-clutch operation
- A variety of Two-Stroke oils to meet the NMMA TC-W3 regulations where required

Description

V-Twin Transmission Oil With Shockproof (946 ml)

Part No.
RED42804

MOTORCYCLE & KARTING

REDLINE 2-STROKE ALCOHOL OIL

Mixes with alcohol and/or nitromethane for karting, model airplanes, etc.

- Excellent cleanliness, lubrication and scuff protection -- use at leaner ratios than with a gasoline two-stroke product
- Contain ester base oils with the highest film strength and affinity for hot metal
- Increased power and excellent scuff protection

- Provides the lubricating qualities of castors, but with exceptional cleanliness
- Low carbon residue dramatically reduces plug fouling and smoke
- Compatible with reformulated fuels
- Each product works in both premix or injection systems

Part No.

REDLINE TWO-STROKE WATERCRAFT

INJECTION OIL

Ash-less, biodegradable lubricant for outboards, personal watercraft, etc.

- For use where NMMA TC-W3 lubricants are recommended
- More power, scuff and bearing protection than petroleum and other synthetics
- Contain ester base oils with the highest film strength and affinity for hot metal
- Increased power and excellent scuff protection
- Provides the lubricating qualities of castors, but with exceptional cleanliness
- Low carbon residue dramatically reduces plug fouling and smoke
- Compatible with reformulated fuels
- Each product works in both premix or injection systems

Description
Two-Stroke Watercraft Injection Oil (3.785 Liters)

Part No.
RED40705

REDLINE 2-STROKE SMOKELESS OIL

Smoke is virtually non-existent with this blend

- For improved power other Red Line products would be superior
- Not for use where NMMA TC-W3 lubricants are recommended
- Contain ester base oils with the highest film strength and affinity for hot metal
- Increased power and excellent scuff protection
- Provides the lubricating qualities of castors, but with exceptional cleanliness
- Low carbon residue dramatically reduces plug fouling and smoke
- Compatible with reformulated fuels
- Each product works in both premix or injection systems

REDLINE 2-STROKE RACING OIL

Ultimate in two-cycle performance, extreme cleanliness

- Popular in racing and daily applications like motorcycles, marine, snowmobile racing, etc.
- Dyno proven for gains of 3-5% and more power over longer runs
- High-temp stability prevents deposits on combustion chambers, exhaust ports, upper ring, and piston crown
- Suggested use at 50:1, but useful up to 100:1 depending on operating conditions
- Chemistry in Two-Cycle Kart Oil and Two-Stroke Race Oil are identical, with different labels
- Contain ester base oils with the highest film strength and affinity for hot metal
- Increased power and excellent scuff protection
- Provides the lubricating qualities of castors, but with exceptional cleanliness
- Low carbon residue dramatically reduces plug fouling and smoke
- Compatible with reformulated fuels
- Each product works in both premix or injection systems

REDLINE V-TWIN PRIMARY CASE OIL

- For 1984-to-present V-Twin American motorcycle engines, including Evolution, Twin Cam, and aftermarket engines of similar design
- Same fluid as our famous MTL gear oil
- Improves clutch operation while reducing wear and temperature
- Where most synthetics are too slippery for clutch operation, this friction-balanced product is balanced to provide less slip, smoother operation, and helps to apply more power in modified engines
- This product is for use in the primary chaincase with wet-diaphragm spring clutches. • Motor oils and gear oils are specifically engineered for the latest high-revving four-stroke motocross bikes and ATVs, Sportbikes, and V-Twins • Each gear oil product reduces the thinning effect from high temperatures • Motor oils are packed with higher levels of anti-wear chemistry like zinc and phosphorus • Special friction modifiers in our motor oils better wet-clutch operation
- A variety of Two-Stroke oils to meet the NMMA TC-W3 regulations where required

Description
V-Twin Primary Case Oil (946 ml)

Part No.
RED42904

REDLINE 20W60 MOTORCYCLE OIL

- Recommended for V-twins that need more viscosity due to operation in extremely hot climates
- Popular for Evos and Twin Cam engines with big bore kits, stroker kits or issues with valvetrain noise
- Specifically blended for air-cooled V-Twin engines with traditionally wide clearances like Knuclieheads, Shovelheads and Panheads engines
- Superior film strength through the use of ester base stocks for protection and ring seal
- Extended drain intervals over other brands due to higher quality base stocks and excellent dispersants

80W MOTORCYCLE GEAR OIL WITH SHOCKPROOF

- Popular for 65cc, 85cc, 125cc and 250cc two stroke motocross transmissions, as well as shifter kart gearboxes and CRF transmission cases
- ShockProof® features microscopic solid medium to provide cushioning between gear teeth, while maintaining lower drag
- Provides consistent shifting and wet-clutch operation

80W Motorcycle Gear Oil with Shockproof
RED42704

REDLINE 10W30 MOTORCYCLE OIL

- For use where this viscosity is specifically recommended, like many Kawasaki KX 250F and various Hondas from 2006-up
- Superior film strength through the use of ester base stocks for protection and ring seal
- Extended drain intervals over other brands due to higher quality basestocks and excellent dispersants
- Blended with specific friction modifiers that are compatible with wet-clutches, suitable for JASO MA applications
- Motor oils and gear oils are specifically engineered for the latest high-revving four-stroke motocross bikes and ATVs, Sportbikes, and V-Twins
- Each gear oil product reduces the thinning effect from high temperatures
- Motor oils are packed with higher levels of anti-wear chemistry like zinc and phosphorus
- Special friction modifiers in our motor oils better wet-clutch operation
- A variety of Two-Stroke oils to meet the NMMA TC-W3 regulations where required

POWER STEERING FLUID

Power Steering Fluid

- Anti-wear additives protect pump & increase performance • Special additives reduce fluid aeration during pump use • Oil stability reduces heat in the power steering system • Corrosion inhibitors & detergent additives minimize oxidation & development of sludge & gum
- For use with all power steering applications.

Description
1 Quart

Part #
AFC36901

REDLINE POWER STEERING FLUID

- RED LINE POWER STEERING FLUID satisfies the service fill requirements of most auto manufacturers and can be used where the manufacturer calls for any automatic transmission fluid such as Dexron, Dexron II-D, II-E, or Dexron III, Ford Type-F, Mercon, or M2C138-CJ such as required by Ford, AMC, Toyota, Nissan, Lexus, Infiniti, Jaguar, VW, Mercedes-Benz, BMW, SAAB, Subaru, Volvo, Porsche, Mitsubishi, Mazda, and many others. This fluid also satisfies power steering units requiring GM PN 1050017 or 1052884 (Spec Number 9985010), Chrysler Spec Number 5931, and Ford Spec Number M2C33-F. It also satisfies the hydraulic specifications of Denison HF-O, Vickers vane pumps, and Sundstrand piston pumps. • Improved wear protection, resists thermal breakdown, evaporation and foaming • Provides continued high pump output, suitable for most power steering units
- Lightweight fluid avoids power losses • 50% greater high-temp viscosity and 1/5 of the high-temp evaporation • Greater heat resistance helps to prevent boil-over • Helps to prevent high-temp steering fade and difficult effort steering at low temps • Compatible with petroleum and synthetics • 1/4 of the oxidation of petroleum power steering fluids • Helps prevent leakage and squealing

Description
Power Steering Fluid 1 Quart (946 ml)
(Alternative To Most Dexron & Typr-F & Mercon Fluids)

COOLANT ADDITIVES

VP Cool Down

- Reduces cooling system operating temperatures by up to 25°C. Works great in high-performance radiator systems, towing vehicles, and long idling applications. Reduces coolant surface tension, allowing better laminar coolant flow for better heat transfer. Lubricates without the crystallization of other coolant additives. Treats 12 litres of water.

Cool Down VPCOOL

STAY FROSTY

High Performance

- Ready-to-Use Premix High-Performance Engine Coolant
- Contains Wetting Agents for Better Cooling
- Non-Toxic Propylene Glycol Freeze Protection
- Reduces Cylinder Head Temps By Up To 25°F
- Maximizes Horsepower and Torque
- Protects all metals from corrosion/electrolysis, including aluminum
- Prevents scales/deposits that reduce heat transfer

VP-STAYFROSTY-H4 3.78L (1 Gallon)

STAY FROSTY Race

- Formulated for high-compression, high-heat racing engines. It contains a specialized blend of wetting agents that drastically improve coolant's ability to transfer heat away from high temperature cylinder heads. Temperatures of engines are reduced by up to 100° F compared to conventional glycol-based coolant.

- Ready-to-Use – Just Pour In
- Contains No Slippery/Hazardous Glycol
- Reduces Engine Temps By Up To 100° F
- 100% Water-Based Formula
- Maximizes Horsepower and Torque
- No Freeze Protection – Maximum Cooling
- Non Toxic and Biodegradable
- Blended with Chemically Stable Reverse Osmosis Water

VP-STAYFROSTY-R4 3.78L (1 Gallon)

REDLINE PETROL ENGINES

WATER WETTER

- Unique agent for cooling systems that doubles the wetting ability of water
- Rust and corrosion protection allows for use of straight water in racing or reduced antifreeze levels in warm climates • Improves heat transfer and reduces cylinder head temperature • May allow more spark advance for increase power and efficiency
- Use one bottle for most passenger cars and light trucks, treats 3 to 5 gallons or 13.2 to 15.9 liters. Vehicles with larger cooling systems should use two bottles. Small cooling systems should use 1oz (3 to 4 capfuls) per quart • Compatible with new or used antifreeze (including DEX-COOLTM and long-life versions) to improve the heat transfer of ethylene and propylene glycol systems
- Satisfies ASTM D2570 and ASTM D1384 corrosion tests for glycol-based antifreezes Reduces or eliminates bubbles or vapor barrier that form on hot metal surfaces to reduce coolant temperatures by up to 20°
- Superior heat transfer properties compared to glycol-based antifreeze • Compatible with new or used antifreeze (including DEX-COOL and long-life versions) to improve the heat transfer of ethylene and propylene glycol systems • Improves heat transfer and reduces cylinder head temperature • Designed for use with all modern aluminum, cast iron, copper, brass and bronze cooling systems • Cleans and lubricates water pump seals
- Reduces cavitations and complexes with hard water to reduce scaling • Does not lower cooling system below the thermostatically-controlled temperature

Description
Water Wetter Additive 12 oz (354 ml)
Water Wetter Additive ½ Gallon (1.90 Liters)

Part No.
RED80204
RED80205

REDLINE DIESEL ENGINES

WATER WETTER

- Designed for heavy-duty diesel engines which use more than 33% antifreeze or a supplemental corrosion package • Similar properties and benefits to regular WaterWetter, but lacks rust and corrosion inhibitors • Diesel road cars and light trucks (equipped with Cummins, Duramax, and PowerStroke engines) should use regular WaterWetter to ensure proper rust and corrosion protection • Typical diesel commercial vehicle requires one bottle, treats up to 15 gallons Reduces or eliminates bubbles or vapor barrier that form on hot metal surfaces to reduce coolant temperatures by up to 20°
- Superior heat transfer properties compared to glycol-based antifreeze • Compatible with new or used antifreeze (including DEX-COOL and long-life versions) to improve the heat transfer of ethylene and propylene glycol systems
- Improves heat transfer and reduces cylinder head temperature
- Designed for use with all modern aluminum, cast iron, copper, brass and bronze cooling systems
- Cleans and lubricates water pump seals
- Reduces cavitations and complexes with hard water to reduce scaling
- Does not lower cooling system below the thermostatically-controlled temperature

Description
Water Wetter Additive 15 oz (443 ml)

Part No.
RED80213

REDLINE FUEL SYSTEM WATER REMOVER & ANTIFREEZE

- Removes water from diesel or gasoline systems, treats up to 250 gallons
- Significantly reduces the freezing point of water in the fuel system
- Also provides excellent fuel lubrication
- Can be used in combination with SI-1 Complete Fuel System Cleaner, Diesel Fuel Catalyst, and 85 Plus

Description Water Remover Additive 12 oz (354 ml)
Part No. RED60302

Contact Cleaner

VHT Electric Contact and Spark Plug Cleaner is formulated for cleaning complex electrical components used in today's automobiles. The potent mixture of high strength solvents removes most carbon deposits and contaminants instantly. It dries in seconds, leaving no residue.

Contact Cleaner VHTSP24

Electrical Cleaner

CO Cleaner is an effective solvent based electrical contact cleaner used for most industrial applications to remove grease, oils, dust, moisture, pigments, & foreign materials.

Contact Cleaner 480ml Aerosol Can TB6602CO

CLEANERS & DEGREASERS

AIR FILTER CLEANING PRODUCTS

AeroFlow air filter cleaning kits are the best way to keep your cotton filters clean and recharged for optimum clean air flow to your engine. By using the cleaner to wash away all the dirt and grime and then re-oiling you can maintain your AeroFlow filter for years. Can be used on most types for cotton filters oil is clear in colour.

AeroFlow air filter cleaning kit contains 295ml (10oz) oil pump style 295ml (10oz) cleaner pumps style
AF2000-5050

AIR FILTER CLEANERS & OILS

Re-charger Filter Care Service Kit (Aerosol)

Re-charger Filter Care Service Kit (Aerosol)
A six-step maintenance system designed to recharge any K&N Filtercharger Air Filter. Restores air flow efficiency so your Filtercharger performs like new. Includes: Spray Oil (190ml), Filter Cleaner (355ml) and Service Decal
Aerosol Filter Re-charger Kit KN99-5000

Re-charger Filter Care Service Kit (Squeeze)

This kit is the same as KN99-5000 except it has a squeeze oil bottle instead of spray can which makes it suitable to send by air freight. Includes: Squeeze Oil (237ml), Filter Cleaner (355ml) and Service Decal
Squeeze Filter Re-charger Kit KN99-5050

K&N Filtercharger Oil

K&N Air Filter Oil is the only oil specially formulated to work in combination with the cotton fabric in K&N Filtercharger elements providing a superior air filtration system. When used as directed, it quickly penetrates the filter pleats, where it remains suspended in the cotton fabric. Saturation is maintained until the element is cleaned with K&N Air Filter Cleaner.

Filter Oil Aerosol Can (190ml) KN99-0504
Filter Oil Aerosol Can (355ml) KN99-0516
Filter Oil Squeeze Bottle (237ml) KN99-0533
Filter Oil Re-Fill Bottle (3.78 Litre) KN99-0551
Filter Oil Re-Fill Bottle (19 Litre) KN99-0555

K&N Cleaner/Degreaser

K&N Air Filter Cleaner is the only cleaner formulated to clean K&N Filtercharger elements. The use of any other cleaning solution can void the filter's warranty, and quite possibly could damage the cotton material. K&N Cleaner works to dissolve the dirt build up and old filter oil, and can be washed away with water. Complete instructions on bottle. NOTE: Do not use on polished or anodized aluminium.

Cleaner/Degreaser Squirt Bottle (355ml) KN99-0606
Cleaner/Degreaser Squirt Bottle (946ml) KN99-0621
Cleaner/Degreaser Re-Fill Bottle (3.78 Litre) KN99-0635
Cleaner/Degreaser Re-Fill Bottle (19 Litre) KN99-0640

K&N Sealing Grease

K&N Sealing Grease provides an airtight fit around sealing surfaces on all types of air filter elements. It resists heat and will not melt or run off. K&N sealing grease is not to be used on clamp-on filter elements.

Sealing Grease (177ml) Tube KN99-0704

Hand Cleaner

Bring It Hand Cleaner is a "Highly Effective" industrial hand cleaner suitable for all workshops, mechanical and heavy industrial locations. Removes ink, grease, oil and heavy soiling while leaving hands fresh and clean. Contains Citrus oil and scrubbing agents for maximum cleaning power with a non-abrasive feel.

1 Litre Bottle with Pump.....BI-HC1
5 Litre Bottle with Pump.....BI-HC5
20 Litre Bottle with Pump.....BI-HC20

SPRAY ADHESIVE

Thermo-Tec Heavy-Duty Spray Adhesive

Heavy-Duty Spray Adhesive is the answer when you need a quick-drying, long-lasting spray adhesive in a high temperature application. Extra-strong contact-style adhesive sets quickly, lasts even in high-temperature situations. Commonly used with Thermo-Tec Insulating products but it also has many other applications.

Heavy Duty Spray Adhesive (473ml) TT12005

BLOCK FILLER

Moroso Engine Block Filler

Moroso Engine Block Filler helps prevent thin cylinder walls from cracking and improves ring seal by keeping cylinders round and also dampens unwanted vibrations. It has expansion rate very similar to cast iron. Just fill with water, mix and pour into block before machining. Supplied in 1 Gallon jugs, most engines require 4 jugs.

Engine Block Filler - 1 Gallon Jug M035571

Hard Blok Water Jacket Filler

Hard Blok is a specially formulated, cement-based product with refined, size-graded iron particles combined at an optimum ratio to provide maximum strength, vibration dampening, and heat dissipation required in high performance race engines. Its coefficient of thermal expansion is identical to cast iron engine blocks and it has been tested and proven effective in aluminium blocks. One tall fill unit will fill most big blocks to the bottom of the water pump connection. In certain tall deck blocks, the fill level may be an inch or so lower. This level is adequate to stiffen the cylinder walls. Order the tall fill unit for 350 cubic inch and larger blocks. Order the short fill unit for circle track and street rod applications.

Hard Blok - Short Fill (12.25lb) HB880212
Hard Blok - Tall Fill (28lb) HB880228

PIN STRIPING PAINTS & ACCESSORIES

Pinstriping Starter Kit

Are you curious about those pinstripes you see everywhere? Got that itch? Not sure where to start? Well, here it is! The MOONEYES Original Pinstriping Starter Kit. The core base to any pinstriper's toolbox is right here. This special set has been put together as an original starter kit by Mooneyes and includes the following:

- 5 x 1-Shot Paint Colors
- #101 (Lettering White)
- #132 (Lemon Yellow)
- #153 (Process Blue)
- #163 (Magenta)
- #199 (Lettering Black)

- 4 x Brushes
- MACK Brush #0
- MACK Brush #00
- Lettering Brush #4
- Lettering Brush #6

Brushes & Oils

MACK Brush Series 20 (6 Size Brush Kit)
MNIG091

Wall Dog Brush Preserving Oil

PAINTS & FINISHES

VHT Engine Enamel

VHT Engine Enamels are available in a wide range of colours, including exact match factory colours. All colours have excellent durability and superior heat and solvent resistance. They are specially formulated to withstand corrosion, rust, salt spray, strong solvents and additives of today's gasoline blends and degreasers. Rated to 287°C, they are ideal for use on engines, heat registers, hot pipes, farm and garden equipment, boats, motorcycles and watercraft.

Engine Enamel (Aluminium) VHTSP127
Engine Enamel (Bright Red) VHTSP121
Engine Enamel (Gloss Black) VHTSP124
Engine Enamel (Satin Black) VHTSP139
Engine Enamel (Chevy Orange) VHTSP123
Engine Enamel (Holden Blue) VHTSP1202
Engine Enamel (Holden Orange) VHTSP119
Engine Enamel (Hemi Orange) VHTSP120C
Engine Enamel (Chrysler Blue) VHTSP136A
Engine Enamel (Ford Dark Blue) VHTSP125
Engine Enamel (Ford Light Blue) VHTSP134
Engine Enamel (Ford Competition Blue) VHTSP755
Engine Enamel (White) VHTSP129
Engine Enamel (Light Grey Primer) VHTSP148
Engine Enamel (Ford Red) VHTSP152

VHT Nu-Cast Engine Enamel

VHT Nu-Cast Engine Enamels are unique formulas developed to restore OEM parts to their original newly cast appearances. These Cast Aluminium and Iron Grey coatings withstand temperatures to 500°F (287°C) and are extremely resistant to chemicals, salt, corrosion and rust.

Nu-Cast Engine Enamel (Cast Aluminium) VHTSP995
Nu-Cast Engine Enamel (Cast Iron Grey) VHTSP997

VHT Brake Caliper, Drum & Rotor Paint

VHT Brake Caliper, Drum and Rotor Paint has been specifically designed for the custom detailing of brake components. It is heat resistant to 900°F (482°C) and will not chip, crack, fade or rust even under extremes of operation or road and weather conditions. It is easy to apply, dries quickly, and is remarkably resistant.

Careful preparation is essential.

Brake Caliper, Drum & Rotor Paint (Clear) VHTSP730
Brake Caliper, Drum & Rotor Paint (Racing Red) VHTSP731
Brake Caliper, Drum & Rotor Paint (Bright Blue) VHTSP732
Brake Caliper, Drum & Rotor Paint (Real Orange) VHTSP733
Brake Caliper, Drum & Rotor Paint (Gloss Black) VHTSP734
Brake Caliper, Drum & Rotor Paint (Cast Alum.) VHTSP735
Brake Caliper, Drum & Rotor Paint (Bright Yellow) VHTSP738
Brake Caliper, Drum & Rotor Paint (Satin Black) VHTSP739

VHT Flameproof Coating

This unique coating is a matte finish, ceramic base silicone widely used by the automotive industry on exhaust systems and the aerospace industry for jet engines and other high temperature applications. VHT FlameProof Coating will withstand temperatures up to 815°C (1500°F) and is ideal for use on boilers, hot water pipes, exhaust systems, franklin stoves, heaters, barbecues, furnaces or wherever an extreme temperature coating is needed.

FlameProof Coating (Flat White)	VHTSP101
FlameProof Coating (Flat Black)	VHTSP102
FlameProof Coating (Flat Silver)	VHTSP106
FlameProof Coating (Cast Iron Grey)	VHTSP998

VHT Chassis/Roll Bar Paint

VHT epoxy plus with rust inhibitor for use on roll bars, bumpers, chassis & grill guards is a custom formulated one step epoxy ester system for use on woods or metal and most fibreglass surfaces. This paint produces a durable, porcelain-hard finish and is self priming.

Chassis/Roll Bar Paint (Gloss Black)	VHTSP670
Chassis/Roll Bar Paint (Satin Black)	VHTSP671

VHT Prime Coat

VHT Prime Coat is an excellent foundation for any enamel, epoxy, acrylic or synthetic lacquer. It provides a tough, air dry base coat with excellent adhesion to intermediate and top coatings. VHT Prime Coat is specially formulated to fill scratches or pin holes caused by sanding or body fillers to form a strong corrosion barrier. It is a multi-purpose product, and can be used on metal, fibreglass, masonry, wood and most plastic surfaces. It is ideal for automotive, marine, aviation, home, farm and industrial use.

VHT Prime Coat (White)	VHTSP301
VHT Prime Coat (Dark Grey)	VHTSP302
VHT Prime Coat (Red Oxide)	VHTSP303
VHT Prime Coat (Light Grey)	VHTSP304
VHT Prime Coat (Black)	VHTSP305
VHT Prime Coat (Zinc Chromate)	VHTSP306

VHT ENGINE METALLIC

Under hood engine dress-up never looked this good, or stood up to high-heat temperatures like VHT Engine Metallic Paint. Formulated for high temperature and high-performance applications, VHT Engine Metallic Paint creates a cool sparkling metallic finish and withstands intermittent temperatures of up to 650°F (343°C). A unique formulation of urethane and ceramic resins produces a tough and long-lasting finish for engines, engine accessories, or any other surface that requires a durable, heat- and chemical-resistant finish.

Engine Metallic (Black Pearl)	VHTSP405
-------------------------------	----------

VHT QUICK COAT

VHT Quick Coat Enamel is a premium-quality coating, which provides extra hide and durability for interior or exterior applications. This tough and durable coating prevents rust and corrosion on properly prepared surfaces, and is fast drying. VHT Quick Coat Enamel provides a rich weather-resistant gloss finish to wood, metal, sealed plaster and masonry surfaces.

Quick Coat (Fire Red)	VHTSP501
-----------------------	----------

VHT EPOXY ALL WEATHER PAINT

VHT Epoxy Paint is a one-step epoxy coating, which does not require the use of a primer. It has been formulated to give the appearance and durability of a baked-on finish. It provides a porcelain-like finish that is chemical, corrosion, rust and salt resistant.

VHT Epoxy (Gloss Black)	VHTSP650
-------------------------	----------

VHT HIGH TEMPERATURE

PLASTIC PAINT

VHT High Temperature Plastic Paint is formulated for high-heat applications on plastic and withstands temperatures up to 200 °F (93 °C). This product was developed to adhere directly to automotive grade plastics without the need for sanding or a plastic adhesion promoter. VHT High Temperature Plastic Paint is ideal for painting engine covers & components and can be used on interior and exterior plastics. It is resistant to oil and other automotive fluids and will not flake, chip or peel.

High Temp Plastic (Matte Black)	VHTSP820
High Temp Plastic (Gloss Red)	VHTSP821
High Temp Plastic (Gloss Blue)	VHTSP822
High Temp Plastic (Gloss Orange)	VHTSP823
High Temp Plastic (Aluminium)	VHTSP824

VHT Wheeley Bar Chalk Spray

Determine your chassis and clutch adjustment with VHT wheeley bar chalk. It is has been developed to replace that old, messy shoe polish. This unique, easy-to-clean aerosol coating is a must for any drag racer using wheeley bars. It's simple—shake the can, and just spray on the VHT wheeley bar chalk.

Wheeley Bar Chalk Spray	VHTSP168
-------------------------	----------

VHT Hood & Bumper Paint

VHT Hood and Bumper Paint accents the latest automotive styling and matches original factory equipment. This satin black urethane coating is extremely flexible, yet resists chipping and fading. The easy to use spray application creates a tough durable finish with excellent mark and scratch resistance.

Hood & Bumper Paint (Satin Black)	VHTSP27
-----------------------------------	---------

SILICONE HOSE

Z-BEND SILICONE HOSE

Aeroflow Universal Z Bend Silicone Hose are can be configured into the various forms demanded by today's complicated and cramped engine bays. They can also be used in many industrial applications. These flexible hoses feature a 90-degree bend and a 135-degree bend ensuring multi-fit applications.

- Constructed from a 3 Ply Nomex hose
- Excellent ply adhesion from the inner core to the outer layers.
- Bright gloss finish
- Not recommended for use with oil and fuel.
- Weather resistance to: harsh sunlight, dry conditions and rain water.
- Working temperature -60 to +180 Celsius (-75 to +350 Fahrenheit).
- Wall thickness 5mm 13/64"

REINFORCED HEATER SILICONE HOSE

The Aeroflow Performance silicone heater hose is now stronger and more flexible than ever before. Thanks to the wire helix reinforcement to prevent collapse in tight bends or in vacuum applications. This construction provides superior flexibility for easy routing for installation in multiple applications.

SILICONE HOSE

Aeroflow designs and manufactures premium quality silicone hose for the Performance Automotive Industry, Transport Industry and Industrial applications. Whether it's silicone heater hose, vacuum or high temperature silicone turbo hose, Aeroflow has the right products for your demanding applications. • Huge Range • Bright gloss finish • Working temperature -60 to +180 Celsius (-75 to +350 Fahrenheit) • 4 Ply hose have a wall thickness 4.5mm wall and 5 ply have a wall thickness of 5.3mm • Excellent ply adhesion from the inner core to the outer layers • Weather resistance to: harsh sunlight, dry conditions and rain water • Not recommended for use with oil and fuel • Great retail packaging for easy display and product protection
Note: Leg sizes are approximate and may vary.

METRIC VACUUM

BLANK OFF PLUGS

Aeroflow's vacuum cap assortment kit is made from high quality silicone for durability. Able to withstand high under bonnet/hood temperatures. The kit includes 8 x 4mm, 4 x 6mm, 2 x 8mm, and 2 x 10mm.

AF9090-016-01	Blue Finish	Pack of 16
AF9290-016-01	Black Finish	Pack of 16

SILICONE HEATER HOSE CAP

The Aeroflow reinforced silicone heater block off caps is designed for coolant, water, air, vacuum ports, throttle body water ports, heater cores, and much more. While they look a lot like traditional vacuum caps, the internal material is designed specifically to be installed on your cooling system. The block off caps are manufactured just like our reinforced silicone heater hoses. With 3 layers of polyester webbing for reinforcement, you can be sure that they will withstand the high temperatures and pressures of your cooling system for years to come. These silicone block off caps are not compatible with fuel, oil, or any petroleum-based products.

VACUUM PORT ADAPTER

Aeroflow's soft mount vacuum line fitting are designed to be inserted into a silicone hose. Simply punch an 8mm (5/16") hole into the silicone connector and install. Each kit includes a CNC machined aluminium fitting, lock nut, washer and O-ring seal. For use with Aeroflow 6mm (1/4") I.D. vacuum hoses. This fitting is designed to seal perfectly for all different silicone hose wall thicknesses.

CONSTANT TENSION CLAMP

Sold Individually

Aeroflow Performance dual bead constant tension stainless steel hose clamps are the most cost effective way to ensure a consistent seal on your hoses without damage. The inner dual bead design puts band-sealing pressure where it is needed, providing 30 percent more sealing performance than standard worm drive clamps. This allows superb sealing characteristics and is safe for all soft hose uses such as air to air and coolant applications. Torque setting 35-45in.lbs. (4.0 - 5.1Nm). Clamp width 12.7mm (1/2").

AERO CLAMP PLIERS

Aero clamps are recommended for extra clamping on push lock hose used in high pressure and heat applications. This tool aids in the installation and removal of all sized Aero clamps. Fits and removes all Aero clamps **AF98-2024**

AERO CLAMPS

Aero clamps are recommended for extra clamping on push lock hose used in high pressure and heat applications. 5 different sizes available.

Suits 400 Series Hose

Part No	Description
AF444-04	Suits -4 & -5 push lock hose
AF444-06	Suits -6 push lock hose
AF444-08	Suits -8 push lock hose
AF444-10	Suits -10- push lock hose
AF444-12	Suits -12 push lock hose

Suits 500 Series Hose

Part No	Description
AF545-04	Suits -4 & -5 push lock hose
AF545-06	Suits -6 push lock hose
AF545-08	Suits -8 push lock hose
AF545-10	Suits -10- push lock hose
AF444-12	Suits -12 push lock hose

HOSE TOOLS

Hose Cutting Shears

Great for cutting all styles of Aeroflow hose including braided and rubber.

Part No	Description
AF98-2015	Cuts -3 up to -20 Hose

200 Series Hose Cutter

This ultra-sharp hand held cutter has been designed to use on our 200 series hose. These cutters will not leave residue as other methods of cutting does.

Part No	Description
AF98-2016	Cuts -3 and -4 200 series teflon hose

PVC BREATHER HOSE & FITTINGS

Note: Push-on fittings available to suit 1" and 1-1/2" clear PVC hose.

REINFORCED CLEAR PVC BREATHER HOSE

Aeroflow's new range of transparent PVC hoses are reinforced with a steel wire core to prevent kinking and collapsing. These hoses are great for Breather, Overflow and Water lines where you want to see exactly what's going on inside. Available in 9.525mm (1/2"), 15.875mm (5/8"), 19.05mm (3/4"), 25.4mm (1"), 38.1mm (1-1/2"), 44.45mm (1-3/4") and 50.8mm (2") inside diameter sizes from 1m (3ft 3-3/8") to 15m 49ft 2-9/16" lengths. Operating temperature 5°C (41°F) to 70°C (158°F)

500 SERIES PUSH LOCK HOSE (suits 400 & 510 series hose ends)

Aeroflow 500 series push lock hose is designed for the use with our push-on fittings. Available in black ONLY. Constructed from an outside layer of chlorinated polyethylene (CPE). This withstands higher temperatures and better weather resistance with an oil resistant, tough textured outer cover. Nylon reinforced to provide strength whilst keeping the flexibility in the hose. Approved for use with leaded and unleaded gasoline, diesel and gasoline blends of ethanol (E85), methanol, petroleum oils, lubricants, coolant systems, low pressure brake / clutch reservoirs line, low pressure power steering lines and transmission cooler lines.

- Temp range -40°C (-40°F) to 125°C (257°F)
- Working pressure 290 PSI (20 BAR)

NOTE: CLAMPS MUST BE USED ON ALL APPLICATIONS OVER 60°C (140°F) AND OVER 60 PSI OF PRESSURE.

NOT SUITABLE FOR ANY SUBMERSIBLE APPLICATIONS.

Note. Due to the use of unknown additives in some fuels, we are unable to guarantee our rubber hoses compatibility with all fuels unless otherwise stated.

We recommend the use of Aeroflows PTFE series hose for all other types of fuels.

400 Series Hose (Suits 400 & 510 Series Hose Ends)

Aeroflow 400 series push lock hose is designed for the use with our push-on fittings. Available in black and blue.

- Suitable for coolants, oil, air, E85, E10 and methanol.
- Where Temperature exceeds 70°C or 60PSI you **MUST** use a clamp
- Temp range -40°C to 100°C

NOTE: ON OILING SYSTEMS AND ON ALL EFI FUEL SYSTEMS CLAMPS MUST BE USED TO SECURE HOSE ENDS. NOT SUITABLE FOR SUBMERSIBLE APPLICATIONS USING UNLEADED FUELS.

Note. Due to the use of unknown additives in some fuels, we are unable to guarantee our rubber hoses compatibility with all fuels unless otherwise stated.

We recommend the use of Aeroflows PTFE series hose for all other types of fuels.

NOTE: Use Aero clamps to secure hose to fittings. NOT FOR USE WITH POWER STEERING OR TRANSMISSION & OIL COOLER LINES

450 Series Black Braided Light Weight Hose (suits 100, 150, 500, 550 & 880 series fittings)

Note: Use inner coil support spring on all tight radius bends and inlet / suction side of any pump.

The Aeroflow 450 Series hose is for performance and racing enthusiasts who want high quality light weight hose that is easier to assemble than traditional braided steel hose. • Constructed with a braided nylon outer shield for abrasion resistance.

- A Flexible stainless steel inner core for superior strength embedded in the Chlorinated Polyethylene (CPE) synthetic rubber liner.
- For use with fuel systems, E85, E10, methanol, oils, lubricants, coolant systems and vacuum applications.
- Minimum temperature -40°C (-40°F), Maximum temperature 150°C (302°F).

Note. Recommended for pump fuel. Due to the use of unknown additives in some fuels, we are unable to guarantee our rubber hoses compatibility with all fuels. We recommend the use of Aeroflows PTFE series hose for all race blend fuels.

NOT RECOMMENDED FOR: Brake systems, transmissions, power steering, extreme heat areas and use inside passenger compartments (due to permeation). For these applications use 200 Series Hose

HOSE AND FITTINGS

Note: Use inner coil support spring on all inlet / suction side of any pump.

Note: Please ensure all hose is thoroughly cleaned out before use.

100 SERIES STAINLESS STEEL BRAIDED HOSE

The AeroFlow 100 series hose is a true double braided stainless hose that uses the highest quality stainless wire available.

- Constructed with a stainless steel outer braid that resists abrasion and corrosion.
- Combined with a reinforced Chlorinated Polyethylene (CPE) synthetic rubber liner with a nylon inner braid.
- For use with fuel systems, E85, E10, methanol, oils, lubricants, coolant systems and vacuum applications.
- Minimum temperature -40°C, Maximum temperature 150°C.

Note: Due to the use of unknown additives in some fuels, we are unable to guarantee our rubber hoses compatibility with all fuels unless otherwise stated.

We recommend the use of AeroFlows PTFE series hose for all other types of fuels.

NOT RECOMMENDED FOR: Brake systems, transmissions, power steering, extreme heat areas and use inside passenger compartments (due to permeation). For these applications use 200 Series Hoses & compatible fittings.

The AeroFlow 200 series hose has a PTFE inner liner with 308 stainless steel braid. It is a durable and professional hose that resists leaks and fumes. It is rated to up to 4000PSI (275.79Bar).

- Stainless steel outer cover for excellent abrasion resistance.
- Recommended for Brake, E85, Alcohol, Nitro, transmission, clutch, nitrous, power steering, oiling, hydraulics & vacuum applications.
- Minimum temperature -70°C (-94°F), Maximum temperature 250°C (482°F).

Note: Please ensure all hose is thoroughly cleaned out before use.

AEROFLOW THREAD PASTE

AeroFlow's Aero Seal thread sealing paste contains PTFE to assist in sealing and avoid binding of threads. Recommended for use with all threaded fasteners and adapters in aluminium, steel, stainless steel and plastic. Aero Seal is an anaerobic paste that remains liquefied until installation to provide a positive seal and can be used in temperature ranges from -58° to 400°F / -50° to 204°C. Sold individually or in 12 piece bulk packs.

AF98-2023 AeroFlow thread paste 50ml squeeze tube
AF98-2023-12 Bulk 12 pack of AeroFlow thread paste 50ml tubes

200 Series PTFE (teflon®) stainless steel coated braided hose

With our brake line program AeroFlow now have a coated PTFE (Teflon) -3 hose. This high quality stainless hose has a PVC coating on it. It's available in Black and Clear and was designed to use with our ADR brake lines. It can also be used with our 200 series fittings.

PTFE (Teflon®) Hose Installation Tool

Assists in separating Teflon inner liner from braided outer for fitting installation on teflon braided hose.

Part No Description
AF98-2043 Suits -3, -4, -6 and -8 PTFE Hose

Non-Stick Cutting Film

AeroFlow's non-stick cutting film is an easy and cost effective way for a neat cut every time of Kevlar or Nylon braided hose. No more struggling with sliding the socket nut over the frayed cloth braid, simply slide the nut over before removing the tape. This handy kit comes with 50m (164ft 1/2") of clear non-stick cutting film and 2m (6ft 6-3/4") of white PE film that can also be used on stainless braided hose.

AF98-2049

Kryptalon® & 400 Series Hose Cutter

No more wasting time and hose with nasty unclean cuts, simply line up hose at 90 degrees to get a clean cut every time. Can be used with AeroFlow's Kryptalon® series and 400 series hoses. The advantage of our cutter is the blade is dual functioning, simply rotate the blade when blunt. Cutter also supplied with spare blade.

AF98-2052 Kryptalon®, 400 Series Hose Cutter
AF98-2053 Hand held cutter replacement 5 pack of blades that works out to be 10 when you include the rotation.

250 Series PTFE (Teflon®) Black Braided Hose

AeroFlow's 250 Series hose is a durable, professional light weight option that resists leaks and fumes. It is constructed from a PTFE inner liner, with a reinforced 308 Stainless Steel layer wrapped in a black nylon outer braid for maximum appearance and abrasion resistance.

• Stainless Steel reinforced middle layer for maximum strength and burst pressure.
 • Braided Nylon outer shield for abrasion resistance. • Recommended for brake, E85, Alcohol, transmission, clutch, Nitrous, Power Steering, Oil, Hydraulics and Vacuum applications. • Minimum Temp -70°C (-94°F), Maximum Temp 200°C (392°F).

Kryptalon®

ULTIMATE LIGHT WEIGHT HOSE TECHNOLOGY

ULTRA-LIGHT FLEXIBLE KEVLAR BRAIDED HOSE

AeroFlow's new Kryptalon® series ultra-light flexible Teflon® kevlar braided hose & billet big-bore lightweight fittings have been engineered for extreme racing conditions, where every gram counts and reliability is king. AeroFlow's lightest hose combines a woven Kevlar braid with an internal smooth bore Teflon liner for greater flow capacity, with a convoluted outer for astonishing flexibility. It also has significantly higher flow and pressure ratings than conventional convoluted Teflon hose.

AeroFlow's new Kryptalon® Series smooth bore design eradicates boundary layer entrapment and flow disruption for performance you can count on! The Teflon liner hose has a large range of applications, fuels including E85, E10, methanol, oils, lubricants, coolant systems. Available in -4 to -16 (with -20 coming soon) sizes in 1, 2, 3, 4.5, 6, 15 and 30 metre lengths. For a clean cut, you must use AeroFlow's Non-Stick Cutting Film (AF98-2049).

With NO special tools required to assemble, Kryptalon hose & fittings have been developed to flow more, be lighter and excel in hard core performance environments but are still easily assembled in your garage or at the track. Temperature rating: -94°F to 500°F / -70°C to 260°C. Note: Use inner coil support spring on all tight radius bends and inlet / suction side of any pump.

KRYPTALON® LIGHT WEIGHT ONE PIECE SWIVEL HOSE ENDS

AeroFlow engineers have developed an innovative lightweight reusable 360° swivel hose end to work with our Kryptalon® ultra-light weight flexible kevlar hose. One piece design allows for uninterrupted flow and eliminates the extra leak points of braided multi piece fittings. Made from 6061 T6 aluminium and then hard anodised for durability, they are designed for serious racing applications where light weight is a priority but are equally at home in any application. Designed to work with the large bore of our Kryptalon® hose they have a greater flow rate than standard Teflon hose ends, giving you the best of both worlds, improved flow and light weight. Proven under the rigors of Nitro drag racing, there's no better choice when lightweight and reliability are required. Extremely easy to assemble, no special tools required. Available in black or titanium hard anodised finish.

HOSE END COVERS

Billet Specialties Hose Ends

Billet Specialties has the answer for unsightly hose clamps and loud anodized colors - polished billet hose ends! Available in popular sizes for rubber and braided hoses from 5/16" to 1-3/4". Sold individually.

- Precision machined from 6061-T6 billet aluminium
- Mirror polish finish • Hose clamp included

- BS67025** 5/16" Fuel - Braided
- BS67225** 3/8" Fuel - Rubber
- BS67325** 3/8" Fuel - Braided
- BS67425** 5/8" Heater - Rubber
- BS67525** 5/8" Heater - Braided
- BS67625** 3/4" Heater - Rubber
- BS67725** 3/4" Heater - Braided
- BS67825** 1-1/2" Radiator
- BS67925** 1-3/4" Radiator

Hex Hose Finishers

Hex Hose finishers are designed to add a completed appearance to your hoses with easy installation of a hose clamp and are available in seven great colours: blue, red, purple, silver, black, gold and chrome. Aeroflow's corrosion resistant, colour consistent, double anodised and hand polished finish adds the final touch of quality and protection.

ELITE SERIES HOSE ENDS

880 ELITE SERIES Cutter Style One Piece Full Flow Swivel Hose Ends (Suits 100 & 450 Series Hose)

Because we build cars too, we know some of our customers are tired of individually hand polishing fittings to maintain shine on their show cars and elite drivers. AeroFlow has the answer! Our new Elite Billet CNC'd full flow fittings are made from 6061-T6 Aluminium and are individually hand polished then chrome plated to give our customers a stunning elite show quality finish that is easily maintained with a simple wipe of a cloth. These fittings not only look better than anything else on the market but they perform great too as tested by top professional race teams around the country.

100 SERIES HOSE ENDS

100 SERIES TAPER HOSE ENDS

(Suits 100 & 450 Series Hose)

AeroFlow's 100 Series Taper fittings are a braised full flow fitting with a taper design that provides straight through connection with easy alignment upon assembly a tube end that compresses the hose into a purpose designed socket allowing for a leak free fitting. All angles are mandrel bent, eliminating sharp changes in direction for optimum flow. Our 100 Series fittings allows 360 Degree rotation to allow for easy adjustment making them and an excellent choice for the automotive enthusiast for use in fuel systems, cooling systems, vacuum applications and oil systems. Compatible hose: 100 Series S/S braid, 450 Series Lightweight Nylon braid

- Not compatible for power steering and automatic transmission line applications.
- Hard Anodised (excluding silver)

Hose End Sockets To Suit Taper Style - Alloy

(Suits 100 - 150 Series Fittings Only)

AeroFlow Performance offers hose end sockets separately. These sockets are for use on all of our 100 & 150 series two piece hose ends. This gives an excellent option for multiple colour combinations providing a unique combination of colours not found in other brands.

150 SERIES HOSE ENDS

150 Series Taper Style One Piece Full Flow Swivel Hose Ends (Suits 100 & 450 Series Hose)

Aeroflow's 150 Series Taper fittings are a CNC machined one piece fitting which provide uninterrupted flow. The taper design that provides straight through connection with easy alignment upon assembly a tube end compresses the hose into a purpose designed socket allowing for a leak free fitting. The tight mandrel bent radius body has superior wall thickness and a swivel head allowing 360 Degree rotation to allow for easy adjustment. Aeroflow's 150 series fittings are a must for any serious racer for use in fuel systems, cooling systems, vacuum applications and oil systems.

Compatible hose: 100 Series S/S braid, 450 Series Lightweight Nylon braid

• Not compatible for power steering and automatic transmission line applications.

• Hard Anodised (excluding silver)

500 SERIES HOSE ENDS

500 SERIES CUTTER HOSE ENDS

Aeroflow's 500 series cutter fittings are a braised full flow fitting. The billet cutter end separates the wire braid for maximum hose retention, sealing the hose for a second time which provides a greater sealing area for strength and easier assembly. Aeroflow's 500 Series fittings have a swivel head to allow easy adjustment making them an excellent choice for the automotive enthusiast for use in fuel systems, cooling systems, vacuum applications and oil systems.

Compatible hose: 100 Series S/S braid, 450 Series Lightweight Nylon braid

500 Series Cutter Style Swivel Hose Ends (Suits 100 & 450 Series Hose)

Aeroflow fittings are made from 6061 T-6 aluminium. Aeroflow fittings provide superior thread strength and smooth assembly. Aeroflow's cutter style design provides a greater sealing area for greater strength and easier assembly. Our double Viton O-ring seals provide leak free performance when used with a wide range of fluids. Aeroflow's corrosion resistant, colour consistent, double anodizing and hand polished finish adds the final touch of quality and protection you have come to expect from Aeroflow.
